Intercontinental Exchange, Inc. (ICE)

Raymond James Institutional Investors Conference

CORPORATE PARTICIPANTS

Warren Gardiner

Chief Financial Officer, Intercontinental Exchange, Inc.

OTHER PARTICIPANTS

Patrick Joseph O'Shaughnessy

Analyst, Raymond James & Associates, Inc.

MANAGEMENT DISCUSSION SECTION

Patrick Joseph O'Shaughnessy

Analyst, Raymond James & Associates, Inc.

All right. We're at the top of the hour, so we can go ahead and get started. Thanks, everybody, for joining us this morning. I'm Patrick O'Shaughnessy, the capital markets technology analyst here at Raymond James. And up next, we have Intercontinental Exchange. And on their behalf, we have CFO, Warren Gardiner.

Just to get the elephant in the room out of the way, ICE is unable to speak to the pending transaction of Black Knight. So I'm sure you guys want me to ask all sorts of questions about it, but the answer is going to be the same. We can't say anything about it. So instead of doing that, we'll go a different route with our Q&A.

To kick us off, Warren, if maybe you can just provide an introduction of the company for people who are a little bit less familiar with ICE.

Warren Gardiner

Chief Financial Officer, Intercontinental Exchange, Inc.

Sure. And thank you, Patrick. Thanks for having us. We always enjoy coming back here and particularly honored this year to be following the host company in our fireside chat here. But – so when I think about ICE and what we think about ICE, what is ICE? We're a data and technology company. We use data and technology across the different asset classes that we're in, and apply that data and technology across the asset classes we are in to the workflows that our customers utilize and to help them make them more efficient.

And so when – I'll give some examples. Think about energy, for example, one of our oldest, if you will, asset classes that that we're in. We started a couple of decades ago, and it was largely an analog asset class at the time. We had a couple of energy contracts. Today, you fast forward, we've helped digitize that asset class, and at the same time, through organic and inorganic growth, we've got a platform today that spans the globe in terms of our presence across that asset class and spans through the number of – the different types of sources of energy, the different use cases of energy, if you will, with thousands of products. And as a result, you've seen compounding growth in that asset class on our platform over the last 5, 10 years, however you want to cut it, and certainly over the last 20 or so that we've been present in the asset class.

And so, it's a blueprint that we apply, as we have over the last number of years. As we move into adjacent opportunities and other asset classes, that's a blueprint we apply as we do that. And so you think about fixed income and data services, one of our other big segments, of course, we're leveraging a presence through our – the foundational network, if you will, that we have as an end-of-day price provider in fixed income markets to build pre- and post-trade tools, analytics and things of that nature, as well as provide a matching engine with our bonds platform to really be present across that workflow and to help that workflow further digitize, become more efficient.

Mortgage, also another – a newer asset class for us, if you will, one that we got into back in 2017 to start with a small acquisition by a company named MERS. It's the same idea. And then we started to build up a presence across the workflow and be as present as we can across that workflow to really address the different pain points that exist for our customers. And so, with our recent acquisition of Ellie Mae back in 2020, we've now got from point-of-sale all the way through to the closing process, a presence across that workflow, to really help customers further digitize, bring more efficiency to the workflow, reduce the time it takes to originate a mortgage and ultimately reduce the cost to originate a mortgage, and through that, sharing some of those savings.

And so, while, yes, there are differences in terms of originating a mortgage and what one needs to do to accomplish that relative to maybe hedging natural gas exposure on our energy side, the blueprint across these asset classes and some of the commonalities and the common thread, if you will, that exists for us is really the data and technology that we're able to apply, and that's the expertise we bring to the asset class to make them more efficient over time.

QUESTION AND ANSWER SECTION

Patrick Joseph O'Shaughnessy

Analyst, Raymond James & Associates, Inc.

Q

Got it. Appreciate that intro. Building off of that, what do you think ICE does better than any other company?

Warren Gardiner

Chief Financial Officer, Intercontinental Exchange, Inc.

A

Well, I think it comes back to data and technology. That – 50% or so of our employee base, if you will, is our technology and operations. And so, we've really developed an expertise over time, which is compounded – as the size and the presence we've had across different asset classes had increased, compounded over time in terms of our expertise to really address all these different pain points that exist across the different workflows.

