Stock Exchange	NYSE Arca
Distributor	Quasar Distributors, LLC

RISK & SOLUTION

Now is not the time to be Indifferent About Inflation

Government Stimulus has **expanded M2** at a rate not seen since WW2

More **stimulus** will almost certainly be needed

Commodity prices have experienced a multi-decade period of negative returns (GSCI)

Interest Rates are the lowest in over 200 years, and negative in real terms

Our ability to **source inexpensive** goods and labor may be ending

America's "binary" wealth distribution is likely to lead to higher wages

Inflation is a risk that rationally should be hedged

INVESTMENT CRITERIA

**Low capital requirements**

In a low rate world, future financing is a risk

**Undiscovered assets**

Inflation-correlated dormant assets

**Exposure to real assets**

Energy, precious metals, limited supply asset

**Price-driven revenue**

Transaction-based, low fixed expense

**Cash flow vs asset price**

Less focus on price risk vs volume delivered

**Misunderstood value**

Unique data, process, research driver

**Pricing power**

Unique products with growing future need

**Re-investible yield**

Long-term value through yield driven growth

- 18 Investment Professionals with an average tenure of 15 years with the firm and 27 years in the industry.
- Solutions centered investing.

DISCLOSURES

Please consider carefully a fund's investment objectives, risks, charges and expenses. For this and other important information, obtain a statutory and summary prospectus by contacting 646-495-7333. Read it carefully before investing.

A registration statement relating to these securities has been filed with the Securities and Exchange Commission but has not yet become effective. These securities may not be sold nor may an offer to buy be accepted prior to the time the registration statement becomes effective. This communication shall not constitute an offer to sell or the solicitation of an offer to buy nor shall there be any sale of these securities in any State in which such offer, solicitation or sale would be unlawful prior to registration or qualification under the securities laws of any such State.

Investing involves risk, including the possible loss of principal. Shares of any ETF are bought and sold at market price (not NAV), may trade at a discount or premium to NAV and are not individually redeemed from the fund. Brokerage commissions will reduce returns. The Fund's investments in securities linked to real assets involve significant risks, including financial, operating, and competitive risks. Investments in securities linked to real assets expose the Fund to adverse macroeconomic conditions, such as a rise in interest rates or a downturn in the economy in which the asset is located. The Fund is non-diversified, meaning it may concentrate its assets in fewer individual holdings than a diversified fund. Therefore, the Fund is more exposed to individual stock volatility than a diversified fund. The fund invests in foreign securities which involve greater volatility and political, economic and currency risks and differences in accounting methods. These risks are greater for investments in emerging markets. The fund may invest in the securities of smaller and mid-capitalization companies, which may be more volatile than funds that invest in larger, more established companies. The fund is actively managed and may be affected by the investment adviser's security selections.

Diversification does not assure a profit or protect against a loss in a declining market.

Active ETF refers to investment strategies that emphasize the use of alternative weighting schemes to traditional ETF tracking market capitalization based indices.

Market Capitalization is the value of the fund as determined by the market price of its issued and outstanding stock. The Weighted Average Market Capitalization of a portfolio equals the average of each holding's market cap, weighted by its relative position size in the portfolio (in such a weighting scheme, larger positions have a greater influence on the calculation). Price-Earnings Ratio (P/E Ratio) is determined by dividing the price of the stock by the company's forecasted earnings per share. Fund holdings and allocations are subject to change at any time and should not be considered a recommendation to buy or sell any security.

M2 is a calculation of the money supply that includes all elements of M1 as well as "near money." M1 includes cash and checking deposits, while near money refers to savings deposits, money market securities, mutual funds, and other time deposits.
