Description

I expect this may be a controversial stock pitch as I was highly skeptical to start. At first glance, life settlements trigger the usual concerns: ethics, model risk, mark-to-model accounting, and headline risk. **Management owns \$500 million in stock or 50%+ of the outstanding shares.** They are sharp with the former Co-Head of Specialty Finance @ KKR as the CCO. This misperception at the core has led to what we view as a highly favorable risk-reward, as we see a business that has downside to \$5-6 and upside over the next 18-24 months to \$20+. ABX roughly ~9.2x 2025E consensus adjusted EPS \$0.79 cents and ~7.4x 2026E \$0.98 cents despite strong growth and high ROIC. The core thesis is that this business has four segments and that it is evolving into a high-growth, high-margin business run by a management team that owns \$500 million or 60% of the company. ABX has four legs a) Life Solutions: life settlements on their balance sheet under 20% of policies w/ average age 88 years old b) Wealth Advisory: insured's cash out and reinvest their capital into their funds they have 4 ETF's on the NASDAQ c) Asset Management: manage about \$2.3 billion in policies with 1.5% management fee 6% hurdle and 20% carry d) Technology solutions: data sales.

Capital Leg	ABX Management Segment(s)	Duration	Capital Intensity	Return Profile	What It Does Economically
Origination	Life Solutions	Instant	Low	Embedded option value	Sources and underwrites policies below clearing price; creates basis and optionality for trade, hold, or fee monetization
Trading	Life Solutions + Wealth Advisory	Short	Low-Medium	High ROIC, fast turns	Sells policies to institutional / wealth channels; realizes gains (+25-36%), recycles capital ~2x per year
Hold	Life Solutions (Balance Sheet Capital)	Long	High	High IRR, volatile timing	Retains select policies (<20%) to capture full mortality premium; capital-intensive, duration-driven returns
Asset Management	Asset Management Group + Technology Solutions	N/A	Very Low	Stable, recurring	Manages third-party capital, ETFs, securitizations, and sells proprietary data; fee-based, scalable, highest multiple

Abacus Life operates in a regulated secondary market that provides seniors with a third option beyond lapsing or surrendering a life insurance policy for little or no value. By educating policyholders and working through licensed brokers under state insurance regulation, Abacus helps unlock fair market liquidity from a stranded financial asset, often used for healthcare, retirement, or estate planning. The business relies on independent medical and actuarial underwriting, mandatory disclosures, and documented consent — making it a transparent, market-clearing function rather than a predatory or speculative one. Frequently high customer satisfaction leads insureds who cash out invest their proceeds into ABX's diversified ETFs, which have roughly \$800 million in AUM and \$3 billion under total AUM and have underwritten \$10 billion in total premium.

It is important to note that:

- **90% of Life Policies LAPSE, w/o ever paying or roughly 10 million policies a year, & 75% of life policy holders would sell if they knew this option existed.**
- Over the next 5 years 13-15 million baby boomers will die.
- ABX only keeps 13-19% of policies on their own books with average age of 88 years old.
- ABX averages gain on sale of +25% and most recently 36% and turns their book twice a year.
- ABX has underwritten \$10 billion in policies since inception.

- If all US life insurance policies paid out tomorrow, it would be \$11 trillion dollars.

What is the track record:

https://www.open-funds.ch/sites/default/files/2025-06/Absolute%20Return%20Fund%20IV%20-%20Fund%20Factsheet%202025_NEW.v2_0.pdf

PROFESSIONAL INVESTOR USE ONLY

Our Firm

Carlisle Management Company S.C.A (CMC) is an AIFMD-compliant, Luxembourg-based fund management firm focused on the secondary life insurance market in the United States. Carlisle Management is wholly-owned by Abacus Global Management. CMC operates the Luxembourg Life Funds, offering institutional investors access to life settlement investments. Boasting one of the most experienced team in the industry, CMC provides management services to institutional investors.

What sets Carlisle apart?