The other thing that I think and somewhat related to that is that we've always taken the approach of being – wanting to be really close to the customer, again, understanding their pain points and where we can provide solutions for them. I think it's one thing particularly is energy, to go back to that example, the way we've developed that platform over the last number of decades is staying close to that customer, understanding how that asset class is evolving through their eyes, and developing product and developing solutions around that to make things frankly easier for them.

So, I think when we think about what we do best, it's leveraging the data, leveraging technology, harnessing raw data oftentimes to create product that will make things more – make the workflow more efficient for our customer base.

Patrick Joseph O'Shaughnessy*Analyst, Raymond James & Associates, Inc.*

Q

So, as you think about leveraging the data and the technology and staying close to your customers, how has that translated to how ICE is faring competitively? And maybe you can address that across the different businesses.

Warren Gardiner*Chief Financial Officer, Intercontinental Exchange, Inc.*

A

Sure. Really well and I think evidenced, frankly, by the growth that we've had over the last number of years. We've grown earnings per share every year since we've been public. And so, I think in terms of our competitive positioning, it's certainly been – we've been on the winning side of that. And so, think about areas like energy. You can look at our revenue share within the energy business and it's near all-time highs.

The New York Stock Exchange, for instance, last year, we had a record year in terms of transfers. Of course, it was a difficult year for capital markets overall in terms of IPOs, but we actually had more companies transfer to the New York Stock Exchange than we did in the last three or four years combined. So, really doing a lot within an environment that was obviously challenging from a new IPO perspective.

Within our data business, we continue to gain share in the index business through index transfers and things of that nature. And you can also see within our recurring revenue growth in the data side, that continues to compound as well. So, leveraging that foundational network or that pricing network to kind of build out in areas like indices, like feeds. We've also had a – we had a very good year in feeds in 2022, again, kind of being able to kind of leverage the position we have as sort of a superstore, if you will, of data services for people across the industry. And so, that's been another area that's done well for us.

And then also desktops has been a positive area within our other data and network services, where we've made some investments in that business over the last number of years, particularly around some of the energy data that we've had, and we've had some success from there as well. So, really across the business, I think we're doing well in what is increasingly sort of a choppy and challenging macro environment. But that's where I think we can really come in and work with customers to find solutions to the issues they're having and maybe help them save some money but spend more with us.

And frankly, I think over a longer period of time, it's important to understand that the diversification of ICE that we have across all these different asset classes enables us to invest through a lot of different cycles and put ourselves in a better position competitively as a result of that, whereas as a stand-alone competitor in any of the asset classes that we might be in, in any given cyclical environment or downturn, may have to pull back a little bit more where we can invest through it. And I think it's a really important competitive advantage that we have being across all these different asset classes that we're in.

Patrick Joseph O'Shaughnessy*Analyst, Raymond James & Associates, Inc.*

Q

How integrated are your three different segments with each other? So there's exchanges, there's fixed income data and then there's mortgage technology.

Warren Gardiner*Chief Financial Officer, Intercontinental Exchange, Inc.*

A

So it's a really important concept for us. It's a very flat culture. There's a lot of collaboration across the segments and across the different businesses. And from our perspective, it's – as the business has gotten bigger, as we've

expanded into new asset classes, the opportunity or the sandbox, as I sometimes have said, has expanded and the opportunity for product creation and, importantly, unique product creation, things that others aren't able to do, has only expanded with it.

And I think an example, for instance, is in the mortgage business where Ellie Mae, of course, as you're familiar, it's a loan origination platform. They have nearly half of the mortgage in the United States that originated on that platform. There's a lot of raw data that runs through that. There's a real-time data on what's happening in the United States mortgage market.

We've been able to take a lot of that data. And as I said a little bit earlier, one of the things we're really good at is harnessing raw data and creating product out of it. We take a lot of that raw data and create a data product that helps with prepayment – people better understand prepayment trends and are related to mortgage-backed securities. And so it's kind of a unique data set that either platform on a stand-alone basis really wouldn't be able to do.

Another thing that we've done, too, is on – you may have seen our Rate Lock Indices that we've launched. And so, again, we took some of the mortgage data that we have on the Ellie Mae platform. We leverage the index business, the infrastructure and the expertise that we have on that platform, that's in our Fixed Income & Data Services segment, to create an index. And then we launched a futures contract on that. And that futures contract will really help people more precisely hedge a lot of mortgage exposure that they might have as they're going through that origination product.

