

BARRICK

Tax Contribution Report 2023

2023 HIGHLIGHTS

\$2.6bn

Total tax contributions and royalties paid by Barrick Gold Corporation and its subsidiaries (the “Group”) in 2023^(a) (2022: \$2.43bn)

\$218m

Amount of dividends to the state (where applicable) paid by the Group in 2023 (2022: \$218m)

54,399

Workforce as at December 31, 2023^(b) (2022: 54,807)

\$11.9bn

Economic contributions made to host countries in 2023^(c) (2022: \$10.7bn)

Notes to readers

In this Tax Contribution Report:

All dollar amounts are expressed in US dollars unless otherwise indicated.

Only operations where Barrick is a sole or majority owner and joint ventures where Barrick acts as the operator are included in this report.

A glossary of certain key terms is included at the end of this report.

All of the above numbers include only those of Barrick's operating entities as well as our corporate office in Canada. Other administrative offices are excluded.

A Tier One Gold Asset is an asset with a \$1,300/oz reserve with potential for 5 million ounces to support a minimum 10-year life, annual production of at least 500,000 ounces of gold, and with all-in sustaining costs per ounce life-of-mine that are in the lower half of the industry cost curve. A Tier One Copper Asset is an asset with a \$3.00/lb reserve with potential for 5 million tonnes or more of contained copper to support a minimum 20-year life, annual production of at least 200,000 tonnes, and with all-in sustaining costs per pound life-of-mine in the lower half of the industry cost curve. Tier One assets must be located in a world class geological district with potential for organic reserve growth and long-term geological drive value addition.

(a) Total tax contributions and royalties paid are taxes and royalties as a result of the company's business activities in a particular country. Included in this number are also those taxes collected by the company on behalf of others. All taxes, royalties and costs reported in this document for joint ventures managed by Barrick are reported on a 100% basis.

(b) Unless otherwise specifically stated, the workforce number includes individuals who are directly employed by Barrick (or a joint venture managed by Barrick), and the employees of contractors and seasonal workers. Any number of employees referenced in this report includes only those individuals who are directly employed by Barrick (or a joint venture managed by Barrick).

(c) Economic contributions include total tax contributions borne and collected by Barrick, royalties, dividends to the state (or state-owned entities), community development investments, payments to employees and in-country procurement and services.

MESSAGE FROM THE PRESIDENT AND CEO

Barrick's Tax Report for 2023 joins our Annual and Sustainability Reports in providing shareholders and other stakeholders with a comprehensive insight into the company's performance, policies and practices. In line with our commitment to transparency, it goes well beyond regulatory and governance disclosure requirements.

Barrick operates across four continents in 18 countries, most of which are still developing in socio-economic terms. Our total economic contribution to these countries last year increased by 11% to \$11.9 billion. The taxes paid by our global operations rose by 5% to \$2.55 billion.

Following the reconstitution of the Reko Diq copper-gold project in the Balochistan province of Pakistan in early 2023, Barrick last year paid the provincial government \$5 million as an advance on the royalties it will earn when the mine is in production. A further \$3 million was invested in the development of healthcare, education and the availability of potable water.

Kibali opened up a new economic frontier in a remote part of the Democratic Republic of Congo and promoted the development of a thriving commercial hub by paying almost \$2.7 billion to local suppliers and contracts over the past 13 years, in addition to its \$1.5 billion contribution to the government in the form of taxes and royalties. In Tanzania, our Twiga joint venture with the

government is the largest dividend payer among all the entities in which the state has an equity interest. Across our group there are many similar instances of Barrick's importance as a creator of value which it shares equitably with its hosts, recognizing that taxes are only one component of economic contribution.

Likewise, Pueblo Viejo in the Dominican Republic has paid direct and indirect taxes of more than \$3.3 billion since 2013, averaging 15% of the total income tax paid by corporations in that country. With the completion of its expansion project which will extend its mine life beyond 2040, its total tax contribution is expected to exceed \$9 billion.

It's not only in developing countries that our operations generate significant taxes. In addition to federal corporate income taxes, county taxes and state taxes, Nevada Gold Mines pays two industry-specific taxes: the net proceeds of minerals tax and the gold and silver tax for education. In 2023, it paid nearly \$1 billion in taxes.

In keeping with our partnership model, we continue to work with our host governments to develop fiscal and regulatory regimes that are investor-friendly.

Mark Bristow
President and CEO

ABOUT THIS REPORT

TRANSPARENCY AND DISCLOSURE

The taxes, royalties and dividends we pay to the state are significant sources of funding for our host countries and assist in providing vital services and infrastructure.

Therefore, we recognise the importance of transparency and openness on these matters. We believe that, by disclosing information about our economic, environmental, social and governance performance, we not only support our company's growth but also assist the sustainable development of the mining industry and society.

