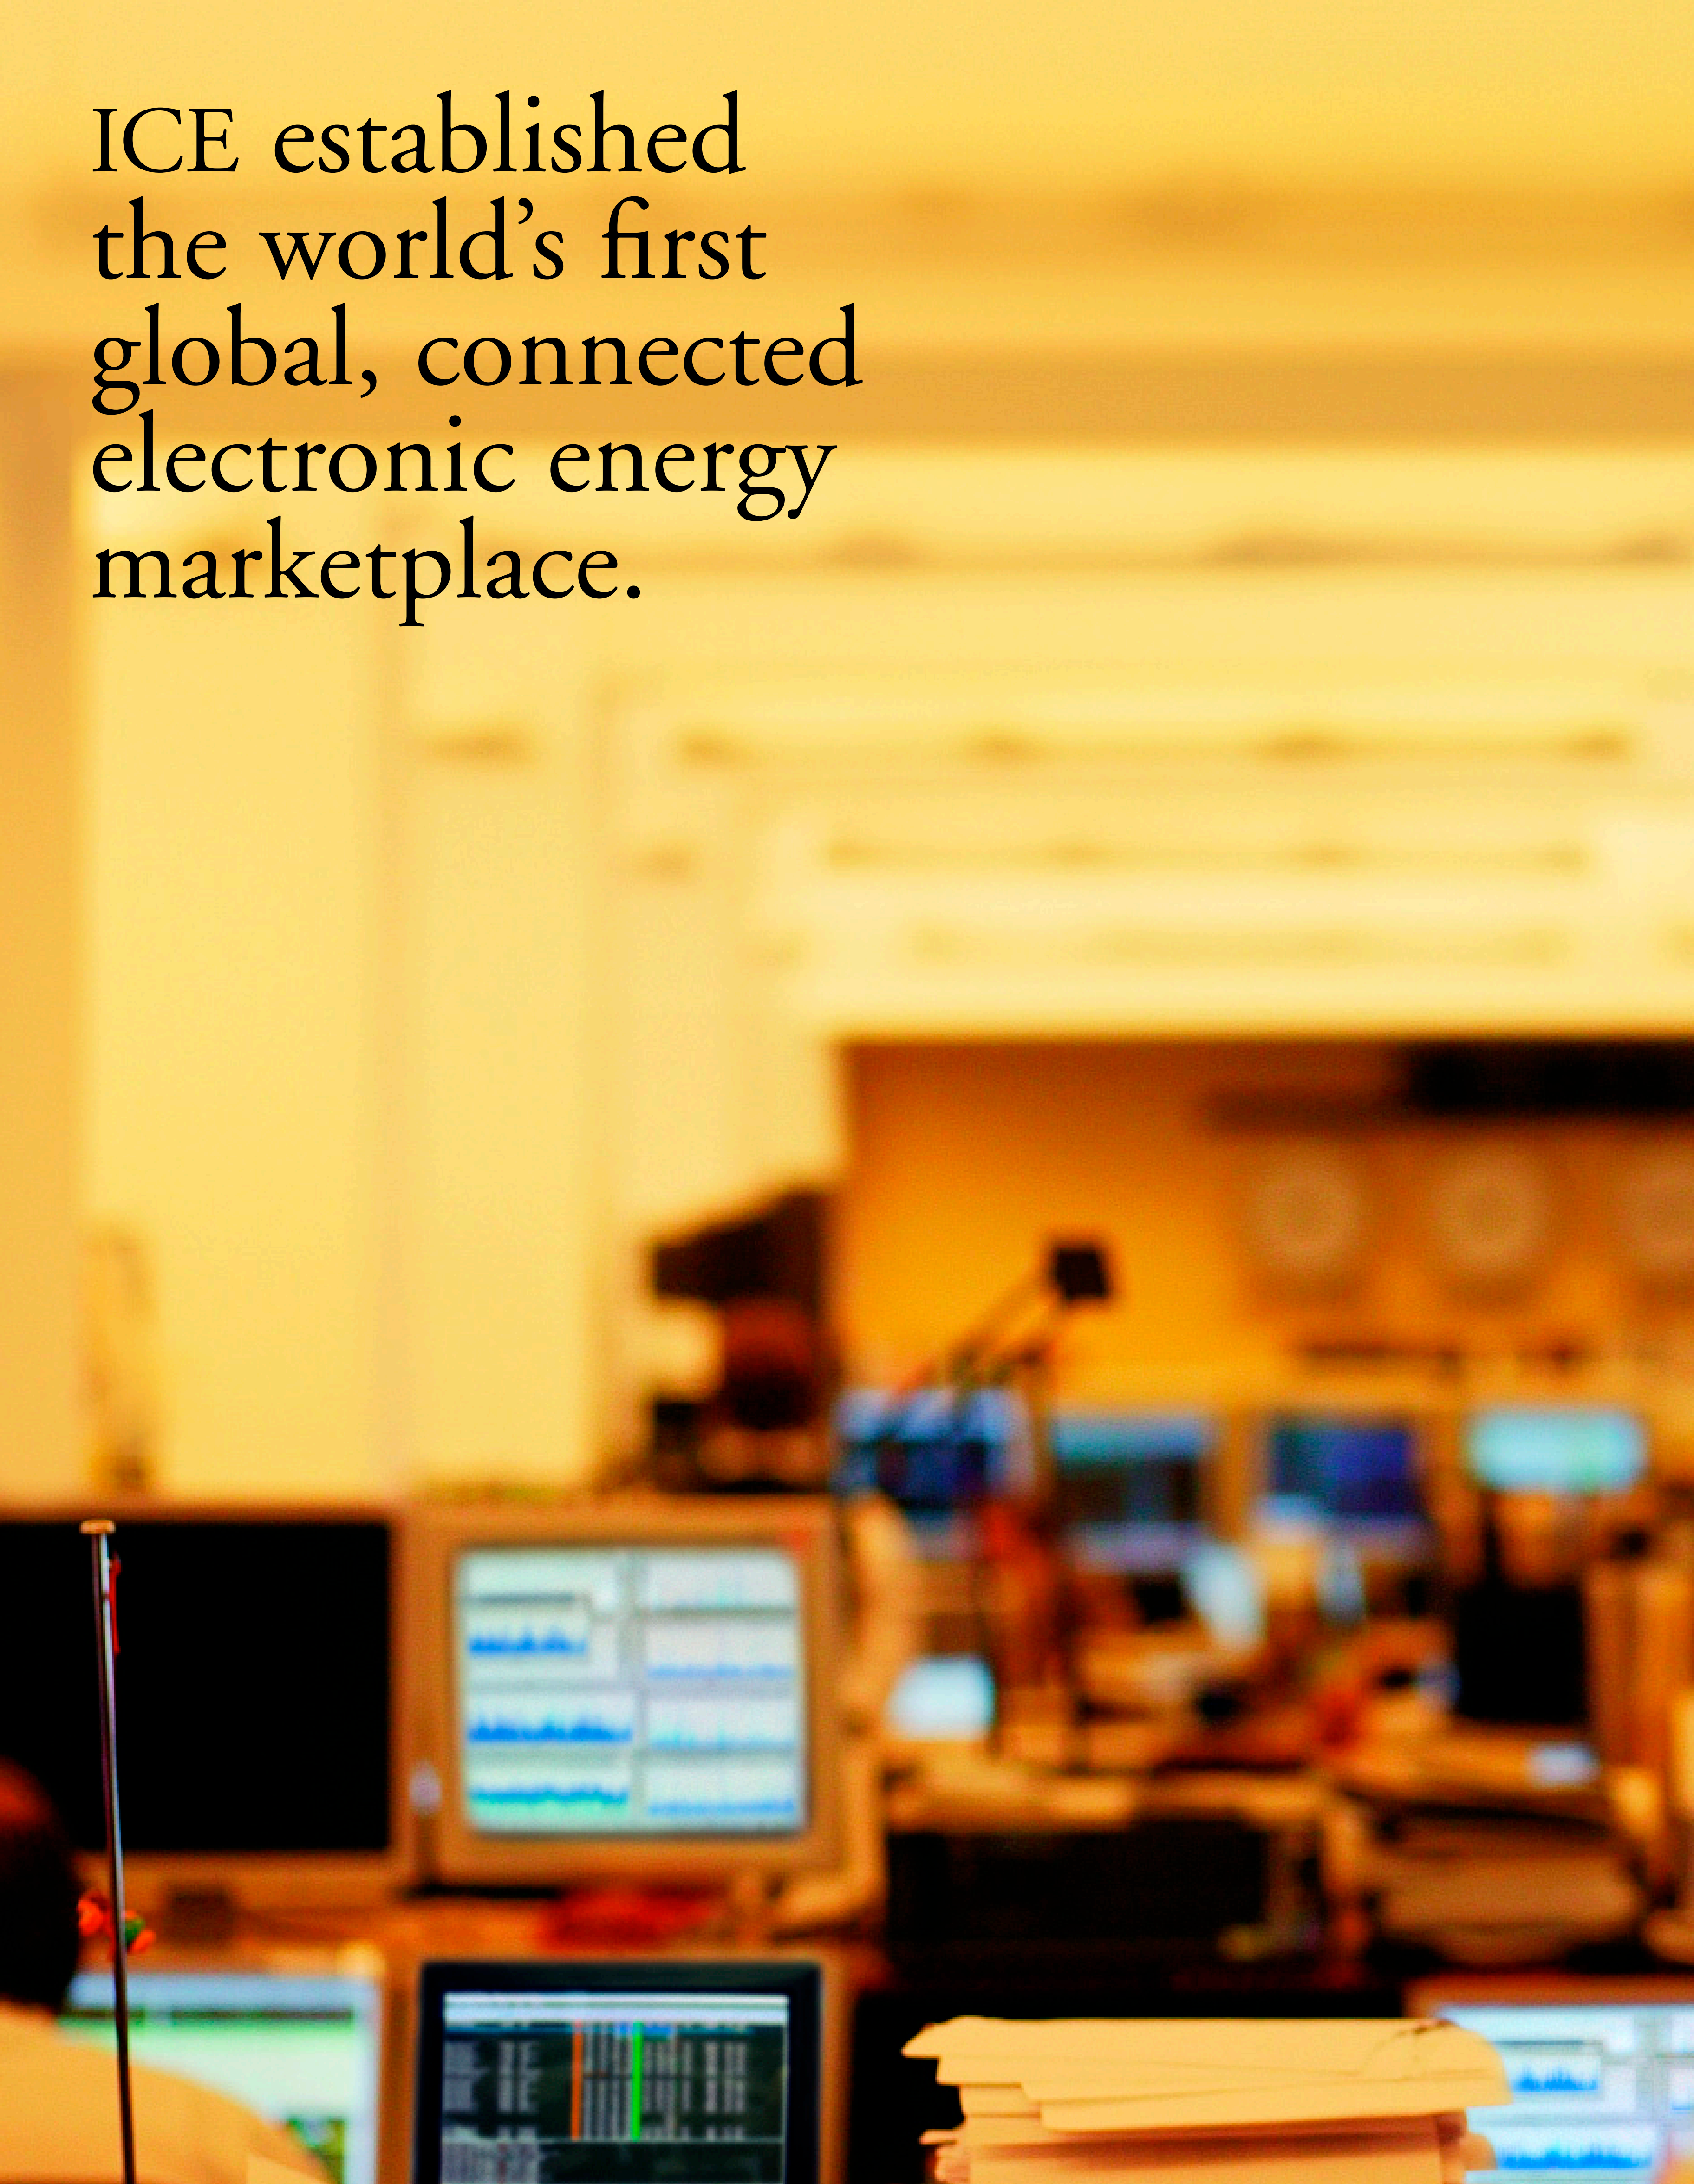