So, again, it's a unique product that one of those platforms on a stand-alone basis would have a difficult time doing and one we were able to launch pretty quickly after the acquisition of Ellie Mae back in 2020, so.

Patrick Joseph O'Shaughnessy

Analyst, Raymond James & Associates, Inc.

Q

So every quarter, ICE's earnings presentation finishes with a slide that displays ICE's long-term EPS growth. And it shows, at this point, or I guess it's in the past at this point, a 16% CAGR from 2006 through 2022. That said, EPS growth did slow to mid-single digits in 2022. And the current consensus estimate calls for a low- to mid-single digits in 2023. How confident are you that 2022 and 2023 are the aberration rather than the new norm going forward?

Warren Gardiner

Chief Financial Officer, Intercontinental Exchange, Inc.

A

Well, look, it's pretty good growth. It's a pretty good track record that you note there over that long period of time. And we always think about it over the longer term. You're all probably familiar with my boss and our Founder, Chairman and CEO, Jeff Sprecher. He's always one that has had not thought in quarters or years, but generally in decades, if not longer. And so we do think about the long-term growth, and that is what's important to us. And we're willing to invest in growth and opportunities now to secure growth in the future.

But – and so when I think about that track record, it's really impressive. And I think when I think about more recently you may have been – you may have thought it was a little bit weaker growth in that particular year, but given the environment, I think pretty impressive. And certainly, many others that I think are ascribed a higher multiple that did not grow in that particular period.

And when I think about the period of 2020 or 2021 relative to 2022, you had a completely different macroeconomic environment. You had, in the prior period, 2020, 2021, low interest rates, mortgage was doing

well. Our CDS business, our ICE bonds business, our interest rate business, maybe not doing as well. You fast forward to 2022 and that flips. We grew in both situations. And again, I think it's a real testament to the all-weather nature of the business model and our ability to grow through a lot of different macroeconomic environments.

And again, it comes back to what I was saying a little bit earlier, where that ability to do that and the resilience of that – resiliency of that revenue stream is what enables us to then invest in these businesses and invest in these growth opportunities when stand-alone entities may not be able to do so. So, again, it comes back to I think the real competitive advantage we have with the model that we've built.

Patrick Joseph O'Shaughnessy

Analyst, Raymond James & Associates, Inc.

Q

When you think about ICE's revenue growth going forward, do you think most of that comes from products and solutions and asset classes that are already on the platform or how much of your growth do you think is going to come from innovations that don't currently exist?

Warren Gardiner

Chief Financial Officer, Intercontinental Exchange, Inc.

A

Yeah. It's a really good question. And so, it's both, frankly, and that's how it's been since the beginning of time for ICE in terms of how we've driven growth. And so, I come back to energy, and I think it's always a really good example because it's a great blueprint of how ICE thinks about asset classes.

But again, we started with a few products. Those products still exist today and they're still growing today. We only had a handful at the time. Now we've got a couple thousand and those are growing too. And we've got – we've positioned ourselves within an area like energy across the asset class globally and from a product perspective, so that we can really – we are in a position, as long as we stay close to our customers, which we've always done, to really evolve as that asset class evolves.

And so, that's the approach we take and I think you can say the same thing for what we'll do in fixed income and in mortgage as well. We've got a foundational network in each of those asset classes to bolt on and to add capabilities inorganically. But you also do it organically, which sometimes I don't know that we get as much of the headlines or credit for, but certainly something that has happened under the covers, if you will, for many years across the entire business.

Patrick Joseph O'Shaughnessy

Analyst, Raymond James & Associates, Inc.

Q

A bit more than half of ICE's revenue in 2022 came from recurring sources. Do you have a view on how you expect recurring versus transactional revenues to – how you expect that mix to change over time, if at all? Do you expect recurring to grow faster or slower than transactional?

Warren Gardiner

Chief Financial Officer, Intercontinental Exchange, Inc.

A

So, it's a tough question because we don't necessarily – but a good one. We don't necessarily target a certain percentage either today or in the future. We do expect both of those revenue streams, if you will, to grow and to grow at attractive rates. And so, I don't know that I have an answer on that, but that's only because I think we've got a very strong outlook, a positive outlook for the asset classes we're in and the various products that we have supporting those asset classes, both whether they're transaction or recurring in nature.