- 80+ years of combined hands-on experience in secondary life insurance market
- Proven firm track record since 2009
- More than \$2.2B in AUM
- Efficient Sourcing
- Tax transparent and regulated investment structures
- Solid valuation and LE underwriting methodologies
- As part of Abacus Life, is the largest secondary life insurance origination company and asset manager globally

Track Record – Luxembourg Life Funds

	All	Realized
# Policies	4342	2699
Total Face Value	\$9.9B	\$5.8B
Total Disposal Realized or Current Valuation	\$4.7B	\$2.8B
Gross Annualized IRR	12.9%	24.2%
MOIC Multiple	1.27x	1.48x

Fund Strategy

The Fund is the fourth in a series of funds focusing on secondary life insurance market in the US, which provides consumers with a much-needed option where they can receive substantially more than the cash surrender value.

The Absolute Return Fund IV's investment strategy is to build a large, diversified portfolio across numerous sectors, including but not limited to carrier concentration, expected maturities, gender, age, impairment, geography, and face value. To properly implement a buy-and-hold-to-maturity strategy, the fund seeks to isolate mortality risk and build a large sample size. It employs detailed actuarial and financial analysis to ensure that policies purchased account for longevity risk as well as other variables of the actuarial profile, with substantial stress testing to control extension risk.

Proprietary Data: Buyers CALPERS, Texas Teachers, and other insurance and pension funds.

Abacus touches tens of thousands of life insurance policies annually across origination, medical underwriting, actuarial life-expectancy modeling, pricing, secondary market transactions, and policy servicing. As a result, it has built one of the deepest proprietary datasets in the life-settlement ecosystem.

From this activity, ABX generates four core data layers:

- (1) **Mortality & longevity data** — anonymized health profiles, realized mortality versus actuarial expectations, and cohort survival curves;
- (2) **Policy economics & behavior** — lapse rates, premium persistence, and pricing dynamics;
- (3) **Transaction and market-clearing data** — real bid/ask prices, time-to-liquidity, and realized gains; and
- (4) **Portfolio risk and performance data** — turnover, duration, loss curves, and stress outcomes.

This data is sold to **state regulators, pension funds, insurers, reinsurers, banks, rating agencies, and institutional asset managers**, all of whom rely on it for reserve modeling, securitization analysis, and longevity risk management. The dataset is effectively **irreplicable** due to scale, history, and real transaction outcomes.

Short Story:

In June 2025, a short report from Morpheus alleged that ABX was overstating asset values through aggressive life-expectancy assumptions (specifically referencing Lapetus) and modest discount-rate adjustments (e.g., 20% to 18% in Q1), attributing roughly \$28 million of value creation to these changes and drawing comparisons to the GWG Holdings failure. We believe these claims are not supported by the data and misunderstand how ABX's business model actually realizes value.

First, ABX's pricing is market-clearing, not model-clearing. Policies are routinely sold into an active secondary market with **15–17 independent institutional counterparties per quarter**, providing real-time price discovery. Valuation marks are not set in isolation: third-party actuarial firm **Lewis & Ellis** independently reviews portfolio valuations and has historically validated ABX's marks **within ~1%**, materially reducing model-risk concerns.

Second, realized outcomes, not theoretical marks, are the dominant economic driver. In Q3, ABX reported **36.9% realized gains on policy sales**, while in Q2 — *after* the short report—ABX generated **+1.65% realized gains on \$141 million of transactions**, directly contradicting the notion of systemic overvaluation. This is not a long-duration, levered, mark-to-model structure; the company turns its book roughly **2x per year**, with less than **20% of policies retained on balance sheet**, sharply limiting exposure to longevity drift.

Third, market behavior has moved against the short thesis. Short interest has declined to **5.93% of shares outstanding (~15% of float)** with days to cover near **11x**, indicating covering rather than pressure building. At the same time, management—who own approximately **60% of the company (~\$500 million)**—has continued to repurchase shares and pay dividends, reinforcing confidence through capital allocation rather than rhetoric.

Finally, headline risk has proven immaterial. January 2026 class-action filings from Schall Law appear to be standard plaintiff-side “event-driven” fishing expeditions; there has been **no SEC enforcement action**, no restatement, and no change in auditor or third-party valuation practices.

January letter to shareholders: after \$10 million buyback Nov, 3% dividend in December, and \$20 million buyback announced in January:

To our team: thank you. You built this. You show up every day like owners because you are owners, and it shows in everything we do.