We have a long-standing practice of sharing information about our tax and other fiscal contributions, as well as our company's approach to tax matters. This information is publicly available and includes the following:

- Our [report](#) filed annually with the Canadian authorities in accordance with the Extractive Sector Transparency Measures Act ("ESTMA"), which was introduced in 2015 to increase transparency and curtail corruption in the extractive sector. The report includes information on taxes, dividends, royalties and fees paid on a country-by-country, as well as on a project-level basis.
- Our [tax policy document](#) published on our corporate website in accordance with guidance published by tax authorities. This document covers tax governance and risk management, tax planning and intra-group transactions, tax compliance and relationships with tax authorities, and tax disclosures and transparency, as well as engagement with governments on their tax policies.

We actively participate in various tax studies conducted by industry associations and support voluntary disclosure initiatives. Barrick was the first Canadian mining company to be a signatory to the Extractive Industries Transparency Initiative ("EITI"), a non-profit association which advocates for openness and accountability in the oil, gas and mineral resources sectors. By joining the EITI, the governments of countries are required to disclose their revenues from the extractive industry and their

allocation of contracts and licenses, and companies are required to disclose their payments to these governments related to each stage of extractive activities. Furthermore, the EITI undertakes an independent reconciliation of the data received from the companies and governments and, in case of inaccuracy, the EITI helps to build a constructive dialogue between companies and states to understand and resolve such differences.

Barrick has gold and copper mining operations and advanced projects in 18 countries. All of these countries, other than the United States, Canada, Saudi Arabia, Chile, Pakistan, Egypt and Japan are members of the EITI. In accordance with EITI standards, all information about our payments to governments are disclosed to the EITI, reconciled with the state revenue information on a regular basis and then published in EITI reports.

Responsible mining has a crucial role to play in the achievement of the UN Sustainable Development Goals ("SDGs") and, thus, we encourage collaboration across our industry. Sustainability is embedded in our Board governance structure; our ESG & Nominating Committee is responsible for overseeing Barrick's environmental, safety and health, community engagement, development and investment, and human rights programs, policies and performance. Moreover, 30% of incentive payments for senior leaders under Barrick's Partnership Plan are now tied to sustainability performance, including a new 10% weighting under the annual incentive program linked to our annual safety and environment performance and a 20% weighting under our Long-Term Company Scorecard linked to the assessment of our industry-first Sustainability Scorecard. Sustainability performance is also assessed as part of annual performance incentive compensation for these senior leaders. For the rest of the organization, sustainability performance accounts for 25% of short-term incentive scorecards for leaders in our operations.

Barrick has been a proud signatory to the United Nations Global Compact since 2005 and we are steadfastly committed to the 10 principles that the Global Compact articulates. The principles focus on human rights, labour, environment and anti-corruption, and are integrated into our strategies, policies and procedures.

ABOUT THIS REPORT continued

Barrick is an active member of the International Council on Mining and Metals (the “ICMM”), an international organisation dedicated to the sustainable development of the mining and metals industry. The ICMM views taxes as a sustainability issue that has a great impact on a state’s development capacity. Barrick contributes actively to the ICMM’s working groups on sustainability and taxation.

Additionally, Barrick is part of the globally recognised sustainability program – the Towards Sustainable Mining (“TSM”) program. The TSM supports mining companies in managing key environmental and social risks. It was the first responsible mining standard in the world to require site-level assessment with external verification. The TSM standard has been adopted by a number of countries, including two countries where we operate — Argentina and Canada. Each year Barrick assesses its operations in these countries against the performance indicators outlined in the TSM Protocols and these reports are publicly available.

Barrick is also a member of the World Gold Council (the “WGC”). The WGC developed the Responsible Gold Mining Principles (“RGMPs”) which are endorsed and implemented by Barrick at all its gold operations. The RGMPs provide a framework of 10 key principles (covering governance, social and environmental matters) that aims to unite the gold mining sector behind common standards on sustainability performance. Barrick has implemented both the ICMM Performance Expectations, and the WGC RGMPs, collectively referred to by Barrick as the RGMPs+. Barrick’s progress against the RGMPs+ is assessed annually and is independently assured. The independent assurance statements for 2021, 2022 and 2023 are publicly available on our website.

In 2023, the WGC released a documentary film with renowned actor Idris Elba about the historical and contemporary importance of gold in the world. The film was produced by the

WGC to educate the public about the importance and impact of gold on individuals, communities and the economy. The film demonstrates the evolution of the mining industry towards improved working conditions and sustainable mining principles. The documentary showcases the biggest gold mine in Africa—Kibali mine in the Democratic Republic of Congo (“DRC”)—operated by Barrick. The film documents the difficulties to operate a large scale mine in a remote area, disconnected from the national power grid, and demonstrates Kibali’s solutions including the construction and operation of three hydropower stations, which provide renewable energy, meeting over 80% of the electricity demand of the mine as well as power to the local community. These stations not only benefit the mine, but are also massive economic drivers for the surrounding areas in which they are located. Thanks to all the improvements made by Barrick in the region, the population around Kibali has risen sharply from 50,000 to 500,000. As highlighted by Idris Elba, even after the mine’s closure, the legacy of hydropower stations and Barrick’s contribution to sustainable community development will endure in this part of the country for many years.