Certainly, the Street and investors seem to appreciate recurring revenues a little bit more for certain companies. And so, where we have opportunity and it does make sense, we will look for those opportunities to go – to push more recurring. But ultimately, I think that there's opportunity across both. And we just want to be there to sort of support our customers and drive growth overall for the business at the end of the day.

Patrick Joseph O'Shaughnessy*Analyst, Raymond James & Associates, Inc.*

Q

So, it's no secret that the Mortgage Technology business struggled in 2022. Obviously, it's relatively origination volume dependent. Are you seeing anything out there in the origination space right now that would move you guys off of that 8% to 10% growth outlook that you had for Mortgage Technology at the time – that you spoke to at the time that you bought Ellie Mae?

Warren Gardiner*Chief Financial Officer, Intercontinental Exchange, Inc.*

A

So, no, it's – when we announced that acquisition and subsequently closed it a month or so later, we expected there to be a decline in origination activity at a macro level, if you will, at some point. It was a little [ph] grower (00:16:13) in 2021 and then in 2022 some more. So it was a little bit – it turned out being a little bit sharper than we anticipated, but we certainly have expected that to normalize and that's what's happening.

And so, the truth of it all, though, is that this wasn't about 2021 or 2022 in terms of why we entered into this space and what we want to get out of that in that sense. This is about bringing efficiency to an asset class today that is a huge asset class that I think, as many in the room I'm sure know, is still very inefficient and costly. It costs somewhere close to \$10,000 to originate a mortgage, whether that's a \$1 million mortgage or a \$50,000 mortgage. And so, the opportunity for us is to bring some efficiency through data and technology, collapse the time that it takes to originate a mortgage today and take costs out of that system to lower that for all consumers and our customers as well, but obviously that would then pass through to consumers.

So I think we have the platform to do it. And this is a multiyear opportunity, similar to what we've seen in other asset classes where we can really apply the expertise we have both on a data and technology side to bring that efficiency for customers and consumers alike. So, no, it doesn't change that outlook because, frankly, mortgages aren't going anywhere. They're the underpinnings of shelter, a basic human need. And so we're confident in that and looking forward to continuing to execute against that.

Patrick Joseph O'Shaughnessy*Analyst, Raymond James & Associates, Inc.*

Q

Got you. So we focused mostly so far on the revenue side of the equation, but maybe shifting to margins. In 2022, ICE achieved a 59.5% adjusted operating margin, obviously a pretty high level, certainly off your peak but still probably higher than most of the other companies present at the conference today. How do you think about ICE's margin progressing going forward and how do you think about how margin expansion plays into the EPS growth algorithm for the company?

Warren Gardiner*Chief Financial Officer, Intercontinental Exchange, Inc.*

A

Yeah. It's a good question. I think it's slightly off peak margins, but peak margins, we would have had less than \$1 billion or so of operating income, where today we've got \$4.5 billion of operating income. So we've got a business that's much bigger that we've grown substantially over that period of time. And I think as we've added – and of course, a lot of that has come both organic and inorganic growth. But as we've done that, we've done a really

good job in terms of investing in profitable growth opportunities. And that's why you're seeing the margin at the level that we're at.

And so, as we're thinking about the future here, we will continue to do that. We'll continue to look and invest in those opportunities that are going to drive profitable growth for us. You've seen us certainly in areas like mortgage, where back in 2019 I think it had a – the pro forma business had margins in the 30s. And today we're in the mid-40s despite having similar levels of loan volume running through the platform.

So, again, profitable growth is the goal for us. And while we will certainly take a long-term view and invest for the future, we're very conscious of the margin and the returns that we want to deliver for our shareholders over time.

Patrick Joseph O'Shaughnessy

Analyst, Raymond James & Associates, Inc.

Q

Are the incremental margin profiles across the three segments meaningfully different from each other?

Warren Gardiner

Chief Financial Officer, Intercontinental Exchange, Inc.

A

Well, it depends on the particular business within that to some extent. The transaction businesses or the products with transaction fees, some have actually had both. But a transaction fee, if you will, is going to have a higher incremental margin, generally speaking, than a recurring revenue. But pretty much across the board, these are high-margin businesses.

What we like to do is not do bespoke products, not do customization, things of that nature. It's really build it once, sell it many times. And that obviously lends for some pretty attractive incremental margins regardless of the product or asset class that we're in.

Patrick Joseph O'Shaughnessy

Analyst, Raymond James & Associates, Inc.