To our shareholders: thank you for believing in what we are building. Your trust means everything to us, and we work every day to earn it.

2025 was a defining year for Abacus. But as proud as I am of what we accomplished, **I am even more excited about what lies ahead. The foundation is set. The flywheel is turning. And the opportunity in front of us is larger than it has ever been.**

Insiders own over \$500 million in ABX shares:

Abacus Global Management Announces \$20 Million Share Repurchase Program

January 30, 2026

 PDF Version

~ Underscores the Board of Directors Confidence in the Company's Long-Term Business Model, Recurring Earnings, and Capital Strength ~

ORLANDO, Fla., Jan. 30, 2026 (GLOBE NEWSWIRE) -- Abacus Global Management, Inc. ("Abacus" or the "Company") (NYSE: ABX), a leader in the alternative asset management industry, today announced that its Board of Directors has authorized a \$20 million share repurchase program, effective January 30, 2026, as a part of the Company's capital allocation strategy framework.

"This authorization reflects our confidence in the Company's long-term strategy, financial strength, and future growth prospects," said Jay Jackson, Chairman and Chief Executive Officer. "Additionally, this program further positions Abacus for continued growth while enabling shareholders to benefit directly from strong and sustainable earnings."

Abacus expects to fund the share repurchase program through cash on hand and free cash flow. The Company's capital allocation strategy is designed to balance continued investment in origination growth, technology, and acquisitions with the return of capital to shareholders through the share repurchase program.

Subject Thinking About TAM and Competition
Entry 02/09/2026 05:33 PM
Member SKVIC

Thanks for surfacing a fairly interesting name. A few questions:

1. Management has cited a \$13T TAM in life insurance and a ~4% penetration of the life settlements industry. I struggle to wrap my head around how such a large asset class could possibly remain so under-penetrated despite having all the hallmarks of a strong alternative asset class. Do you have any insight on why it has remained so unpenetrated and/or if there are any structural impediments to reaching the size of something like a Private Credit and/or Private Equity?
2. Large Asset managers (APO, BX, KKR, etc.) have a huge incentive to gather fee generating AUM; why haven't they penetrated this opportunity? It seems like the market leader is ABX and there are a handful of other players of size, but it doesn't seem like there is any structural reason that others would not have entered in a meaningful way. Is the crux of the argument that the existing market structure stays this concentrated over the long-term (despite the runway to continue penetration of TAM outlined in 1a) because of the "data advantage" and better underwriting that ABX purportedly has?

SKVIC: Thanks for the questions.

1): This is a very difficult market to underwrite well and at scale. It starts with a funnel: ABX runs TV ads and uses other channels and in their presentation they have a funnel of a large amount of policies of which they make offers on very few policies. They require all HIPPA medical records, they score all sorts of risks using their own data on how to price what they would pay for a policy.

Go to page 12 of the November IR deck: 78,000 policies and underwrote 5,000 policies.

Market Tailwinds Secondary Market — \$255 Billion1 ☐ The senior population is growing rapidly, creating long-term demand for retirement solutions ☐ Only ~2% of the market opportunity (~\$4–\$5B) enters the life settlement market annually ☐ Significant awareness gap: 90% of seniors and 50% of financial advisors are unaware of the option to sell life insurance policies

2) currently its really a \$4-5 billion market...that has a lot of hurdles/learning curves to be successful at. It is certainly more will try to enter the market...but Abacus would probably be easier to buy than build given what they have.

Company Delivers Another Record Quarter, Beating Average Consensus by 20% ~

~ Marks 11 Consecutive Quarters of Strong Earnings Growth ~

~ Fourth Quarter and Full Year 2025 Revenue Up Over 100% Year-Over-Year ~

~ Full Year 2025 GAAP Net Income of \$36.5 Million; Adjusted Net Income of \$85.7 Million ~

~ Initiates Full Year 2026 Outlook for Adjusted Net Income to Between \$96 and \$104 Million ~

~ Outlines Long-Term Strategic Growth Targets ~

ORLANDO, Fla., March 12, 2026 (GLOBE NEWSWIRE) – Abacus Global Management, Inc. ("Abacus" or the "Company") (NYSE: ABX), a leader in the alternative asset management industry, today reported results for the fourth quarter and full year ended December 31, 2025.