At Barrick, we engage with a broad range of stakeholders, including financial institutions, NGOs and the governments of our host countries to discuss any concerns with respect to our approach to social, environmental and tax matters. We actively encourage discussions around those important issues and always welcome feedback.

Just as Barrick’s 2023 Sustainability Report is prepared in line with the Global Reporting (“GRI”) standards, our current Tax Contribution Report is also aligned with the disclosure requirements of GRI 207-1 to 207-3 that focus on the management approach to tax matters. We also disclose certain information in accordance with the GRI 207-4 requirement. Please refer to Appendix 1 for more details.

TAX CONTRIBUTION THROUGH THE LIFE CYCLE OF A MINE

The mining sector is unique and distinct from other industries. The discovery process is often long and uncertain.

When economically viable mineral deposits are discovered, the extraction of such material often requires large upfront capital investments. Typically, mining ventures only provide positive cash returns after substantial periods of production. Consequently, we are a long-term partner to governments and the host communities in which we operate, and currently most of our mines have business plans of at least 10 years, firmly anchored in demonstrable geological understanding, engineering and commercial feasibility.

Throughout the life cycle of a mine, we continuously engage with government authorities, share our expertise in the industry, work towards improving the host country's attractiveness for investment and strive to be a trusted partner. Given the nature of our business, our contributions are not limited to taxes. We make significant contributions to the development of our host countries' entire economies and broader society. We have a global workforce of approximately 54,000 and always endeavour to work with and empower local suppliers. We have spent nearly \$7 billion with host country suppliers during 2023.

Our fiscal contributions vary depending on the particular phase in the mining cycle. Mining and exploration activities are mostly conducted under licencing or concession agreements concluded between the state and an investor. Under such agreements, the investor receives the right to search for, prospect, and extract minerals in a pre-agreed area and to conduct related work. For illustrative purposes, this year we have included information on our Kibali mine in the DRC to explain how the mining business works and how it is taxed through the different stages of the life cycle of a mine.

Generally, mining and exploration activities consist of four phases:

1. Exploration and discovery
2. Construction of the mine and related infrastructure
3. Mining and processing of ore
4. Decommissioning and closure

1 Exploration and discovery

Exploration and discovery is the first phase in a mining project, and it includes geological, geophysical and geochemical activities aimed at determining the possible presence and quality of minerals present in the geology or bedrock of the area.

In those instances where a discovery is made, it is normally followed by a study on the economic feasibility of a potential mining project. Such a study also includes an analysis of social and environmental baselines and a determination of the resultant impact of the project; this normally requires the approval of the environmental regulators of the host country.

As no revenue or profits are generated during this phase, fiscal contributions to the state are normally not substantial and are generally limited to license payments, employment-related taxes for the geological teams and minor payments to governments.

3 Mining and processing of ore

Mining is conducted through either surface or underground mining activities. The use of either method will depend on the nature of the ore body. The duration of the mining and processing phase depends on the size of the ore body and constraints associated with the mining of such ore body or processing the ore. This phase has the most sustained and long-term opportunities for local employment, procurement of goods and services and community investment.

The most significant portion of the fiscal contributions made by mining companies to the state come in the form of corporate taxes, royalties and dividends. Other contributions to government include employment taxes, indirect taxes, customs duties and permit fees. A mining company also transfers to the government the taxes that it collects on behalf of other parties, such as employee income taxes, employee social security contributions, as well as withholding taxes on interest, dividends, and payments to third-party service providers.

Commercial production at the Kibali mine began towards the end of 2013. Our total economic contributions in the form of taxes and royalties, salaries and payments to local suppliers have amounted to almost \$5 billion over the last thirteen years.

2 Construction of the mine and related infrastructure

In circumstances where a positive investment decision is made, the construction of the mine can proceed. In most instances construction is not limited to the mine and processing facilities, but also includes the surrounding infrastructure such as roads, bridges, power generation facilities, water treatment facilities, sanitary sewage facilities, housing for employees, as well as medical and education facilities.

In general, the initial phase of a mining project from exploration and construction of infrastructure to the start of production can take between 10 and 15 years, and sometimes longer. Given that there is no profit-generating activity during this phase, fiscal contributions to the government remain relatively low, though they are much higher than during the exploration phase. The contributions are generally limited to customs duties, indirect taxes and employment-related taxes. The biggest contribution in this phase is employment and the utilisation of local contractors, which are generally higher than when the mine is in operation.

To illustrate, this initial construction phase at our Kibali mine lasted for approximately four years, during which time our total tax contributions amounted to \$67 million of customs duties, employment-related taxes and indirect taxes. Our initial investments during the construction phase were approximately \$1.6 billion.

4 Decommissioning and closure

Legislation in most countries requires mining companies to rehabilitate impacted areas to an agreed-upon land use standard and ensure that the mine is closed in a safe and stable manner. Among other things, mining companies are required to implement measures to prevent pollution of groundwater and soil around the mining area. Responsible plant closures and land reclamation plans are factored into the initial planning and design phase of mining operations. At Barrick, responsible closure is an important part of our sustainability commitment.