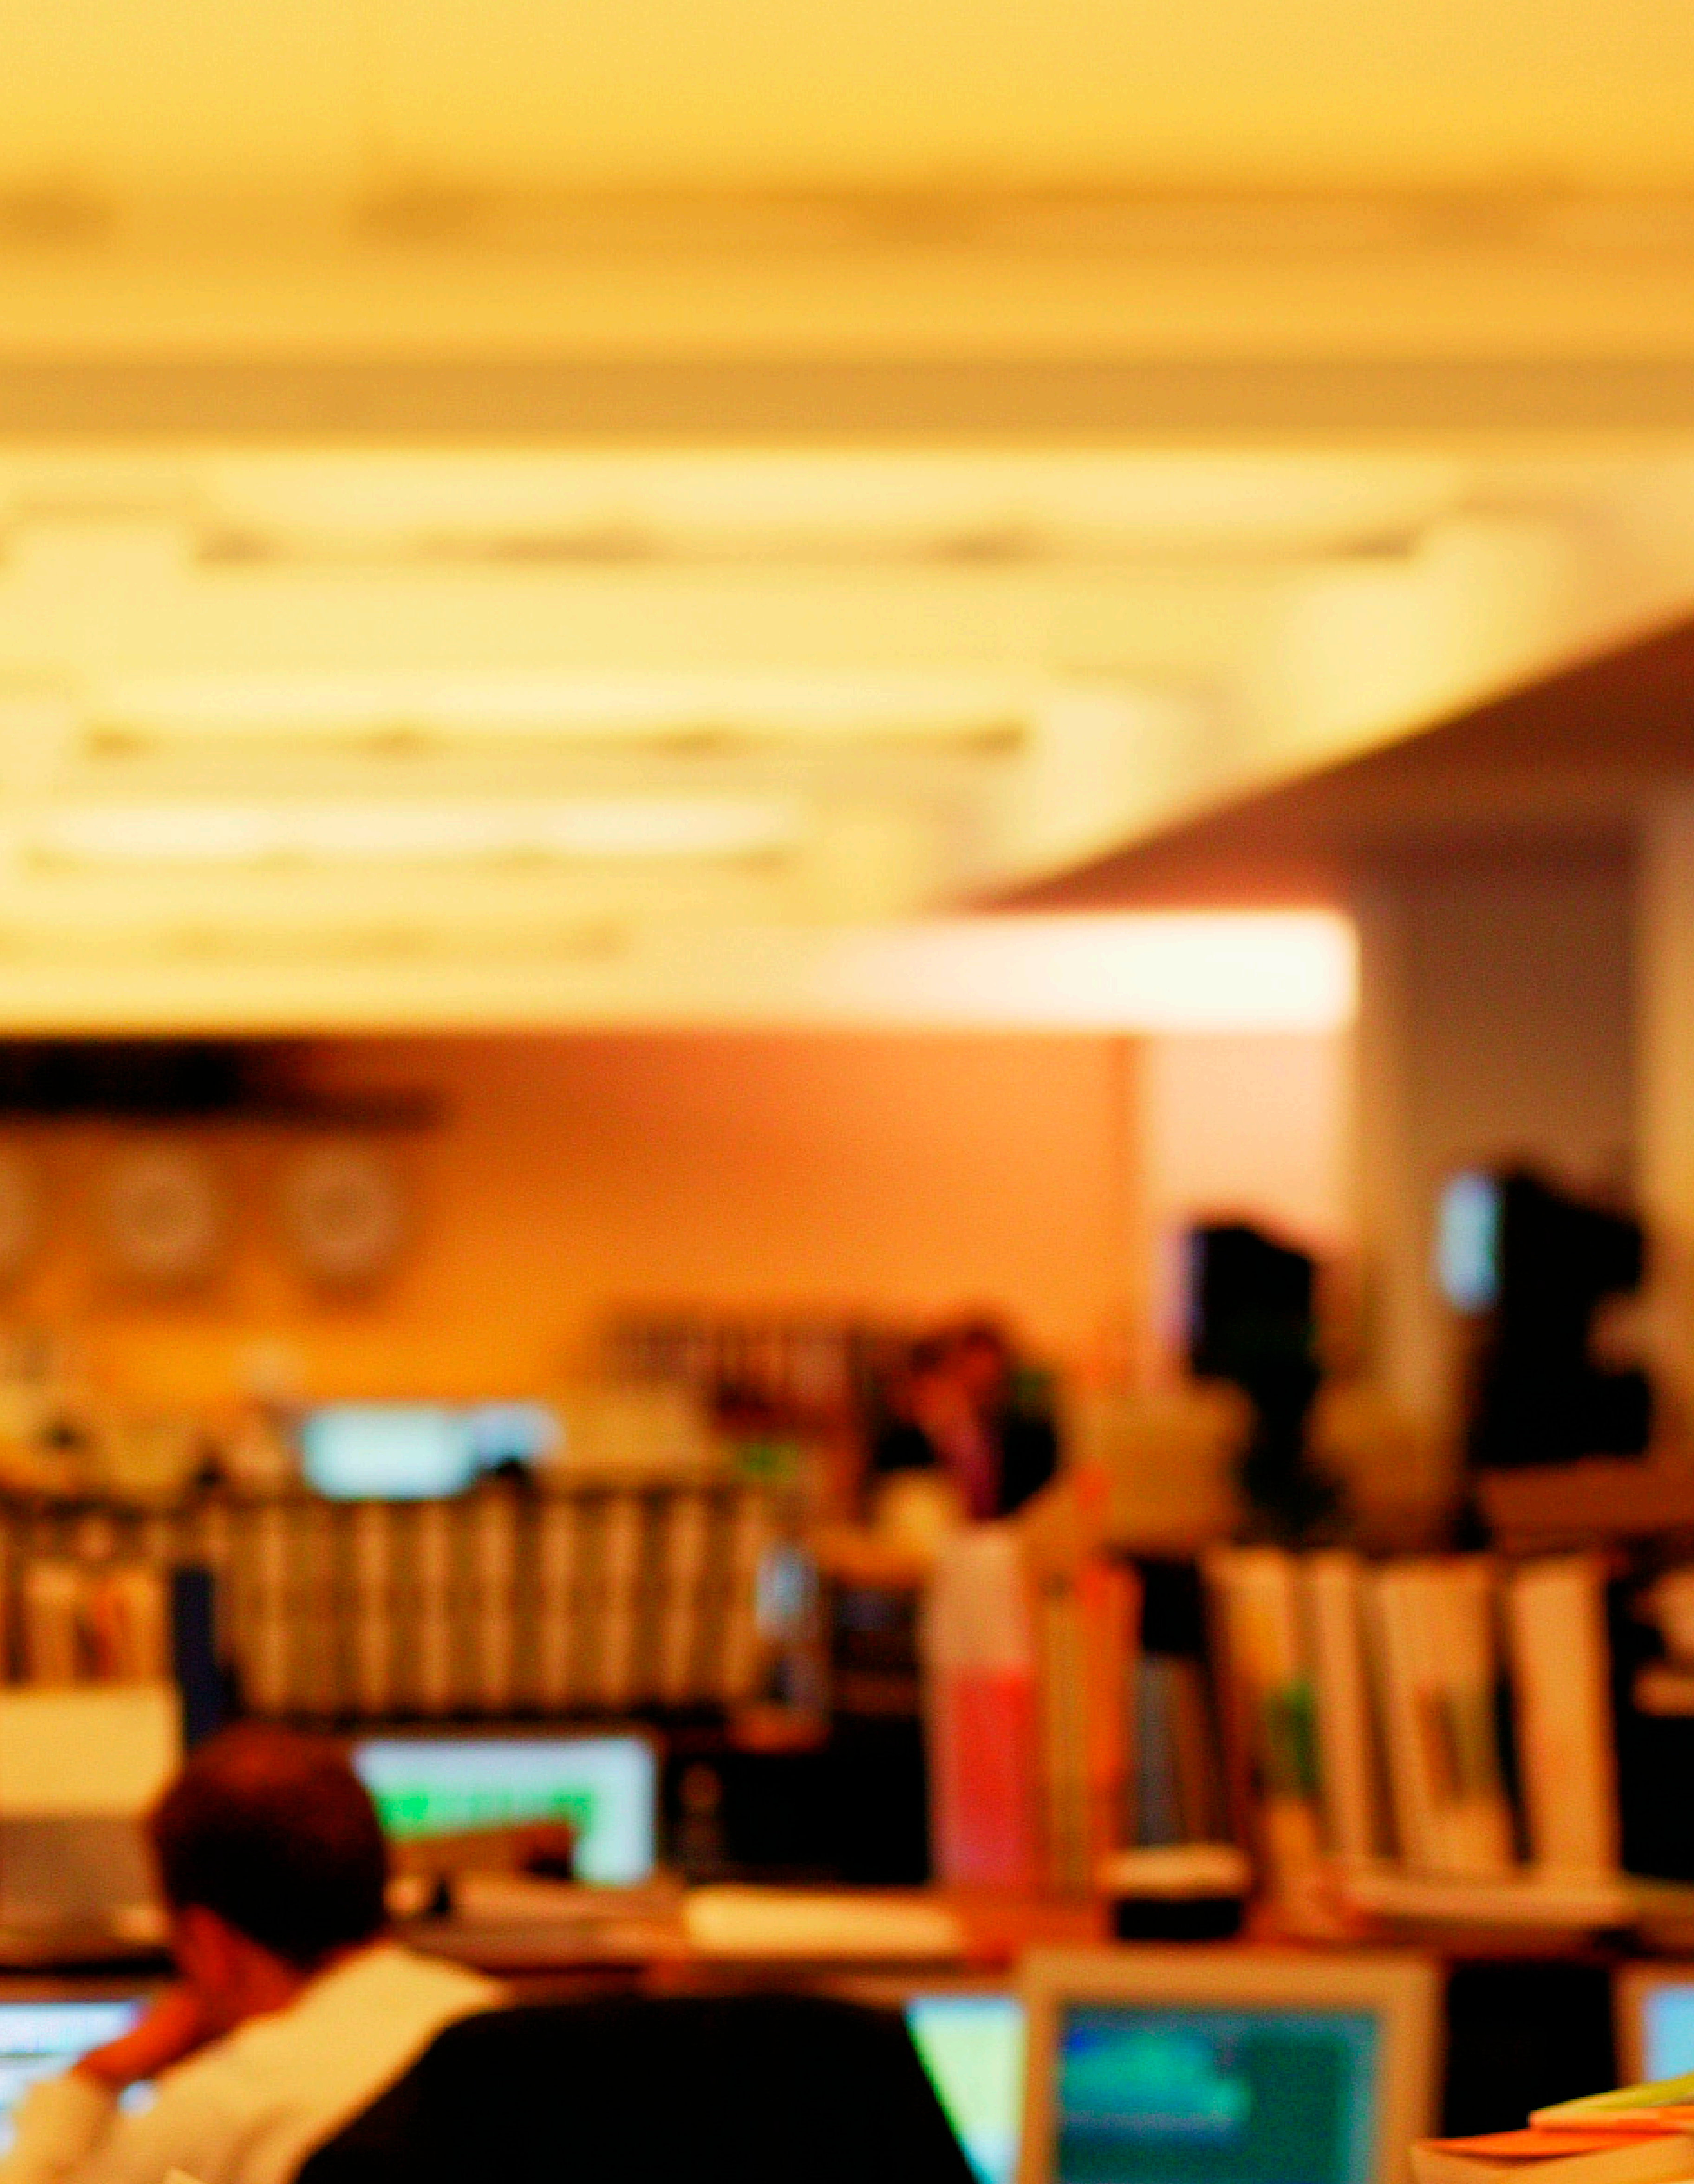
Never satisfied.