Jay Jackson, Chief Executive Officer of Abacus commented, "We closed the year by delivering another strong quarter, achieving eleven consecutive quarters beating consensus. Quarter after quarter, we hit our guidance, exceeded expectations, expanded margins, and grew our asset base to approximately \$3.6 billion—all while executing disciplined capital allocation with ROE and ROIC above 20%. Real results consistently delivered, not aspirations. This track record should give shareholders confidence as we lay out our 5-year path to becoming a mid-cap company operating at approximately \$450 million in Adjusted EBITDA at scale, with recurring revenue representing 70% of our total revenue mix."

Fourth Quarter 2025 Highlights

- Total revenue for the fourth quarter grew 116% to \$71.9 million, compared to \$33.2 million in the prior-year period. The increase was driven by a \$32.9 million increase in Life Solutions revenue, a \$5.6 million increase in Asset Management revenue, and a \$235 thousand increase in Technology Services revenue.
- Origination capital deployment continued to expand, increasing by 82% for the quarter to \$230.7 million, compared to \$126.5 million in the prior-year period.
- GAAP net income attributable to shareholders was \$7.2 million, compared to GAAP net loss of \$18.3 million in the prior-year period. The increase was primarily driven by an increase in

Life Solutions and Asset Management revenue and a decrease in operating expenses, partially offset by an increase in interest expenses and depreciation and amortization expenses.

- Adjusted net income (a non-GAAP financial measure) increased 71% year-over-year to \$23.0 million compared to \$13.4 million in the prior year period. Adjusted diluted earnings per share for the fourth quarter of 2025 was \$0.23, compared to \$0.16 in the prior-year period.
- Adjusted EBITDA (a non-GAAP financial measure) for the fourth quarter of 2025 increased 132% to \$38.6 million, compared to \$16.6 million in the prior-year period. Adjusted EBITDA margin (a non-GAAP financial measure) for the fourth quarter of 2025 was 54%, compared to 50.0% in the prior-year period.
- Annualized return on invested capital (ROIC) (a non-GAAP financial measure) for the fourth quarter of 2025 was 21%, compared to 11% in the prior year period.
- Annualized Return on equity (ROE) (a non-GAAP financial measure) for the fourth quarter of 2025 was 22%, compared to 13% in the prior year period.
- Annualized Turnover Ratio (a non-GAAP financial measure) for the fourth quarter of 2025 was 2.6x, driven by meaningful capital inflows into our longevity-based funds and execution of our first securitization, exceeding the long-term target of 1.5x to 2.0x. This compares to the 2.0x Turnover Ratio reported in the third quarter of 2025.
- Average Realized Gain (a non-GAAP financial measure) for the fourth quarter of 2025 was 27%. This compares to 37% in the third quarter of 2025.
- Completed a strategic acquisition of AccuQuote that broadens Abacus' financial services capabilities and strengthens its ability to deliver integrated protection, wealth accumulation, and preservation solutions across the client lifecycle.
- Enhanced shareholder returns through the approval of an inaugural annual cash dividend of \$0.20 per share and authorization of a \$20 million share repurchase program, reflecting confidence in Abacus' long-term business model, recurring earnings, and capital strength.
- Completed the transfer of its Class A common stock listing to the New York Stock Exchange ("NYSE"), with shares now trading under the ticker symbol "ABX," enhancing Abacus' visibility among institutional investors and supporting long-term shareholder value creation.