This final stage does not give rise to significant tax contributions, as the operations typically do not generate any profits during this stage. Companies work with local suppliers to restore the mining areas and to responsibly close the mines. Once the land is restored, other economic activities are supported and encouraged.

The Kibali mine is expected to be active and to continue contributing to the national and local economy beyond 2037. In preparation for the future, we make the required provisions to cover the costs of decommissioning. Based on our previous experience, the decommissioning and closure of a mine usually takes several years.

THE ROLE OF MINING IN THE ECONOMY

The Paris Agreement, adopted at the UN Climate Change Conference in 2015, sets a long-term objective to keep global warming below 2°C, preferably at 1.5°C. This ambitious target requires a significant shift to clean energy technologies, especially to solar panels, wind turbines, and battery storage systems, that are more mineral-intensive compared to traditional fossil-fuel-based power generation.

The Minerals for Climate Action report⁽¹⁾ highlights that, by 2050, the production of minerals like graphite, lithium, and cobalt must increase by 500% to meet this growing demand. Copper stands out for its critical role due to its high conductivity, being integral to all low-carbon technologies with a predominant use in solar, wind energy and power transmission systems. Despite advances in technology and increased recycling, the demand for copper is expected to remain high, growing in tandem with the increase in green energy production.

While gold's role in green energy may not be as prominent, its applications in various other sectors like medicine, electronics, and aerospace are extensive. For instance, in the medical field, gold compounds are employed in treating diseases such as cancer and arthritis. They are also used in implants, prosthetics, and dentistry. Gold is integral to the development of diagnostic tools and medical tests, including tests for pregnancy, HIV, and COVID-19. Moreover, it is a key component in medical devices such as stents and pacemakers. In the realm of electronics, gold is indispensable, found in connectors, switches, relay contacts, soldered joints, wiring, and connection strips. Given these diverse and critical applications, the future demand for gold is expected to continually increase.

The mining industry has a crucial role to play in achieving the objectives of the UN SDGs, such as no poverty, zero hunger, good health and well-being, quality education, and decent

work and economic growth, among others. Mining companies often operate in rural locations where they are pivotal to local socio-economic development. We believe that uplifting these communities is foundational to achieving the SDGs. For more detailed information regarding our contribution to socio-economic goals, please refer to our Sustainability Reports.

Further, according to the World Bank⁽²⁾, an estimated investment of around \$1.7 trillion is required in the mining sector over the coming 15 years to meet the growing demand for minerals. This investment is critical, considering minerals are crucial to the economies of 81 countries, with those economies representing a quarter of global GDP, half of the world's population, and nearly 70% of individuals living in extreme poverty⁽³⁾. The IndustriALL Global Union⁽⁴⁾ estimates that the mining industry globally employs an estimated 3.7 million people, with around 1.5 million of these individuals working in developed countries, and approximately 2.2 million employed in developing countries. The \$1.7 trillion of investment noted above has the potential to boost local economies, create jobs, and stimulate infrastructure development. We have already witnessed life-changing impacts in many countries where we operate, with Zambia being a notable example.

Zambia is among the world's leading copper producers, and copper mining significantly impacts the country's economy as one of the primary sources of revenue and a key driver of economic development. In 2022, the contributions from the extractive industry to Zambia's GDP⁽⁵⁾ decreased from 12% to 9% due to operational challenges and the suspension of mining operations, which resulted from a series of historical changes in the tax legislation over a number of years. Further details of some of these changes were included in our 2021 Tax Contribution Report. In 2022, the mining industry accounted for 72% of Zambia's total export earnings and 44% of government revenues. The copper mining industry not only provides direct employment opportunities in mining operations but also creates numerous indirect jobs in supporting industries, such as transportation, equipment supply, and other service industries.

ROLE OF MINING continued

Barrick started its operations in Zambia in 2011, and the Lumwana mine now ranks as the third largest in the country. Located in a remote area near the border with the DRC, there was very little infrastructure prior to the development of the mine. A fully sustainable community, Lumwana Estate, has been constructed for the mine employees and their dependents, as well as associated contractors and suppliers required to work at the mine operations. Lumwana has been transformed from a purely rural village of 10,000 inhabitants to a town of over 40,000. Whilst Barrick has been present in the country, it has constructed 21 school classroom blocks for existing schools, 1 high school, 7 clinics, and a number of sports amenities. Additionally, the area was sadly known for having one of the highest incidences of HIV/AIDS in the world, but thanks to our collaboration with local NGOs over a number of years, the HIV positivity rate has significantly decreased.

In 2022, Barrick implemented a United Nations REDD+ project at a cost of \$3 million, designed to reduce and prevent deforestation through conservation. We have partnered with three chiefdoms (Mumena, Mukumbi and Matebo) and the government (through the Forestry Department under the Ministry of Green Economy and Environment) to implement a REDD+ project covering a total area of 300,000 hectares benefiting a population of approximately 38,000.

