Forward-looking statements

This presentation, as well as other statements made by Delphi Automotive PLC (the “Company”), contain forward-looking statements that reflect, when made, the Company’s current views with respect to current events, certain investments and acquisitions and financial performance. Such forward-looking statements are subject to many risks, uncertainties and factors relating to the Company’s operations and business environment, which may cause the actual results of the Company to be materially different from any future results. All statements that address future operating, financial or business performance or the Company’s strategies or expectations are forward-looking statements. Factors that could cause actual results to differ materially from these forward-looking statements are discussed under the captions “Risk Factors” and “Management’s Discussion and Analysis of Financial Condition and Results of Operations” in the Company’s filings with the Securities and Exchange Commission. New risks and uncertainties arise from time to time, and it is impossible for us to predict these events or how they may affect the Company. It should be remembered that the price of the ordinary shares and any income from them can go down as well as up. The Company disclaims any intention or obligation to update or revise any forward-looking statements, whether as a result of new information, future events and/or otherwise, except as may be required by law.

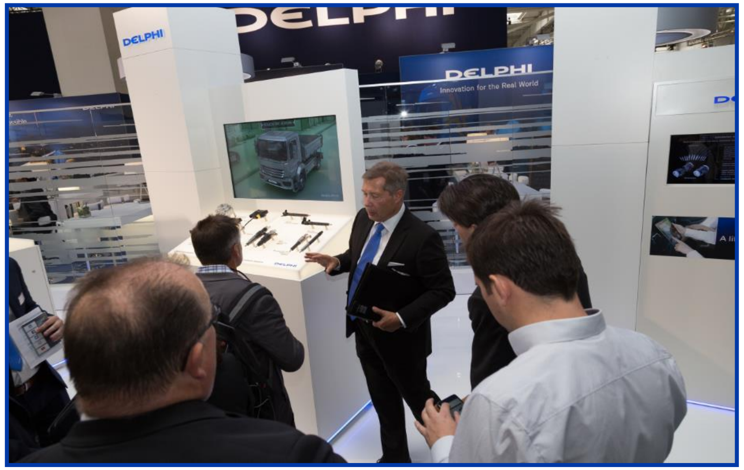
IAA Hanover 2016: “Driven by ideas”



Delphi showcases next-generation commercial vehicle technologies

Paris Auto Show focus on electrification

"Electric cars are very important for the future – if you'd like to offer sustainable mobility solutions then you need electrified products." – Automotive News

"Plans to launch more than 30 electric vehicles over the next decade, forecasting they will account for about a quarter of group deliveries by 2025." – Fortune

"Our vision of the electric market is that it is not a niche market." – Bloomberg

"We're now flipping the switch, we're ready for the launch of an electric product offensive that will cover all vehicle segments." – Bloomberg

Delphi's electrification portfolio provides innovative customer solutions

Electrification increases Delphi content per vehicle

Powertrain Management

- Supervisory controller
- Supervisory software
- Inverter
- Combined inverter/converter
- 48V Driver module

Electrical System

- 48V fusing & distribution
- High power & voltage connectors
- High voltage shielded cable
- DC/DC converter

Battery Management

- Charging inlets and cables
- Internal battery connections
- 12V battery monitor
- Battery pack controller
- On-board charger

Increasing levels of electrification

Delphi enables industry technology trends

Advanced computing platforms

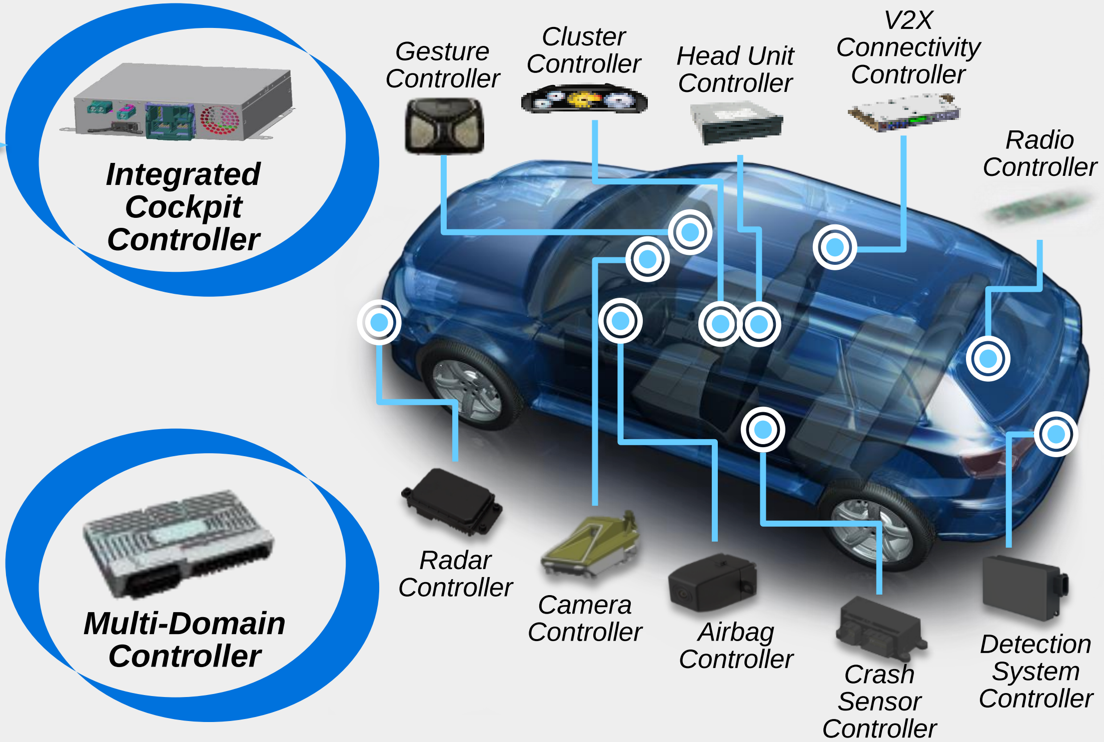
Multi-Domain Controller (MDC) | Integrated Cockpit Controller (ICC)