Full Year 2025 Highlights

- Full year 2025 total revenues grew 110% to \$235.2 million, compared to \$111.9 million in the prior year, primarily driven by a \$30.2 million increase in Asset Management revenue, \$92.4 million increase in Life Solutions revenue, as well as a \$684 thousand increase in Technology Services revenue.
- Originations capital deployment for the full year 2025 was \$580.8 million, an increase of 53% from the prior year; number of policy originations grew 26% to 1,310, compared to 1,034 in the prior year.
- GAAP net income attributable to shareholders for the full year 2025 was \$36.5 million, compared to net GAAP loss of \$23.9 million in the prior year.
- Adjusted net income (a non-GAAP financial measure) for the full year 2025 increased 84% to \$85.7 million, compared to \$46.5 million in the prior year. Adjusted diluted earnings per share for the full year 2025 was \$0.86, compared to \$0.66 in the prior-year period.
- Adjusted EBITDA for the full year 2025 grew 115% to \$132.6 million, compared to \$61.6 million in the prior year. Adjusted EBITDA margin (a non-GAAP measure) for the full year 2025 was 56.0%, compared to 55.0% in the prior year.
- Return on invested capital (ROIC) (a non-GAAP measure defined below) for the full year 2025 was 20%, compared to 15% for the full year 2024.
- Return on equity (ROE) (a non-GAAP measure defined below) for the full year 2025 was 20%, compared to 17% for the full year 2024.

Liquidity and Capital

As of December 31, 2025, the Company had cash and cash equivalents of \$38.1 million, balance sheet policy assets of \$469.8 million and total outstanding debt, net of deferred discount and debt financing costs, of \$405.8 million.

Outlook

The Company is initiating its full year 2026 outlook for Adjusted net income to between \$96 million and \$104 million. The range implies growth of up to 22% compared to full year 2025 Adjusted net income of \$85.7 million.

In addition, the Q4 & FY 2025 Earnings Presentation, accessible on the Financial Results section of the website, outlines the Company's long-term strategic growth targets.

For a definition of Adjusted net income, see "Non-GAAP Financial Information" below.

Subject	ABX goals \$133 million to \$450 million in EBITDA by 2030
Entry	03/16/2026 11:30 AM
Member	zach721

The IR deck is worth taking a look. Goal is to grow from \$1.30 in EBITDA to \$4.50 per share by 2030 while achieving a higher multiple by moving to high margin recurring revenue streams.

Abacus New Offering: LifeARC & why the CEO thinks the stock could be 100 bagger
06/10/2026 10:37 AM
zach721
Okay...triple eye roll on 100 bagger comment at end of PR.... but the platform seems interesting. The ABX investor day will be in NYC on July 16th.

Abacus Global Management Announces LifeARC™, a Proprietary AI Platform and the Intelligence Layer for Lifespan-Linked Finance

~Unlocking Access to the \$120 Trillion Generational Wealth Transfer~

Abacus Global Management, Inc. (NYSE: ABX), a leader in the alternative asset management industry, today published a letter from the Company's Chairman and Chief Executive Officer, Jay Jackson, announcing **LifeARC™, the Company's proprietary AI-powered lifespan modeling platform, and issuing a strategic update on its Wealth Advisors division and the recently closed investment in Manning & Napier.**

To Our Investors,

Let me tell you about two of my neighbors.

Same street. Same age. Both retired last year, both with roughly the same amount saved. Both walked into their advisor's office and walked out with essentially the same plan.

One of them is healthy. Never smoked, exercises, parents both lived into their nineties. He's probably got 30 years of retirement ahead of him, maybe more. The other one has been managing a serious chronic condition for the better part of the decade. His LifeARC™ looks very different.

Neither of them knows that. Their advisor doesn't know that. The plan doesn't account for it. That's not a personal failing. It's a data problem. And until now, nobody had the data to fix it.

What We Built

Abacus Global Management is not an asset management and wealth advisory firm that built some technology on the side. We are a data and technology platform. That distinction matters more than almost anything else I'll say in this letter.

The common mistake is to define a company by the most visible transaction it facilitates. Amazon was not simply a warehouse operator because it moved products through fulfillment centers. Uber was not simply a taxi company because it connected riders with cars. In both cases, the real value was the infrastructure underneath: the data, technology, pricing systems, distribution, network effects, and market liquidity that made an entire category more scalable. That is how we think about Abacus.

We built Abacus Intel. We built LifeARC™. The plan was always to become the intelligence layer that the financial industry runs on rather than just another firm managing money inside it.