This project aims to encourage the community to adopt alternative livelihoods, such as agriculture. For more detailed information regarding the REDD+ project, please refer to our Sustainability Reports. In over 12 years of our presence in the country we have purchased approximately \$4.9 billion in goods and services from Zambian registered businesses. Barrick is committed to local employment; currently 99.3% of Lumwana's employees and 98% of its contractors are Zambian nationals - both industry-leading statistics.

In 2023, we commenced a two-year pre-feasibility study to transform the Lumwana copper mine into one of the world's major copper mines, with projected annual production of around 240,000 tonnes over 30 years.⁽⁶⁾ The estimated cost of the expansion project is almost \$2 billion and pre-construction is scheduled to start in 2025.

With its substantial copper reserves, Zambia can play a crucial role in supplying this critical mineral to the world for the transition to green energy. The revenues generated by mining will provide the government with much-needed funds for public services and infrastructure development, which in turn can help spur economic growth and development for the long term.

The Hemlo mine, located just north of Lake Superior on the Trans-Canada highway, approximately 35 kilometres east of the town of Marathon, Ontario, is a significant gold-producing operation in Canada.

Having produced over 21 million ounces of gold, the Hemlo mine has been in continuous operation for more than 35 years and currently operates as an underground mine.

The Hemlo mine is situated on the traditional lands of indigenous communities and as such, we engage extensively with local groups, maintaining four significant partnerships with Indigenous Partners. In areas where our mining activities overlap with their lands, we proactively cease operations to ensure these lands are protected, respected and well conserved.

Due to enhancements in the underground efficiency at the mine, implemented last year, and the adoption of a new geological model, we have achieved a slight increase in production for 2023. Additionally, with new projects, the Hemlo mine will continue its substantial mining activities in Canada into the future. Our tax contributions include royalties and indirect taxes, both at a federal and provincial level. We also withhold and pay personal taxes and social contributions on behalf of our employees.

(2022: \$4.7bn)

Nevada Gold Mines (“NGM”), established in 2019 as a joint venture between Barrick (61.5%) and Newmont Corporation (38.5%), represents the largest gold-producing complex in the world with three Tier One gold mines — Cortez, Carlin and Turquoise Ridge — as well as other gold mines.

We also operate two power plants that provide electricity to our mines and provide electricity and electric stability to the regional electric grid when required. NGM is operated by Barrick.

The mining industry has been a cornerstone of Nevada’s economy since the state’s inception, playing a foundational role in its economic development. In 2022, the total economic output of Nevada’s mining industry was over \$12.7 billion and the industry employed approximately 36,000 people, with nearly 15,000 of those being direct jobs⁽¹⁾. Not only does the mining industry offer the state’s highest average salary, but it also provides access to various benefits, including health care, retirement, sick leave, and paid time off.⁽¹⁾

In addition to federal corporate income taxes, county taxes and Nevada state taxes, NGM pays two industry specific taxes, the net proceeds of minerals tax, and the gold and silver tax for education.⁽²⁾ Our tax contributions and royalties during 2023 amounted to \$997 million. NGM is one of the state’s largest employers and currently employs 7,159 people directly.

NGM accounts for approximately 40-50% of Barrick’s total gold production; similarly its greenhouse gas (“GHG”) emissions are a large majority of total company emissions. As such, we continue to work on reducing our GHG at NGM. In December 2022, in cooperation with three Nevada-based contractors we started the construction of a 200MW solar facility with a battery storage system at the TS Power Plant. During 2023, we obtained the necessary construction permits, awarded key contracts for construction materials and installation, and began the civil engineering and earthworks on site, including grading and exaction for the solar field and the substation’s foundations.

The solar project has a budget in excess of \$290 million and is financed entirely by NGM. As the U.S. government have introduced certain investment tax credits for the construction of solar energy projects, NGM are eligible for a potential 30% investment tax credit at the federal level and a 10% credit for placing the solar array in Eureka county. The total tax savings from these incentives attributed to Barrick in 2023 are approximately \$30 million. Additionally, we may be eligible for an extra 10% tax credit due to our use of local manufacturers, equipment, and materials. Although we are eligible for these tax credits, our decision to construct the solar facility in Nevada was driven by commercial and sustainability motives. In 2023, we successfully commissioned 50% of the solar field and connected it to the electrical grid. The remaining cells are scheduled to be commissioned over the course of 2024. The solar project is anticipated to meet 17% of NGM’s total electricity requirements.

In 2023, NGM also launched a new Wildlife Endowment as part of our non-profit Heritage Fund, in partnership with the Nevada Department of Wildlife, aimed at

UNITED STATES continued

supporting wildlife habitat enhancement and restoration in Nevada. The Wildlife Endowment has recently approved \$5 million of the \$20 million commitment by NGM to be earmarked for Wildlife Endowment funding. Starting in 2023, with quarterly contributions, the Endowment will be fully funded by mid-2025 and will accept funding requests from environmental organisations that meet specified criteria, guided by a subcommittee of external advisors.

