MANAGEMENT DISCUSSION SECTION

Richard Henry Repetto

Analyst, Piper Sandler & Co.

Okay. Welcome back. And I'll repeat, the 20th Annual Global Exchange & FinTech Conference. We're getting to some of the mainstays of the conference that have been here since the beginning. So it's my pleasure to introduce the Chairman and CEO of ICE, the Intercontinental Exchange. Jeff started – I don't have the name, in – I know went public in 2005.

Jeffrey Craig Sprecher

Founder, Chair & Chief Executive Officer, Intercontinental Exchange, Inc.

2005.

Richard Henry Repetto

Analyst, Piper Sandler & Co.

But what was the...

Jeffrey Craig Sprecher

Founder, Chair & Chief Executive Officer, Intercontinental Exchange, Inc.

Continental Power Exchange.

Richard Henry Repetto

Analyst, Piper Sandler & Co.

The Continental Power Exchange.

Jeffrey Craig Sprecher

Founder, Chair & Chief Executive Officer, Intercontinental Exchange, Inc.

And then I decided it should be Intercontinental and it shouldn't be limited to power, and that's how the name came.

Richard Henry Repetto

Analyst, Piper Sandler & Co.

Jeff, thank you for participating all these years. And I would say what has been an experience is we had a running joke that Jeff would lay breadcrumbs of his ideas of where some of the strategies were going, whether it be about clearing, whether it be about taking data and algorithms and perfecting the exchange model into new places like mortgage. But anyway, it's been great watching you innovate.

QUESTION AND ANSWER SECTION

Richard Henry Repetto

Analyst, Piper Sandler & Co.

So I guess first question would be, as you look at the global economy, because ICE has significant assets both in Europe, US, and does business beyond that as well, especially with the crude oil, et cetera...

Jeffrey Craig Sprecher

Founder, Chair & Chief Executive Officer, Intercontinental Exchange, Inc.

Right.

Richard Henry Repetto

Analyst, Piper Sandler & Co.

So when you look at the global economy, what are you seeing? You're more focused on what happens in Europe, what happens even in Dubai and...

Jeffrey Craig Sprecher

Founder, Chair & Chief Executive Officer, Intercontinental Exchange, Inc.

Right.

Richard Henry Repetto

Analyst, Piper Sandler & Co.

...and in the Middle East, so global outlook.

Jeffrey Craig Sprecher

Founder, Chair & Chief Executive Officer, Intercontinental Exchange, Inc.

Well, first of all, let me – there's a lot of old friends in this room. So it's great to see your faces. And Rich worked on our IPO. So he and I worked together in 2005 and I just have always regarded you highly. And I always wanted to do this conference and appreciate everything you've done to support our company. And we always have Rich to go first on our earnings call as you know...

Richard Henry Repetto

Analyst, Piper Sandler & Co.

And there was no bribery.

Jeffrey Craig Sprecher

Founder, Chair & Chief Executive Officer, Intercontinental Exchange, Inc.

...which is – well, it's a testament to the fact that...

A

Richard Henry Repetto

Analyst, Piper Sandler & Co.

Thank you.

Q

Jeffrey Craig Sprecher

Founder, Chair & Chief Executive Officer, Intercontinental Exchange, Inc.

...you and I work together to build this company to a certain degree, and so thank you very much. And we're going to miss you.

A

Richard Henry Repetto

Analyst, Piper Sandler & Co.

Thank you.

Q

Jeffrey Craig Sprecher

Founder, Chair & Chief Executive Officer, Intercontinental Exchange, Inc.

Yeah. It's interesting because we're somewhat feeling a sense of optimism. And I think it was almost like for two years, everybody said recession was right around the corner and people were looking at consumer spending and consumer savings and credit cards and all this. And everybody said all the lines are going to cross and everybody's going to run out of money and we're going to go into recession.