- **Scalable software platform**
- **Reduced architecture complexity**
- **Faster communication/interconnection**
- **Multi-processor configurations**

Production launch in 2017 & 2018

Active Safety & Infotainment functionality

Centralized sensor fusion and user experience control



Future system software optimization and upgradeability

DELPHI

Delphi and Mobileye CSLP level 4/5 platform

Mobileye's best-in-class vision (camera) systems and real-time mapping and vehicle location

Delphi's Ottomatika Automated Driving software, sensor suite, and computing platform

Mobileye's real-time mapping and vehicle location (REM™)

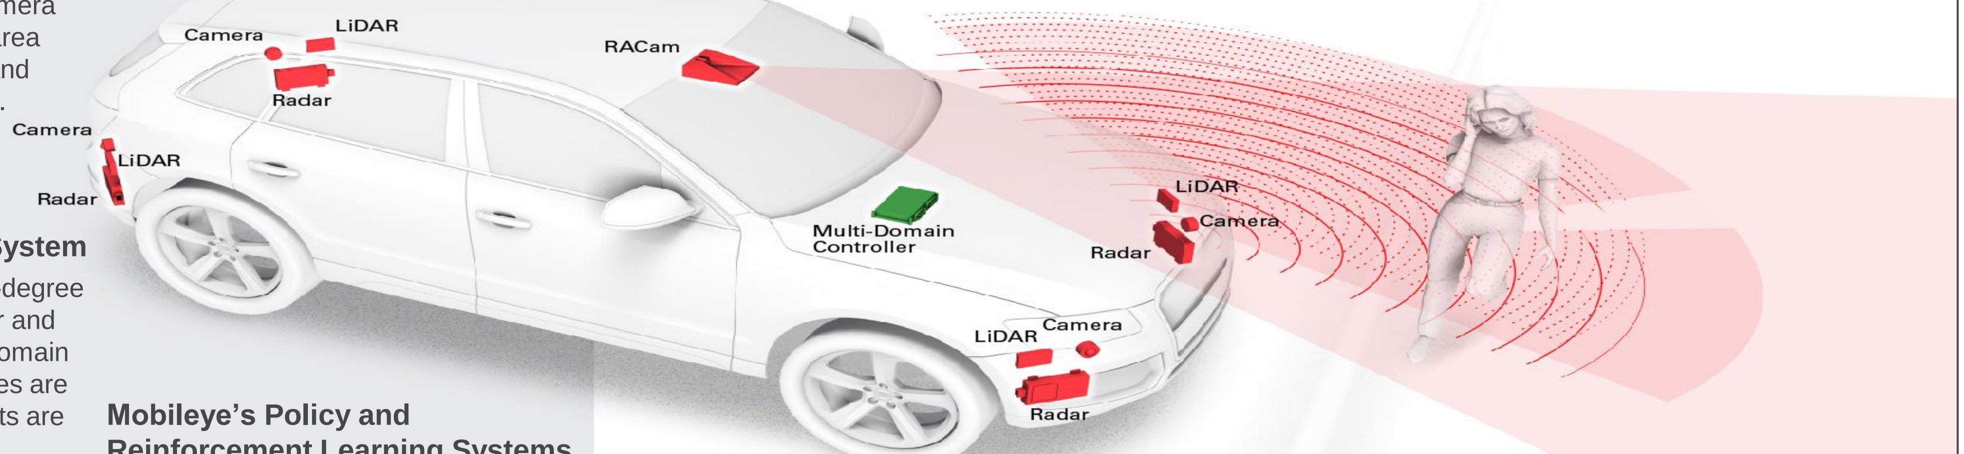
Performs detailed interpretations of camera images to map the area around the vehicle and plots a drivable path.

Delphi's Sensor Suite

Radars: Radio waves sent out and bounce off objects, like this pedestrian. The speed and distance of these objects is calculated in any weather, day or night.

LiDAR: Light pulses sent out and reflect off objects like this pedestrian. LiDAR identifies the object as a person and her distance from the car, day or night.

RACam: Combines a mid-range radar and a forward-facing camera that can see and identify the pedestrian, plus sense objects further down the road.



Mobileye Vision System

Cameras take a 360-degree image around the car and send it to the Multi-Domain Controller. The images are processed and objects are identified.

Mobileye's Policy and Reinforcement Learning Systems

Helps negotiate with other human drivers and pedestrians in complex urban scenes.

Delphi's Multi-Domain Controller

Information from the sensing systems as well as mapping and navigation data is fused to make driving decisions such as when to stop or go.

Offering a fully autonomous solution to OEMs by 2019