In 2023, the US Bureau of Land Management approved NGM's plan for the new Goldrush underground mine at the Cortez Complex. The long-life mine is expected to start ramping up production in 2024 after the commissioning of the initial project infrastructure and is forecast to produce 130,000 ounces in 2024 and growing to approximately 400,000 ounces per annum by 2028.⁽¹⁾ NGM has invested over \$370 million in Goldrush, with total expenditure projected to be around \$1 billion for the planned production levels. The project, having undergone extensive environmental review and stakeholder consultations, will create approximately 500 construction jobs and 570 operational jobs. Goldrush is also expected to significantly contribute to Nevada's economy through taxes, including funds earmarked for education.

The Veladero mine is located in San Juan Province, Argentina, six kilometres east of the Chile and Argentina border. The mine is 4,000 to 4,850 meters above sea level and is located in a remote area with the closest major city being 375 kilometres from the mine.

The Veladero mine, operated by Barrick, is 50% owned by Shandong Gold Mining Co. Ltd. ("Shandong") and 50% by Barrick.

Due to its remote location far from major cities or communities, the Veladero mine had to depend on a high-cost diesel generation power plant on site until 2023. However, after completing the \$54 million Veladero Power Transmission project in 2022, entirely financed by Barrick and Shandong, going forward we will be able to reduce the mine's annual GHG emissions by approximately 10%.

In 2023, the Veladero mine achieved a significant milestone by becoming the first mine in the country to comply with the Toward Sustainable Mining Standard. The journey to TSM certification at Veladero reflects Barrick's deep commitment to sustainable mining practices, benefiting not only the company but also its employees, neighbouring communities, and future generations. This achievement is a result of interdisciplinary effort and collaboration with the Argentine Chamber of Mining Companies. The process includes an annual self-assessment, compliance action plans, external verifications, and hosting the Independent Interdisciplinary Advisory Panel of the TSM program at the mine.

Since 2005, Veladero mine has contributed approximately \$12.3 billion to the Argentinian economy through taxes, royalties, salaries and payments to local suppliers.

(2022: \$913m)

Pueblo Viejo is located in the Dominican Republic, approximately 100 kilometres northwest of the capital city of Santo Domingo and is a joint venture between Barrick (60%) and Newmont (40%). The mine is operated by Barrick.

Since 2013, Pueblo Viejo mine has been a major economic driver in the Dominican Republic and amounted to approximately 30% of national exports for the period from 2013 to 2023. Direct and indirect taxes paid for the same period amounted to more than \$3.3 billion, averaging 15% of the total income tax paid by corporations in the Dominican Republic.

After several years of comprehensive engineering, environmental and community engagement processes aligned with the Global Industry Standard on Tailings Management we achieved another milestone in the Dominican Republic by receiving an environmental license for a new tailings storage facility in 2023.

This multi-year process included the site selection process, followed by an Environmental and Social Impact Assessment ("EISA"). This involved the completion of numerous specialist studies undertaken by independent in-country and international experts, including an independent peer review. Over the last four years we also consulted with interested and affected parties, including more than 3,000 community engagements and two open public participation meetings. In line with our commitment to transparency and best practice, open public meetings were held for all parties to raise concerns, questions and comments throughout the process.

The expansion project will allow Pueblo Viejo to sustain gold production above 800,000 ounces annually and to extend the life of the mine beyond 2040.⁽¹⁾ This means that Pueblo Viejo will continue being a major creator of value for the Dominican Republic and its people far into the future. Along with Newmont, we have already spent more than \$1 billion on the Pueblo Viejo plant expansion, including a new crusher, Sag mill, carbon-in-leach circuit, a flotation circuit, and two new oxygen plants. The additional capital expenditure for the Pueblo Viejo expansion project will be approximately \$1 billion and will be financed entirely by Barrick and Newmont.

From the beginning of commercial production in 2013 through the extended life of mine beyond 2040, it is expected that total exports will exceed \$33 billion, and total direct and indirect taxes will be over \$9 billion.

(1) See the Technical Report on the Pueblo Viejo mine, Dominican Republic, dated March 17, 2023, and filed on SEDAR+ at www.sedarplus.ca and EDGAR at www.sec.gov on March 17, 2023.

The Porgera mine is an open pit and underground gold mine located in the Enga province of Papua New Guinea (“PNG”), around 600 kilometres north-west of the capital city, Port Moresby. The site is located at a high altitude in a remote and actively seismic zone.

After over three years of temporary care and maintenance, the Porgera mine was reopened in December 2023 and mining and processing recommenced in the first quarter of 2024. This development follows the fulfilment of the conditions laid out in the Porgera Project Commencement Agreement, including the establishment of a new ownership structure for the mine, the conclusion of the New Porgera Limited Shareholders Agreement, the issuance of a Special Mining Lease, accompanied by a new Mining Development Contract, and the conclusion of a new Fiscal Stability Agreement.

As the site was on temporary care and maintenance until December 2023, our tax contributions in 2023 were limited to \$72 million. We have paid \$54 million to the employees and we spent \$678 million on care and maintenance over more than three years the mine has been closed. Now that the mine has resumed operations, our tax contributions and royalties are expected to increase significantly.