A

And then I felt like earlier this year, maybe the market just got tired of saying that. And we mentioned on our earnings call, for example, that in our mortgage space, two-thirds of the people that are up for renewal on their contracts are renewing at higher volumes than they had before, which is a – one segment of a global economy, but it's somewhat indicative of what we're seeing around the world, which is there's a sense that things are going well.

In Europe, it was only last year that people were saying that there were going to be people dying in their homes for lack of energy and so on and so forth. And now, just a year later, like, everybody's like, oh, yeah, we solved the energy delivery problems. We've redone the supply chains and everything is fine. And so it's a long-winded way of saying globally we feel sort of a sense of optimism with everybody having a little asterisk by it saying, yeah, but there still could be some catastrophic economic issue out there. But it seems like they're taking it less seriously now, and we can see it in our contract renewals across the business.

Richard Henry Repetto

Analyst, Piper Sandler & Co.

I mean, when you look at your – ICE's exposure, whether it be in crude oil products, particularly – European, it's a global crude. Brent is global.

Q

Jeffrey Craig Sprecher

Founder, Chair & Chief Executive Officer, Intercontinental Exchange, Inc.

Right.

A

Richard Henry Repetto

Analyst, Piper Sandler & Co.

Q

But exposure right there to sort of the geopolitical risks, when you look at rates, the short-term Euribor contract and mortgage as well. So is there any particular – these businesses have improved and you have easier comps in energy. So is there any particular business that you think will thrive? And the flip side of the coin, is there anything you're monitoring closely?

Jeffrey Craig Sprecher

Founder, Chair & Chief Executive Officer, Intercontinental Exchange, Inc.

A

Yeah. It's good question, because really – I'm an engineer by education and I think like an engineer, and I still was able to find a great bride who is willing to deal with me. But she – I really wanted the company to be an all-weather stock. We use that word. We talk about it that some part of our business will do well in a high interest rate environment. Some part will do well in a low interest rate environment. Some part will do well if we have inflation. Some will do well if we have deflation.

And so the parts of the business that are slowing are sort of calculated in this environment to do that and the parts that are rising are calculated in our minds to do that. And it all seems to be – and the net total is growth. And it all seems to be working pretty well. We run pretty much the global credit default swap market, which credit default swap is – if you don't follow that market, it's essentially protection against somebody with a bond defaulting. And we had the biggest bond issuer almost default, the United States.

And I don't know. It's just like we just kind of blew right through that, right? And our business is doing well there. And so I don't know how to explain it other than there seems to be a sense that it's all going to work out. And ICE has a lot of products that help people hedge risk, and they're sort of being used around the world.

With respect to Brent, it's interesting, I mean, I've been at this conference for so many years. There have been years when some of you in the room have grabbed me and said, do you think this is the end of crude oil trading? And we're becoming a less carbon-based society. And yet, our – and you could have that view. And yet, our crude oil is trading at record volumes. But then similarly, we're helping people with energy transition. So our emissions contracts, our renewable energy contracts, our green contracts, even natural gas, which is a transition for many economies from coal and crude to something greener, they're all doing well.

I mean, you would – when we talk – when we built that complex, we thought we need to have the tools to make a transition. And one will go down and another will go up and it will be part of the all-weather name and never thinking, is it possible they could all go up? And they are. And so we feel very good about the business right now, even though I don't – as an individual, I don't – I'm not confident that we're not going to go through a recession, but I'm just not seeing any signs of it in our customer base.

Richard Henry Repetto

Analyst, Piper Sandler & Co.

Q

I think you captured it, things look good, but you're – everybody's a little bit reserved.

Jeffrey Craig Sprecher

Founder, Chair & Chief Executive Officer, Intercontinental Exchange, Inc.

A

Yes.

Richard Henry Repetto

Analyst, Piper Sandler & Co.

Okay.

Q

Jeffrey Craig Sprecher

Founder, Chair & Chief Executive Officer, Intercontinental Exchange, Inc.