Q

How does management at ICE think about the company's return on invested capital? And has that thinking changed at all given the rising cost of capital?

Warren Gardiner

Chief Financial Officer, Intercontinental Exchange, Inc.

A

It's important metric for us. And again, it comes back to profitable growth and how we're thinking about that. The cost of capital today is in the mid- to high-single digits or so. And so, I think when we talked about double-digit target returns for investments that we're making. And so I don't know that today that that's something that needs to be under consideration, but certainly we would consider that.

I mean, at the end of the day, as I said earlier, the idea for us is to create shareholder value, to create economic value. And you need to, certainly over a period of time, have a return that exceeds your cost of capital to do that. And so, I don't know that there's [ph] enough to (21:07) update on that here today, but certainly if that were to be the case in the future, it would be something that we would consider.

Patrick Joseph O'Shaughnessy

Analyst, Raymond James & Associates, Inc.

Q

What's your perspective on pricing power across the various businesses, particularly in the backdrop of where your primary futures exchange competitor introduced a greater-than-typical pricing increase in 2023? And we're hearing from some of the other information services providers, they're leaning into pricing a little bit as well.

Warren Gardiner

Chief Financial Officer, Intercontinental Exchange, Inc.

A

Sure. Yeah. So we've – the philosophy around price at ICE has always been around – has been that we wanted to deliver value for the customer and charge for that value once we did. And so, that is how we approach it across the board, across the segment. And we want to know that we've created value with particular products before we do anything [ph] on those lines (21:54).

And so, we are looking at those things. Certainly, there have been some competitors in the exchange space and on the data side that have taken action recently, and so we're looking at that. But generally, that's been the approach that we've had in terms of how we think about [indiscernible] (22:15).

Patrick Joseph O'Shaughnessy

Analyst, Raymond James & Associates, Inc.

Q

Okay. With that, why don't I pause and see if there's any questions in the audience? Go ahead.

Q

[indiscernible] (22:27-22:51)

Patrick Joseph O'Shaughnessy

Analyst, Raymond James & Associates, Inc.

Q

Just for the webcast, let me summarize the question. What is ICE's approach to digital assets right now?

Warren Gardiner

Chief Financial Officer, Intercontinental Exchange, Inc.

A

Yeah, yeah.

Q

[indiscernible] (23:00)

Warren Gardiner

Chief Financial Officer, Intercontinental Exchange, Inc.

A

Yeah.

Q

[indiscernible] (23:02)

Warren Gardiner*Chief Financial Officer, Intercontinental Exchange, Inc.*

A

So, correct, tZERO, Bakkt would be the other investment that we've made in digital assets over the last number of years. When you think about Bakkt, what Bakkt – the definition, if you will, or the inspiration, I should say, behind the name was it's backed by a reputable institution, a regulated institution. And that was the general philosophy there in terms of what we were trying to build within an asset class.

But if it were to institutionalize and really become a bigger asset class, a lot of that would have to happen in some way, shape, or form. And we felt that ICE, with the technology and the expertise we have running markets, and certainly relationships and connectivity we have with regulators and things of that nature, we would be uniquely able to build something along those lines, and that's what we did.

And so, today, we'll see how that asset class further develops. I mean, part of what we were thinking too at the time was that we wanted to have a better understanding of blockchain technology. And so, I think we've accomplished that. But we'll see where that asset class goes. It's obviously at a macro level, if you will. I don't even know if I can call it that, given that it's been more around FTX and things of that nature.

But it's certainly a choppy time. And so, we'll see how things trend for that asset class. But I think from our perspective, the idea of Bakkt was really addressing the problems that I think of – or some of the problems that have been arising around some of what's happened with FTX. And so...

Q

[indiscernible] (24:31)

Warren Gardiner*Chief Financial Officer, Intercontinental Exchange, Inc.*

A

Yeah.

Q

[indiscernible] (24:33)

Warren Gardiner*Chief Financial Officer, Intercontinental Exchange, Inc.*

A

Right. Exactly. And that's how we've been thinking about it. It's just that it's an asset class that's going to be a little volatile for the time. But I think we've got some investments there that are encouraging.

Patrick Joseph O'Shaughnessy*Analyst, Raymond James & Associates, Inc.*

Q

You mentioned your European energy franchise earlier, and that's been, I think, a great long-term growth story for ICE. How much of that is just a function of you have the right product set that's globally relevant versus execution? Or can you not really disentangle those two elements?