The mine hosts an orebody with measured and indicated resources of 10 million ounces and inferred resources of 3.4 million ounces. After initial ramp up and optimisation of the Wangima pit, the mine is forecast to produce an average of 700,000 ounces per year, achieving a milestone towards its potential Tier One production profile — one the largest of its kind in the industry.

The new ownership of Porgera is shared 51% by PNG stakeholders, including local landowners and the Enga provincial government, and 49% by Porgera Jersey Limited, owned jointly by Barrick and Zijin of China. Barrick (Niugini) Limited, a joint venture between Barrick and Zijin, is responsible for operating the mine. Importantly, PNG shareholders will receive 53% of Porgera's overall economic benefits, expected to amount to more than \$7 billion over the mine's projected 20-year life, assuming a gold price of \$1,800 per ounce. In the future, Porgera has a great potential to become a major contributor to the country's economy.

THE SUCCESSFUL REOPENING OF THE PORGERA MINE

The Porgera mine, one of the largest gold mines in PNG and a major employer in the region, was closed in April 2020. This closure came after the PNG government decided not to renew the mine's special mining lease ("SML").

Barrick disagreed with this decision taken without due process. The decision to close the mine led to substantial negative economic and social impact in the area, including job losses and a decrease in local economic activity.

Barrick (Niugini) Limited originally applied for the extension of the special mining lease back in 2017 and had been engaging with the Government on this matter since then.

In 2021, after many months of negotiations that followed the Government decision not to renew the SML, the parties achieved a breakthrough, signing a binding framework agreement setting out a path to the reopening of the mine.

Under the new agreement, the ownership structure of the Porgera mine was revised, with the PNG Government and landowners having a greater share in the mine along with a larger share in revenue distributions. The agreement also included plans to address environmental concerns and invest in community development projects to benefit local residents. Furthermore, in 2022, the parties signed the Porgera Project Commencement Agreement, which in turn paved the way for the signing of a number of definitive agreements, including a new fiscal stability agreement signed in 2023 and more importantly, the issuance of a special mining lease also in 2023. Porgera mine was reopened in December 2023, and made its first gold pour since restarting in February 2024.

The case of the Porgera mine highlights the complexities of mining operations in remote areas and the importance of collaborative approaches involving all stakeholders, including governments, local businesses, and local communities, to address challenges and create sustainable and equitable outcomes. We are very proud to have restarted operations and are committed to playing a vital role in the future development of the region.

The Tongon gold mine is located 628 kilometers north of the Côte d'Ivoire port city of Abidjan, and 55 kilometers south of the border with Mali. The mine is located in one of the poorest parts of the country. Barrick has a 89.7% interest in the Tongon gold mine, and the remaining 10.3% shareholding is held by the State of Côte d'Ivoire and Ivorian investors.

Since the start of the mine we have spent more than \$16 million on community needs, including nearly \$4.5 million on roads and infrastructure, \$2.8 million on education and \$2 million on water facilities. In 2023, we allocated approximately \$330,000 to upgrade the Mbengue hospital, which involved building and equipping 5 dispensaries and 5 maternity units, rehabilitating 3 health centres, constructing 15 housing units for health staff and donating equipment and medicine. Furthermore, we continue to invest in our agribusiness project with investments to date nearing \$1.6 million, which includes the development of 18 hectares of rice farming for women henhouses, pigsties and market gardens. Going forward, we will continue to develop large-scale socio-economic projects in nearby communities, such as maize farming, fish farming, a soap project run entirely by women and a shea butter production facility.

Originally scheduled for closure in 2020, the life of Tongon gold mine continues to be extended through successful exploration campaigns. New exploration achievements, such as the Seydou North, Tongon West, and Djinni satellite targets, have further contributed to this extension. Additionally, we were awarded a new exploration permit for Boundiali and drilling is ongoing at the Fonondara conversion project.

Since Tongon poured its first gold in 2010, the mine has contributed over \$2.4 billion to the Ivorian economy in the form of taxes, royalties, dividends, salaries, payments to local suppliers and infrastructure development. Extending the life of mine will help ensure that the Tongon mine continues to share its value with all its Ivorian stakeholders, while maintaining investments in community infrastructure development and income-generating projects.

Africa's largest gold mine, the Kibali gold mine is located in the northeast of the DRC, approximately 150 kilometres west of the Ugandan border town of Arua.

The mine is a joint venture between Barrick (45%), AngloGold Ashanti (45%), and Société Minière de Kilo-Moto (10%), a state-owned entity. The mine is operated by Barrick.

In 2022, for the fourth consecutive year, exploration at Kibali has more than replaced the gold mined in that year, thereby extending the mine's Tier One production profile to 2037 and beyond and increasing reserves to a level equivalent to that in the original 2010 feasibility study. This is in spite of having produced over 6.4 million ounces of gold since its commissioning. We continue to explore for additional reserves to replace those depleted at Kibali and seek new growth opportunities elsewhere in the DRC.