Yeah.

A

Richard Henry Repetto

Analyst, Piper Sandler & Co.

The theme of the conference is a celebration of electronic trade. So – and we had [indiscernible] (00:08:30) classmate.

Q

Jeffrey Craig Sprecher

Founder, Chair & Chief Executive Officer, Intercontinental Exchange, Inc.

Saw that, yeah.

A

Richard Henry Repetto

Analyst, Piper Sandler & Co.

[indiscernible] (00:08:33) we did talk a little bit about hockey. But if anybody epitomizes bringing things electronic, the theme of electronic trading, I was there when you brought the – not only the power exchange, but the IP in London, whether the New York Board of Trade. So I guess the question is, that brings us right to mortgage, and you talk about the different businesses and diversification. But this theme of electronics is not stock with you.

Q

Jeffrey Craig Sprecher

Founder, Chair & Chief Executive Officer, Intercontinental Exchange, Inc.

Right.

A

Richard Henry Repetto

Analyst, Piper Sandler & Co.

And I guess the question is, as you look at it now, timing, you don't control the interest rate cycle.

Q

Jeffrey Craig Sprecher

Founder, Chair & Chief Executive Officer, Intercontinental Exchange, Inc.

Right.

A

Richard Henry Repetto

Analyst, Piper Sandler & Co.

But has it lived up to your expectations in regards to sort of the momentum of conversion?

Q

Jeffrey Craig Sprecher

Founder, Chair & Chief Executive Officer, Intercontinental Exchange, Inc.

Yeah. It's a great question. First of all, when I started ICE, Vinnie was – Vinnie Viola was at NYMEX and was doing everything in his power to prevent us from doing what we were doing and...

A

Richard Henry Repetto

Analyst, Piper Sandler & Co.

[indiscernible] (00:09:36).

Q

Jeffrey Craig Sprecher

Founder, Chair & Chief Executive Officer, Intercontinental Exchange, Inc.

A

...including trying to buy us and sued me. And we went – he and I went all the way to the Supreme Court and ultimately ICE won. But he and I have been longtime friends and colleagues. I have tremendous respect for him even though – and then he saw the light and he's probably done better than anybody in this room embracing electronic trading.

Yeah. So it's interesting, I kind of have a dual answer, which is I'm surprised that some company that was never in the mortgage business is able to actually go into a brand new business and effect massive change and it's working. Like, it's really pretty surprising. Like, there is – the mortgage business is kind of at the heart of the banking business. It is the largest consumer loan, then banks really are in the loan business and we've evolved the corporate borrowing into the bond market now. And so that's kind of the mainstay of banking and yet somehow with thousands of banks and millions of borrowers, nobody has ever just said we should automate this process and streamline it in the way we're doing it.

And so I'm kind of surprised that we're the ones doing it. It's definitely being embraced. We are really growing the parts of the business that we have. We're trying to acquire some other pieces and in an argument with the government over that, which I think if we can affect that merger, that will be really able to affect change and benefit consumers even beyond what we're already doing. But the government will suggest that we would be very, very powerful. And I suggest that it's going to take a powerful entity to change behavior for an entire industry. So that's kind of the argument we're having. But we're doing well.

And if you go back to the history of ICE, which, Rich, you witnessed, reported on diligently for years, I started the company, but it became successful when Enron collapsed and we went into a minor, call it, recession and a rethinking of corporate governance and everything that was surrounding that. And then we took off for energy trading.

And then I started working on the credit default swap market in 2007. In 2009, there were – we had a financial crisis and our CDS business took off. New York Stock Exchange, that stock was once like \$120 a share and it went down to \$22 and it was an unloved company. And we stepped in and have completely rebuilt every piece of technology and that company is brand new. And we built that bridge while the cars were driving on it and, in fact, driving 60 miles an hour over the bridge.