IntercontinentalExchange
2006 Annual Report

ICE established the world's first global, connected electronic energy marketplace.





but we saw more opportunities

We offered futures and OTC markets on an integrated trading platform.

and our pace of innovation accelerated

Today, we're meeting the needs of more commodities markets around the world.

and our evolution continues

Quite simply, we are never satisfied.

We anticipate customer needs and strive to deliver the products, services and performance required in today's dynamic markets. That's how we grow our marketplace; that's how we build value for our investors.

ICE was formed in 2000 to address a critical market need: a more efficient, transparent energy marketplace. Today, we operate global markets offering a growing suite of benchmark commodity contracts, leading-edge risk management tools and a common technology that unites commodity markets worldwide. And our journey has just begun.

Jeffrey C. Sprecher
Chairman, Chief Executive Officer

Expanding a marketplace.

By envisioning and building a leading electronic marketplace for commodities, ICE helped transform what was once a relatively opaque business into a vibrant market, delivering the benefits of transparency and liquidity to a broad range of users across the connected global economy. We believe that it is early in the adoption of electronic trading within the commodities asset class, and we are well positioned to continue to help chart the course of the expanding commodity markets by maintaining our focus on opportunities.

Since 2000, the size of the global energy markets has doubled as a result of many factors. Increased reliance on hedging, more market participants, the advent of over-the-counter clearing, new products and electronic trading have all contributed to the increasing relevance of these markets. When markets are more transparent and liquid, risk managers and hedgers have more tools to protect themselves against the volatility that arises from sudden changes in supply and demand, geopolitical events, weather, and transportation and storage variables. Traders are able to find opportunities to lay off or take on risk. And through an electronic marketplace, market observers have an accurate view of markets in real time. Because energy is one of the most significant commodity complexes in the world—crucial to economic growth and security—an effective and transparent market mechanism is vitally important. Today, our regulated electronic energy futures markets span 47 unique regulatory jurisdictions around the globe and around the clock, expanding market access outside the walls and geographic borders.