Warren Gardiner*Chief Financial Officer, Intercontinental Exchange, Inc.*

A

I think it's tough to disentangle. I wasn't at ICE when they invested in index, which is sort of the foundation for what we have there in European energy. But the view was that natural gas would globalize, much like oil has globalized. And the idea and the premise there was a contract like TCF had some similarities to a Brent, which is the global benchmark for oil. And so, we were attracted to that contract for the same reasons we felt like Brent and had success footprint. And so we've been able to take that benchmark, much like we did with Brent, and then go build around it, adding other sort of basis markets and locational spreads, things of that nature, that has helped develop what today is a global gas market for us.

What we also have are the US basis markets, North American basis markets, so all the different delivery points around North America for natural gas, as well as, of course, Henry Hub, which is the North American benchmark. We also have JKM, the Japan/Korea Marker, which is an important LNG benchmark, but obviously an important marker for Asia. We have a Gulf Coast marker as well.

And so, we really have this global platform that it's not as much where the gas is coming from or where it's going. We have a presence and the ability to help our customers manage risk around the world. And so, as you've seen somewhat of a reconfiguration of the supply chains over in Europe, where LNG is now starting to replace Russian gas that had been coming over previously, and for what it's worth, it's been amazing to see the evolution – the quick evolution over in Europe, where they've rebuilt regasification facilities and storage facilities to make this possible.

But we're really in a unique position as Europe becomes a bigger consumer of LNG to help facilitate those trade flow – the risk management of those trade flows. And so I think it's a really exciting opportunity for us that has obviously come to the front as well but something very unfortunate, but certainly one that we've been positioned for quite some time here and why we've developed all the product sets and all the data and analytics that we have behind all that.

Patrick Joseph O'Shaughnessy*Analyst, Raymond James & Associates, Inc.*

Q

Maybe one last one for me before we wrap it up. One of the best growth stories in 2022 for ICE was your fixed income execution platforms...

Warren Gardiner*Chief Financial Officer, Intercontinental Exchange, Inc.*

A

Yeah.

Patrick Joseph O'Shaughnessy*Analyst, Raymond James & Associates, Inc.*

Q

...the retail bond trading platforms, some institutional flowing and now CDS clearing. Can you maybe speak to why those were so strong in 2022 and what your expectations are moving forward?

Warren Gardiner*Chief Financial Officer, Intercontinental Exchange, Inc.*

A

Sure. So, on the ICE bond side, the fixed income creating municipal bonds, corporate, that have largely been a retail platform when we purchased them – or two platforms that were part – purchased them back in 2018 or so.

And what we've done over the last couple of years is really start to build out more institutional connectivity to those platforms.

During that period, we had really low interest rates. And so there wasn't a whole lot of volumes going through those pipes as we were building them. But as the interest rate environment started to improve this year, that infrastructure, if you will, had been put in place. And so we saw some of those volumes start to come through, and institutions and retail, for what it's worth, come to the platform more so than they were before. And in fact, in the fourth quarter, the percent of activity on our platform from institutions was double the percent it was only just two years ago.

And again, it's just a testament to the efforts that we had undertook to build and start to transform those platforms. So that was a key part that I think, as you're thinking about the go forward, we still have a lot of opportunity to continue to build on and certainly I think now proven that there's some success there, so albeit some more to go.

On the CDS side, what you really see in there, and we continue to add new instruments, we've launched products like options. So there's opportunities for us to continue to grow there on more of a structural growth basis. But certainly, in an environment where interest rates are moving higher and credit risk is more at the forefront, you have recession headlines, things of that nature, it certainly is something where demand for CDS is increasing. So that certainly helps volumes on that platform as well.

So it's a really good result to help that overall segment grow for the year at double-digits, grew operating income by 30% for the year, margins expanded by 500 basis points. It was a really nice outcome and I think a testament to the all-weather, again, nature of the business even at a segment level in this case.

Patrick Joseph O'Shaughnessy*Analyst, Raymond James & Associates, Inc.*

All right. Terrific. Well, on that note, we will wrap it up. But thank you, everybody, for joining us, and thank you, Warren.

Warren Gardiner*Chief Financial Officer, Intercontinental Exchange, Inc.*

Yeah. Thanks, Patrick.