These inflection points in businesses and in the economy are really the time that entrepreneurs should be building businesses. We just – we did announce recently one of the world's largest banks is going on to our mortgage system. A couple of years ago, when mortgages were rock and rolling, they had mortgages coming out of their ears.

And if you – when you go in and talk to them about, would you like to abandon everything you built and have us rebuild it on a different way? They were like, we don't need to do that. We got so much business here, I can't even keep up with it. But it's times like this when you can go in and talk to managers and say, now is the time to get ready for the next cycle and we've done that over and over and over again.

So while you can't choose your timing, as you're right, when you do have these moments, you really got to lean into them. And most entrepreneurs think the time to build a business is when money is free and everybody is doing well. It's a good time to raise money, but it's not necessarily the good time to build the business. All of the big tech companies, if you go back and look at them, they all came out of the dotcom boom, all their competitors fell away and then they became these monoliths. And so I like these periods, even though you got to navigate them.

Richard Henry Repetto*Analyst, Piper Sandler & Co.*

Q

I got to take the liberty to tell one story. It's my last conference, so I'm going to – but Jeff told me, and I've repeated this story over the years, but back right before the financial crisis, we're talking in volumes that the exchanges had ballooned and increased. And he said the CEOs of exchanges, we've had it easy because electronification had boosted volumes. He was, where I see things going is more towards the back office, more towards clearing, more – but things that aren't the sexy upfront matching engines. As I joked with Jeff, I said, no, it did take a financial crisis and the truth of the story is he went out, bought clearing assets, the Chicago Clearing Board?

Jeffrey Craig Sprecher*Founder, Chair & Chief Executive Officer, Intercontinental Exchange, Inc.*

A

Yeah. The old Board of Trade Clearing Corporation...

Richard Henry Repetto*Analyst, Piper Sandler & Co.*

Q

Yes.

Jeffrey Craig Sprecher*Founder, Chair & Chief Executive Officer, Intercontinental Exchange, Inc.*

A

...which at one point was the largest clearing organization in the world. But then after they moved their business to CME, it went to zero, but I – but it had all the infrastructure there.

Richard Henry Repetto*Analyst, Piper Sandler & Co.*

Q

There you go. And lo and behold, I think governments now look at clearing as a systematic, is that important, swaps were forced into clearing to try to reduce overall systematic risk.

Jeffrey Craig Sprecher*Founder, Chair & Chief Executive Officer, Intercontinental Exchange, Inc.*

A

Right. Well, and you're going to be talking to Chair Gensler here shortly. There are still assets that are not cleared that the government – for example, the treasury market and the Chair has talked a lot about treasuries. And we sort of had a near-death experience in treasuries on whether there's going to be a default. And certainly, we saw Silicon Valley Bank and other large regionals that had tons of treasuries on their balance sheet that turned out to be much to their demise. And so [ph] there's another (00:16:00) asset class that even something that's considered the gold standard of assets by people around the world, you still have regulators saying maybe those should be cleared.

Richard Henry Repetto

Analyst, Piper Sandler & Co.

Q

[indiscernible] (00:16:14) question if we can get them off of equity market structure and crypto, right? Another asset class that you've delved into is the fixed income data business – data and analytics.

Jeffrey Craig Sprecher

Founder, Chair & Chief Executive Officer, Intercontinental Exchange, Inc.

A

Yeah.

Richard Henry Repetto

Analyst, Piper Sandler & Co.

Q

It's another asset class that hasn't moved somewhat. It moved somewhat electronically, but it hasn't gone full-fledged. I guess, what are your thoughts on how you're positioned? I know you've done well in munis. The business is recurring. It continues to grow consistently. But what are your thoughts about that asset class?

Jeffrey Craig Sprecher

Founder, Chair & Chief Executive Officer, Intercontinental Exchange, Inc.

