FORWARD-LOOKING STATEMENTS AND NON-GAAP FINANCIAL MEASURES

This presentation contains "forward-looking" statements that are based on our beliefs and assumptions and on information currently available to us. Forward-looking statements include all statements other than statements of historical fact, including information or predictions concerning our future financial performance; business plans and objectives; potential growth opportunities; new products; manufacturing capacity; financing plans; component and manufacturing costs; competitive position; technological or market trends; industry environment; potential market opportunities; partnership expansion with SK ecoplant and timing of investment; and our outlook for fiscal 2021. Forward-looking statements are subject to known and unknown risks, uncertainties, assumptions, and other factors including, but not limited to, our limited operating history; the emerging nature of the distributed generation market and rapidly evolving market trends; the significant losses we have incurred in the past; the significant upfront costs of our Energy Servers and our ability to secure financing for our products; our ability to drive cost reductions and to successfully mitigate against potential price increases; our ability to service our existing debt obligations; our ability to be successful in new markets; the success of the strategic partnership with SK ecoplant in the United States and international markets; timing and development of an ecosystem for the hydrogen market, including in the Korean market; continued incentives in the South Korean market; the timing and pace of adoption of hydrogen for stationary power; the risk of manufacturing defects; the accuracy of our estimates regarding the useful life of our Energy Servers; delays in the development and introduction of new products or updates to existing products; the impact of the COVID-19 pandemic on the global economy and its potential impact on our business; the availability of rebates, tax credits and other tax benefits; our reliance on tax equity financing arrangements; our reliance upon a limited number of customers; our lengthy sales and installation cycle, construction, utility interconnection and other delays and cost overruns related to the installation of our Energy Servers; business and economic conditions and growth trends in commercial and industrial energy markets; global economic conditions and uncertainties in the geopolitical environment; overall electricity generation market; our ability to protect our intellectual property; and other risks and uncertainties detailed in our SEC filings from time to time.

You should not rely upon forward-looking statements as predictions of future events. Although we believe that the expectations reflected in our forward-looking statements are reasonable, we cannot guarantee that the future results, performance, or events and circumstances described in the forward-looking statements will be achieved or occur. Moreover, neither we, nor any other person, assume responsibility for the accuracy and completeness of the forward-looking statements. We undertake no obligation to update any forward-looking statements for any reason after the date of this presentation to conform these statements to actual results or to changes in our expectations, except as required by law. These forward-looking statements should also be read in conjunction with the other cautionary statements that are included elsewhere in our public filings, including under the heading "Risk Factors" in our Quarterly Report on Form 10-Q for the quarter ended June 30, 2021 and subsequent filings with the SEC filed from time-to-time.

This presentation includes certain non-GAAP financial measures as defined by SEC rules. These non-GAAP financial measures are in addition to, and not a substitute for or superior to, measures of financial performance prepared in accordance with U.S. GAAP. There are a number of limitations related to the use of these non-GAAP financial measures versus their nearest GAAP equivalents. For example, other companies may calculate non-GAAP financial measures differently or may use other measures to evaluate their performance, all of which could reduce the usefulness of our non-GAAP financial measures as tools for comparison. We urge you to review the reconciliations of our non-GAAP financial measures to the most directly comparable U.S. GAAP financial measures set forth in the appendix to this presentation and in our earnings release, and not to rely on any single financial measure to evaluate our business. With respect to our expectations regarding our 2021 Outlook, we are not able to provide a quantitative reconciliation of non-GAAP gross margin and non-GAAP operating margin measures to the corresponding GAAP measures without unreasonable efforts.

An aerial, high-angle view of a large-scale solar farm. The solar panels are arranged in long, parallel rows that stretch across the landscape. The perspective is from directly above, looking down at the panels, which are a dark, monochromatic color. The rows are separated by narrow paths or access roads. The overall tone is professional and clean.
