

Citi Global Technology Conference

Jeff Owens

Chief Technology Officer and Executive Vice President

DELPHI

Innovation for the Real World

Accelerating macro trends create new challenges

Regulated Active Safety growing with increased consumer awareness

More safe

Best-value electrification required to meet step function change in regulation

More green

IoT driving connected car to new levels & creating new challenges

More connected

Connectivity

- Validating 5.9GHz standard for Dedicated Short-Range Radio Communication (DSRC)

Cybersecurity

- Auto Information Sharing and Analysis Center (ISAC) developing process to share & fix vulnerabilities

Big Data

- OEMs enabled to collect but not personalize information

Safe, green and connected convergence creates market opportunities

Complete system technology integrator

Macro trends are creating OEM challenges and consumer demand

Flexible system designs

Best-value innovations

Vehicle integration expertise

Agile software solutions

**Solving
customer
problems**

Intelligent Driving

Delphi responding to opportunities with end-to-end solutions

DELPHI

Automated Mobility on Demand (AMoD)

Key accelerators driving early adoption of commercial Automated Mobility solutions

Market driver

- Motivated by economics rather than safety or convenience

Governance

- Simplified regulatory and legal environment at the local level vs. federal/state

Mobility profile

- Limited use cases in commercial applications in contrast with the consumer market

AMoD creates opportunities for a more connected car

Delphi and Mobileye automated driving equation

Mobileye

EyeQ® 4/5 System on a Chip (SOC)

Road Experience Management (REM™) mapping system

Policy and Reinforcement Learning system

Delphi

Automated Driving software algorithms from Ottomatika

Multi-Domain Controller

Forward-looking and full-surround Radar and LiDAR sensors

Central Sensing Localization and Planning (CSLP) Platform

Unmatched, most cost-effective Automated Driving solution

Production Ready for 2019

Offering a turn-key fully autonomous driving system to OEMs by 2019

Delphi and Mobileye autonomous solution in action

Innovation creates value through combined best-in-class technologies

Singapore AMoD project

- Developing an automated mobility on-demand pilot for the government of Singapore
 - First provider of the design, development, test and verification; fleet of six fully autonomous vehicles
- Our end-to-end ecosystem enables a secure, cloud-based, on-demand platform
 - Leveraging Delphi's proven automated driving platform, vehicle sensor suite and mobility cloud services
- Speeding innovation and commercialization for existing and potential new customers
 - In discussions with other cities around the globe
 - New business opportunities in mobility and connectivity, logistics, agriculture and mining

The world's first end-to-end on-demand mobility project

Delphi technologies enable safer vehicles

Increased safety awareness drives market growth

Product portfolio

Integrated technology advances Active Safety value proposition

Active safety as the foundation of automated driving

Level 0 No automation	Level 1 Function-specific automation	Level 2 Combined function automation	Level 3 Limited self-driving automation	Level 4/5 Full self-driving automation
Driver is in complete control of vehicle	Automation of one or more control functions	Automation of two or more control functions	Driver able to cede full control of all safety-critical functions under certain conditions	Driver able to cede full control of all safety-critical functions for an entire trip
				

Level 2 automation delivers 80% of the safety benefit for 20% of the cost

Increasing content per vehicle – Automated Driving

System provider of choice solving customer challenges

2016

14 major global technology centers
20,000 scientists, engineers & technicians worldwide, supporting ~1,300 product launches

Mature global resource developing and integrating innovative solutions

- Well positioned in automotive space to incorporate latest tech gadgets
- Engineering development centers strategically located in technology basins
- Expanding software & system capability with 1 in 4 engineers in this competency
- Track record of fast to market and flawless execution

Strategic partnerships complement portfolio

DELPHI

Key takeaways

AMoD is accelerating the development of automated driving technology

- Financially attractive to “get the driver” out of the vehicle
- Addresses current capacity constraint issue for mobility on demand providers (e.g. Uber, Lyft, ...)
- AMoD first applications in urban areas where the environment and use cases can be controlled

Active Safety serves as the foundation for automated driving

- Key ADAS sensing technologies (vision, radar, lidar) are required for automated driving level 3+
- Delphi's Multi-Domain Controller is leading the industry trend towards centralized computing
- Each subsequent ADAS generation will have increasing levels of autonomy

Many opportunities to engage in automated driving advancement

- Singapore mobility pilot initiates in mid-2016 offering unique opportunity for Delphi
- Many OEMs entering the space; Delphi engaging in their development
- MBLY + DLPH CLSP demonstration at CES 2017

Delphi is well-aligned with technology trends for sustainable future growth

Making it possible.