LifeARC™ harnesses AI to do something no competitor can match: it's powered by 20 years of Abacus proprietary data that can't be bought, built, or displaced. LifeARC™ takes an individual's medical history, conditions, medications, genetics, and biometrics and builds a personalized lifespan model. Not a population average. Not an actuarial table. Your own LifeARC™. Continuously updated as your health picture changes.

That model then drives everything downstream. How long does your portfolio need to last? When should you start drawing down? How much do you need in reserve for late-life care? What does your legacy plan look like if you live to 97 versus 78?

These aren't rhetorical questions. They're the questions that determine whether someone runs out of money in retirement or leaves more behind than they expected. And right now, the entire industry is guessing at the answers. Abacus is not guessing anymore.

Why This Moment Matters

There's a \$120 trillion wealth transfer happening right now. Baby Boomers passing assets to their children and grandchildren over the next three decades. It's the largest movement of money in the history of civilization, and it has already started.

Every single dollar in that transfer carries the same unanswered question at its center: how long does the person holding it actually have? That question shapes every estate plan, every withdrawal strategy, every conversation about legacy.

Abacus can answer that question with real individual data, not averages or outdated assumptions. Abacus is going to sit at the center of the most important financial event of our lifetime.

Earlier this year we were on a panel at the Milken Institute alongside J.P. Morgan and HSBC, talking about the \$120 trillion wealth transfer that is changing how we engage with our future clients. I was struck by the fact that the two largest financial institutions in the world were sitting on the same stage, talking about the same problem Abacus has spent years building a solution for.

They're having a conversation. While we built the answer.

Manning & Napier: LifeARC™ in the Real World

We want people to know why we put over \$50 million into a wealth management firm.

We invested over \$50 million into Manning & Napier, an \$18 billion financial advisory firm. This wasn't just about the return on that capital. It was about providing their over 3,400 clients access to LifeARC™'s lifespan modeling, improving outcomes for people who need it.

You can build the best lifespan modeling platform in the world, but if it's sitting on a server somewhere and not connected to real client portfolios, it doesn't improve anyone's retirement. We needed a partner who already had client relationships, client trust, and the infrastructure. Manning & Napier gave us that. And what we gave them was something none of their competitors have: a way to tell each client not just "how much you'll have," but "how long it needs to last."

This partnership is the first one and it won't be the last. Every major private wealth firm in this country has the same problem and none of them have built what we've built. The conversations are already happening.

Why I Believe This Is a 100-Bagger

I don't throw that term around. But I want to walk through why I believe it.

The market is \$120 trillion and it's moving right now. The technology moat is real—every LifeARC™ profile we build makes our model more accurate, and nobody can replicate that dataset from scratch. The timing is better than we could have planned for. And we have no direct competitor.

We're not disrupting the category. We are creating a category that did not exist—as Amazon was not building a simple retailer, but the company that built the infrastructure for digital commerce. Abacus is building the intelligence layer for lifespan-linked finance: the data, technology, modeling, and distribution platform that allows the financial industry to move from population averages to individualized lifespan-based planning.

The revenue model compounds with data licensing to institutions, LifeARC™ advisory and planning fees, increased direct AUM and insurance and annuity integration. Each layer runs on the same proprietary foundation we've already built. That is what makes the model powerful: the same intelligence layer can support institutional licensing, consumer planning, asset management, insurance distribution, and retirement-income solutions. The hard part is behind us.

The firms that build the intelligence layer beneath the \$120 trillion transfer will own wealth management for a generation. They will not just participate in the market; they will define how the market operates. I believe Abacus is that firm.

"The question has never been 'how much will you have?' It's always been 'how long does it need to last?' We're the first people in history who can actually answer that. For everyone. With their own data."

We built the technology. Abacus Intel runs the engine. LifeARC™ will be in real client portfolios. J.P. Morgan and HSBC are talking about addressing the same wealth transfer problem at the Milken Institute and there's \$120 trillion in motion that needs what we've built.

A lifespan is not a straight line. It never was. It's an arc of probabilities shaped by your health, your history, your decisions. The financial industry has been acting like everyone's arc is the same. We're the first firm to acknowledge that it's not, and to do something about it.

A lifespan is not a straight line—it is an ARC of probabilities.

With gratitude,

Jay Jackson

Chairman and Chief Executive Officer