Through our leadership in supporting the growth and access to the broader energy market, ICE has attracted customers and expanded liquidity in dozens of products. This is good for the market as a whole, and good for our business. And we're not stopping at the energy markets; our view of the future is broad. Our recent acquisition of the New York Board of Trade (NYBOT), for example, expands our reach to agricultural commodities and financial instruments, as well as providing valuable clearing capabilities. We continue to seek new opportunities to leverage our valuable markets and technology and to expand our reach to more markets and participants. With an entrepreneurial approach and a focus on growth, we readily accept that challenge.

Charles A. Vice
President, Chief Operating Officer

Focus on customers.

The relatively short history of ICE is long on innovation. Out of a desire to address unmet customer requirements, we began with the idea that prompted the company's founding: to create an electronic energy marketplace. Since then, we've built our business by seeking ways to support our customers' needs in a rapidly changing marketplace.

We began by listing the most commonly traded over-the-counter products, those traditionally executed directly between counterparties or via intermediaries using telephone or fax. We aggregated these markets on a common trading platform, creating a level playing field for large and small market participants, giving all an equal view of the market. We leveraged our access to a global third-party clearing house to create the concept of "cleared over-the-counter" energy contracts. This innovation reduced the inherent credit risk between counterparties and improved capital efficiency for our participants. We then transformed our futures exchange into the first all-electronic energy exchange. We pioneered electronic trade confirmation in the energy markets to increase operational efficiencies for customers. With their input, we developed new products for the North American gas and power markets and the global crude oil and refined markets. In addition, ours serves as the platform for the leading carbon emissions markets in the U.S. and Europe.

Our innovation even extends to how we connect with our customers. In addition to developing one of the most flexible and accessible trading platforms, we built an unparalleled operations and help desk group. Based in both Atlanta and London, our knowledgeable and responsive customer support team is tightly integrated with our technology operations. Our help desks are staffed around the clock and field some 7,000 calls per month, providing an invaluable link to our customers.

Turning challenges into opportunities requires both responsiveness and creativity. And while we strive to develop new ways to grow our markets through a range of strategic initiatives, including internal development, acquisitions and joint ventures, our most important partner will remain our customer.

David S. Goone
SVP, Chief Strategic Officer

Getting results.

We equate the changing marketplace with opportunities for our growth. ICE was formed to address a clear market need, and our subsequent evolution has been driven by the dynamic requirements of ICE's thousands of customers around the world. We have expanded this vision to pioneer new approaches to markets and to create opportunities for our customers. This approach has resulted in sector-leading growth.

When we sought to expand outside of over-the-counter products, our first strategic move was to acquire a futures exchange. By growing that business and applying our technology, ICE Futures today accounts for nearly half of the world's futures traded on crude oil and refined products. In 2006, we introduced the first fully electronic West Texas Intermediate (WTI) crude futures contract. That product, which trades alongside our benchmark Brent crude futures contract, quickly became one of the most successful product launches in the industry.

Producing results begins with a tangible goal in mind; ours is to grow our business by successfully expanding our markets and risk management tools. Our customers, rightfully, demand a lot: performance, functionality and responsiveness. That's why, at ICE, the process of developing and introducing new products begins and ends with the customer. The process of working with customers on the hundreds of contracts we offer provides us with valuable insight that we leverage in our operations.

Another illustration of our ability to convert market opportunities into growth drivers is our market data business. Prior to ICE's formation, one of the issues in energy trading was the imperfect information flow. We've transformed our deep, rich pools of data into an important source of market information and revenue. Market participants and observers rely on real-time ICE market data feeds, daily indices and other market reports to conduct their operations each trading day.

We continue to innovate. Within just three weeks of closing the NYBOT transaction in early 2007, we successfully introduced electronic trading for NYBOT's benchmark agriculture commodity contracts, including sugar, cotton, coffee, cocoa and orange juice, achieving record exchange-wide volume in the first month of electronic trading. We're working to follow this first milestone with numerous initiatives that ensure we remain at the forefront of commodity markets for customers and shareholders.

Edwin Marcial
SVP, Chief Technology Officer

Advancing technology.

In recent decades, technology has driven change in the markets, and ICE has leveraged technology from its beginning. Because we had no legacy systems, we took advantage of the newest technologies, like object-oriented programming, Java and FIX, as well as the Internet, to develop a powerful but lightweight architecture that would efficiently scale for more capacity, more products and more functionality. We take pride in our leadership in developing an integrated technology solution that extends from the front office to the back office. In addition to developing our leading-edge ICE platform, we leveraged our integrated technology to build electronic trade confirmation and market data businesses, and develop our custom WebICE front-end. These are just a few examples of how we've extended the ways that customers rely on ICE. We're not finished, however, and we're working to ensure our markets and technology platform become even more relevant as the global commodity markets evolve.

These days, our technology initiatives are wide-ranging. However, our strategy focuses on three goals: continue to anticipate and collaborate with customers to develop and deploy the technology and functionality they need and want, to integrate new markets such as those acquired through NYBOT, and to make the ICE platform the fastest, most sophisticated electronic commodities trading platform in the world.