A

Yeah. So I've been transparent that we were late to get into that class, and Bloomberg and MarketAxess and Tradeweb had already started the analog to digital conversion of trading. And so – and clearing is – and the consolidated tape is basically an industry utility. And so we looked at it and said we want to be in that business because there is an analog to digital conversion. Where are the points that all of those people are ignoring and that's really how we got into the business that we're in. It was an area that we were late. I didn't see it as early as some of those guys. Actually we saw it and we didn't think it would be as valuable as it's become.

And so we said, okay, we think fixed income is going to be traded. Owning a bond is hard. And particularly for consumer or family office, we think there's going to be more ETFs built that are going to make a different kind of security that will be easier to own. And you want to build a ladder. And also, those people are going to need indexes and they're going to need to mark to market and they're going to need all these back office services.

And so that's – going back to your earlier comment, it was an obvious area to us where we thought we could lean into and do well and we are doing well there. We also saw that the platforms that I mentioned were really focused on the corporate bond market. And we said there's also – there's a government bond market and there's also – which people – some of our peers and competitors are in. And – but we saw this municipal bond market, which largely, if you don't follow that, it's retail-oriented because they're tax exempt. And so they have a particular allure to small family offices, small institutions, and retail, which is not the client base that those bigger platforms were going for.

So we said let's go there, and it's done well. And we do have such a big footprint globally that we're able to take that sort of retail-type market and expose larger institutions to it who do want to participate and see that flow and see trading opportunities even through the real-what we call the paper, the paper and oil are the big oil companies. The paper in the muni market are the – are retail consumers and their advisors. But others want to interface with the paper. And we're doing – it's taken a while. We rebuilt a lot of the highways to get people to it. But it seems to be doing really well now. So feel good about it.

There was kind of a pause here, as interest rates went up with some of the large fixed income managers on what they were going to do and are we going to recession? There was kind of fear in the market, I would say, a year

ago. I think we were talking about this. But that seems to now be pretty much dissipating except for the one little asterisk where everybody says, it could happen.

Richard Henry Repetto

Analyst, Piper Sandler & Co.

Q

I wanted to leave plenty of time for the last question. But the only thing about fixed income, it does seem like it's going in – I don't – not an evolution, but the – more demand for real-time pricing.

Jeffrey Craig Sprecher

Founder, Chair & Chief Executive Officer, Intercontinental Exchange, Inc.

A

Yes.

Richard Henry Repetto

Analyst, Piper Sandler & Co.

Q

And how – will you be able to move – be flexible enough to participate?

Jeffrey Craig Sprecher

Founder, Chair & Chief Executive Officer, Intercontinental Exchange, Inc.

A

Yeah. So only a small percentage of the fixed income market trades every day that can discover a real-time price. So the vast majority, it's certainly over 80%, it may even be over 90% of the instruments that are in the world don't trade, so they – and they still need – people want real-time pricing because they may be thinking about selling them. And they certainly need end of day pricing to mark to market.

And so that's all done through algorithms. And we have developed – a predecessor company that we acquired has been developing those algorithms for a decade. And they've had constant feedback from the market and they continue to get constant feedback. So very hard to replicate, particularly because it's not just having the algorithm, it's having confidence in the algorithm that you'd actually stake your own money on the output of that algorithm.

So I don't think that's going to go away just because of the nature of fixed income. I really think that it's – the real-time market is going to be on the run, large names, recently issued kinds of transactions. And the vast majority that are going to be sitting in ETFs and in fixed income managers are sedentary but still need real-time pricing. That's the kind of thing we can do.

Richard Henry Repetto

Analyst, Piper Sandler & Co.