We're making excellent progress on each of those strategic initiatives. Perhaps our biggest technology accomplishment in 2006 was to reduce the average processing time for a transaction. Just a few years ago, our processing time was 600 milliseconds; today, it's approximately 30 milliseconds, making our system one of the fastest platforms in the industry. As our markets and customer base grow, we continue to expand our capacity. On any given trading day at peak trading hours, there are more than 6,500 simultaneous connections to our trading platform.

By leveraging the flexibility built into our electronic marketplace, we are able to support our technology goals while meeting business requirements across our global and diverse businesses. Technology empowers us, and we continue to harness its capabilities to empower our customers and strengthen our marketplace to produce tangible results.

To our shareholders.

Nearly seven years ago, ICE was formed to bring an open, market-based solution to the vital markets for energy trading and risk management using technology. Since then, we have become a leading global commodity marketplace. In 2006, our first full year as a public company, we grew our business and our profitability substantially. We established volume records across our global energy complex, including in our benchmark Brent crude and gas oil futures contracts, and our North American natural gas and power markets by leveraging our widely distributed technology platform. We capitalized on new product opportunities, such as the ICE West Texas Intermediate crude futures contract, as well as dozens of new cleared over-the-counter (OTC) products. We also substantially enhanced the performance of the ICE platform to anticipate the demands of a diverse and growing marketplace. Finally, we closed out the year by working toward the completion of our second exchange acquisition.

2006 results

Our consolidated financial results are noteworthy:

- Revenues were a record $313.8 million, an increase of 101% over 2005 revenues of $155.9 million.
- Net income of $143.3 million, another record, improved by 255% from 2005.
- Profitability also improved: Our operating margin for 2006 increased to 65% from 36% in 2005.

It was, in short, a great year for ICE, a testament to the solid foundation we've built and to the growing reliance on our marketplace to manage risk and invest in the global commodities asset class. The equity market has rewarded our growth by recognizing the strength and the potential of our business, as well as our ability to turn opportunities into results. ICE common stock posted a one-year return of 197% in 2006. In fact, we were honored that *The Wall Street Journal* singled out ICE as the best performing stock of 2006 out of 1,000 companies in its annual Shareholder Scoreboard.

I believe I speak for each member of the ICE team — now more than 500 professionals — when I say we take pride in what we've accomplished to date. *But what motivates us at ICE is not the past but the future. We are working diligently to ensure that ours is a bright one.*

As this report reaches investors, 2007 is well underway and we are focused on initiatives that will allow us to demonstrate our leadership. We are striving to deepen our reach into the energy markets through new products, new customers and partners, and technology enhancements. We are integrating and leveraging the valuable assets gained through the New York Board of Trade (NYBOT) acquisition. Importantly, we continue to think outside the boundaries of convention in order to ensure that we are advancing solutions in the arena of derivatives and risk management. Our tenacious devotion to customers is a key element of our success. If we can continue to excel on these fronts, we'll meet our overarching mission: to enhance shareholder value.

NYBOT: Moving beyond energy

While we conceived ICE to address a need in the energy markets, the rapid success of our business model suggested that our platform could extend to other markets. Our vision expanded beyond energy, and in 2006, our progress toward realizing that vision took a defining step forward.

The acquisition of the NYBOT, announced in the fall of 2006 and closed in January 2007, meaningfully broadened our reach into several new markets, including futures and options on agricultural commodities, as well as financial products such as indices and foreign exchange. It also provides us with important clearing opportunities.

On February 2, 2007, we successfully introduced, for the first time in NYBOT's 136-year history, electronic trading in its benchmark contracts for sugar, cotton, coffee, cocoa and orange juice. This was a significant milestone for market participants and for ICE. The speed and early success of this introduction is a testament to the scalability and flexibility of our technology and to the capabilities of our staff. We are working quickly to list more NYBOT contracts on our electronic platform and to complete the strategic plans for leveraging our clearing relationships and capabilities.

We have helped transform and grow the energy markets, and we believe energy will continue to be a significant driver of our business on a global basis. Our opportunity transcends energy, as the NYBOT acquisition demonstrates, and we are pursuing potential partnerships around the world. To address the broader market for risk management, we are working to facilitate and manage growth, integrate mergers and acquisitions and develop innovative products, services and technology to meet evolving market conditions.

Our strengths

When we formed ICE, the vision we had of the energy markets was based on the needs of market users and the need for a market-based solution. When we filled the void in the over-the-counter markets for an open and accessible marketplace, the result was a level playing field for participants to meet their hedging needs in a liquid and neutral venue. An efficient market structure where prices are transparent is a crucial element of a thriving global economy.

The vision was important, but we believe it was how we implemented that vision that has fueled our growth. First, we leveraged technology to develop a platform that was tailored to commodities in both futures and over-the-counter markets. Electronic trading was already in place in the equities and fixed income markets, but had not been as successfully applied to the commodity markets. Today, the ICE platform allows qualified market participants to monitor market activity and to execute transactions in real-time with the knowledge that the integrated systems, technology and tools are in place to support their risk management needs.

Another key element of our strategy was to remain neutral with respect to the markets we serve. Today we operate both U.S. and UK regulated futures exchanges. We understand our role of neutrality and ensuring market integrity is essential to promoting the interests of a healthy market that engenders confidence from its users. As part of that commitment, we are scrupulous about compliance and cooperation with the regulatory bodies that govern our diverse markets, and are pleased to have taken a leadership role in bringing new solutions to an increasingly global marketplace.

Finally, we've been focused on our customers from the very beginning, and our ability to anticipate and respond to their evolving requirements has been essential to our growth and success. As we move forward and extend our capabilities to new markets and new opportunities, we recognize and rely on the strengths that have been central to our success.

In closing, I want to salute the tireless efforts of our team at ICE. These talented individuals have always worked hard, but 2006 was a remarkable year by any metric and one that placed huge demands on them. They've earned my personal gratitude for a job well done; they are the source of my own confidence about ICE's future. I look forward to reporting on our progress in the coming year.

Sincerely,

Jeffrey C. Sprecher

Board of Directors

Left to right:
Fred W. Schoenhut, Sir Robert Reid, Judith A. Sprieser, Jean-Marc Forneri, Vincent Tese, Jeffrey C. Sprecher, Frederic V. Salerno, Richard L. Sandor, Ph.D., Charles R. Crisp, Terrence F. Martell, Ph.D.

Jeffrey C. Sprecher
Mr. Sprecher is a founder of IntercontinentalExchange (ICE), serving as the company's Chief Executive Officer since its inception in May 2000 and as Chairman since November 2002.

Mr. Sprecher recognized the potential for creating a transparent and efficient marketplace for energy commodities, purchasing Continental Power Exchange, Inc. (CPEX), the predecessor to ICE. Mr. Sprecher spearheaded the assembly of thirteen leading wholesale commodities market participants who became initial shareholders. Mr. Sprecher also led the acquisition of the International Petroleum Exchange in 2001 and the New York Board of Trade in 2007.

Charles R. Crisp
Mr. Crisp, who has been a director since November 2002, is the retired President and Chief Executive Officer of Coral Energy, a Shell Oil affiliate responsible for wholesale gas and power activities.

Jean-Marc Forneri
Mr. Forneri, who has been a director since November 2002, is founder and senior partner of Bucephale Finance, a boutique M&A firm specializing in large transactions for French corporations, foreign investors and private equity firms.

Terrence F. Martell, Ph.D.
Dr. Martell, who has been a director since January 2007, is a former Member of the Board of Governors of the New York Board of Trade, the world's leading exchange for soft commodities and a wholly owned subsidiary of ICE.

Sir Robert Reid
Sir Robert Reid, who has been a director since June 2001, was the Deputy Governor of the Halifax Bank of Scotland from 1997 until 2004 and has served since 1999 as the Chairman of the International Petroleum Exchange of London, today known as ICE Futures.

Frederic V. Salerno
Mr. Salerno, who has been a director since November 2002, is the former Vice Chairman of Verizon Communications, Inc. Before the merger of Bell Atlantic and GTE, he was Senior Executive Vice President, Chief Financial Officer, serving in the Office of the Chairman of Bell Atlantic from 1997 to 2001.

Richard L. Sandor, Ph.D.
Dr. Sandor has been a director since November 2002. He is the Chairman and Chief Executive Officer of the Chicago Climate Exchange, Inc., as well as of Environmental Financial Products, L.L.C.

Fred W. Schoenhut
Mr. Schoenhut, who has been a director since January 2007, is the former Chairman of the Board of Governors of the New York Board of Trade, the world's leading exchange for soft commodities and a wholly owned subsidiary of ICE. In 1980, Mr. Schoenhut formed Copia Trading Co., Ltd., a coffee futures execution firm.

Judith A. Sprieser
Ms. Sprieser, who has been a director since April 2004, was the Chief Executive Officer of Transora, Inc., a technology software and services company that she helped found in 2000, from 2000 until its merger with UCCnet in 2005.

Vincent Tese
Mr. Tese, who has been a director since April 2004, currently serves as Chairman of Wireless Cable International, Inc., a position he has held since 1995.

About IntercontinentalExchange

IntercontinentalExchange® (NYSE: ICE) operates the leading global, electronic marketplace for trading both futures and OTC energy contracts and the leading soft commodity exchange. ICE's markets offer access to a range of contracts based on crude oil and refined products, natural gas, power and emissions, as well as agricultural commodities including cocoa, coffee, cotton, ethanol, orange juice, wood pulp and sugar, in addition to currency and index futures and options. ICE® conducts its energy futures markets through its UK regulated London-based subsidiary, ICE Futures, Europe's leading energy exchange. ICE Futures offers liquid markets in the world's leading oil benchmarks, Brent Crude futures and West Texas Intermediate (WTI) Crude futures, trading nearly half of the world's global crude futures by volume of commodity traded. ICE conducts its agricultural commodity futures and options markets through its U.S. regulated subsidiary, the New York Board of Trade®. For more than a century, the NYBOT® has provided global markets for food, fiber and financial products. ICE was added to the Russell 1000® Index on June 30, 2006. Headquartered in Atlanta, ICE also has offices in Calgary, Chicago, Houston, London, New York and Singapore. For more information, please visit www.theice.com and www.nybot.com.