Q

I've waited, of all the CEOs to step up here, I think I wanted to ask you this question [indiscernible] (00:21:57) and it's because of your expertise and knowledge of bringing markets electronic. And it's a technology question to wrap up. We're seeing – as far as society, we're seeing advancements in technology with AI, with ChatGPT. But you've sort of, what you call, created the framework to think about this, at least to me even prior when you talked about taking in massive amount of data, processing that data to instantly efficiently make decisions, at least – again, I rate myself a two on a scale of 10 of knowledge of ChatGPT. But anyway, the question is, where does this tech – does this technology have a role to play in the trading business, in the exchanges business, in the clearing business, because I know your weekly – whether it's a weekly or biweekly strategy session, I just suspect you might have discussed it.

Jeffrey Craig Sprecher

Founder, Chair & Chief Executive Officer, Intercontinental Exchange, Inc.

A

Yeah. No. We've been really talking about trying to figure it out like everybody. So a lot of our peers have done deals with the big cloud providers and are doing prototype work around this. And we've gone just the other way, which is all – a lot of AI and language providers have approached us, let's do some benchmarking and prototyping and what have you and we say to them, okay, great. We have one of the largest financial databases in the world of both third party information who use our networks and our own proprietary information.

We say to them, why don't you give us one of your prototypes and we'll run it in our data center? And they say, well, why don't you give us our data and – your data and we'll run it in our data center? And we say, well, we're in the data business and you're in the software business. We should just license your software and then we'll control it in our environment. And they're like, no, no, no. You don't understand. We're doing this – we need all this computing power and you got to do it in our environment.

And so our [indiscernible] (00:24:21) have gone up that – wait a minute. When we were trying to ask questions about who owns the data, what is the title, what are the copyright protections, how – if there is a consumer use of this, how will we charge for it? Who will bill it? And none of those questions are answered. And so we have – and our company said no one can bring that stuff into our data center and we've gone and got a team and we're going through all of the data that we have, every little nook and cranny.

And we're inventorying it and asking ourselves, what are our proprietary crown jewels? What are some interesting pieces of data, but they may be available elsewhere? And what is really public domain data that is ubiquitous but happens to be in our data center? And we need to know that. And know – I talk a lot on earnings calls that in a grocery store, you have to have milk, butter, and eggs. But everybody makes their money selling rotisserie chicken. But you got to have milk, butter, and eggs to get somebody to come to the store.

And so I want to know what are our rotisserie chickens, and what is the milk, butter, and eggs? And until we can figure out how we can perfect our ownership rights in that, we're not going to let any of this stuff get nearby. I'm happy to let one of my peers go figure that out. But we haven't been able to and we haven't been able to get straight answers yet.

I think ultimately there's going to be a lot of open source models. I think universities and others are working on these things. They will be open source models and the software itself will not be particularly valuable. What will be valuable is the data set that that software runs on. And I think ultimately we and lots of our peers in financial services will have these models available in our networks and data centers. And the people that run these models will be doing so in our container and not – and this stuff will not get comingled with the broader information that's on the World Wide Web. That's my guess.

Richard Henry Repetto

Analyst, Piper Sandler & Co.

Q

We're going to check those breadcrumbs out. Those are the breadcrumbs to follow.

Richard Henry Repetto

Analyst, Piper Sandler & Co.

Unfortunately, we are – time is up. But I want to thank you for, Jeff and [ph] Kelly (00:26:48) for your friendship over the years. Watching you grow this multibillion [indiscernible] (00:26:54) enterprise now, has been an experience.

Jeffrey Craig Sprecher

Founder, Chair & Chief Executive Officer, Intercontinental Exchange, Inc.

And I will see you soon because we've asked Rich to come in and ring the bell at the New York Stock Exchange in honor of all the work you've done. So thank you.

Richard Henry Repetto

Analyst, Piper Sandler & Co.

Which is an honor.

Jeffrey Craig Sprecher

Founder, Chair & Chief Executive Officer, Intercontinental Exchange, Inc.

Yeah.

Richard Henry Repetto

Analyst, Piper Sandler & Co.

Thank you.

Jeffrey Craig Sprecher

Founder, Chair & Chief Executive Officer, Intercontinental Exchange, Inc.

Great.