We also continue to invest in recruiting and training Congolese nationals. In 2023, this led to appointment of Arthur Kabila as Kibali's first Congolese general manager. Additionally, Kibali maintains multiple partnerships with local businesses, many of whom receive active mentorship from Barrick. This includes the all-Congolese team responsible for constructing the mine's Azambi hydropower station.

Located in a very remote area, Kibali meets its energy needs through its three hydropower stations, and plans are well underway for a 16MW solar farm with an additional battery energy storage system to supplement the hydropower during the dry season. Upon the project's completion in 2025, the mine will run entirely on renewable electricity for half of the year, thereby further reducing Kibali's carbon footprint and operational costs.

Through our social development program Cahier des Charge, which aligns with the Mining Code, we launched eleven projects in 2023, with seven of them nearing completion. Barrick's investment in these programs will be approximately \$8.9 million over five years. Additionally, the mine's community development fund, which contributes 0.3% of revenue to projects, now funds 44 projects. In 2023, as part of our various community involvements, we renovated 76 km of agricultural road, built 4 new schools, 2 modern mortuaries, and 15 market spaces. Additionally, a water supply plant and a regional hospital with a 340-bed capacity are currently under construction.

Kibali also continues to lead the way in biodiversity in the DRC through its support for the Garamba National Park, one of Africa's oldest wildlife parks and a UNESCO World Heritage Site. In June 2023, with Barrick as the sole funder, 16 white rhinos were reintroduced to the park, where they had been absent for 13 years. Additionally, 64 more rhinos are planned to be reintroduced to the park in the coming years.

Over the past 13 years, Kibali has invested more than \$5 billion in the DRC, including nearly \$2.7 billion paid to local contractors and suppliers and \$1.5 billion to the government in the form of royalties, taxes and dividends. Furthermore, \$209 million has been invested in infrastructure development and community support.

The Loulo-Gounkoto complex comprises two distinct mining permits, and is situated in western Mali, bordering Senegal and adjacent to the Falamé River. The mines are owned by Barrick (80%) and the Malian government (20%).

Located in a remote area, the mine sites operate independently from the Malian national electricity grid, utilizing a mix of heavy fuel oil, diesel-powered generators and an onsite solar farm to meet their electricity needs. In line with Barrick's global commitment to increase its use of renewable energy sources in 2020, we developed a 20MW solar farm at the complex, and in 2023, we expanded the solar farm with an additional 40MW, accompanied by a 36 MVA battery energy storage system. Initially scheduled for completion by the end of 2024, we managed to advance the solar plant expansion, completing it by the end of 2023, thereby further reducing carbon emissions. The total capital cost of the project was approximately \$90 million.

As one of the world's top 10 gold producers and the largest business in terms of enterprise value in West Africa, the Loulo-Gounkoto complex achieved its 2023 production guidance while successfully replacing the gold reserves depleted by mining for the fourth successive year. In 2023, the complex's third underground mine at Gounkoto developed its first production stopes and commenced production of ore. We continue to explore new growth opportunities with the potential to deliver the next generation of major discoveries in the region.

In 2023, as part of our involvement in the local community, we built 18 schools and 78 classrooms, granted bursaries to 78 students, and repaired local roads at a total cost of around \$448,000. During 2023, the Malian operations have contributed over \$1 billion to the Malian economy in the form of taxes, royalties, dividends, salaries and payments to local suppliers, taking their lifetime contribution to approximately \$9.8 billion.

The political, security, and economic situation in Mali remains complex and challenging. Over the past 27 years, Barrick has worked tirelessly with successive governments and local partners in Mali, consistently finding solutions through open and transparent dialogue. We remain committed that the Loulo-Gounkoto complex, as one of our elite Tier One assets, will continue to make a significant contribution to the Malian economy for many years to come.

The Reko Diq project is located in the under-developed Balochistan Province of Pakistan. The project is owned 50% by Barrick, 25% by the Government of Balochistan and 25% by Pakistani state-owned enterprises. The project is operated by Barrick.

Following the reconstitution of Reko Diq in December 2022, Barrick has worked tirelessly through 2023 on the Reko Diq feasibility study with a targeted completion date at the end of 2024. The first production is expected to be in 2028. The Reko Diq project is envisaged as a conventional open pit and milling operation, producing a high-quality copper concentrate and gold. It will be constructed in two phases, and the team has commenced early works construction in 2024.

We believe that the people of Balochistan must benefit from the project well before the mine goes into production. This is being achieved through advance royalties and social development funding. In early 2023, Barrick made its first \$5 million advance royalty payment to the Government of Balochistan.

In 2023, Barrick established two Community Development Committees ("CDCs"), which are the advisory committees consisting of local stakeholders and community leaders. These CDCs identify priority projects focused on development needs such as access to education, healthcare and potable water, food security, and local economic development. The first CDC was established for the nearest local communities, and a second CDC for the nearest town of Nok Kundi. During 2023, community investment included the inauguration of 3 schools in the nearest communities, water treatment plant refurbishment and the establishment of a community health centre at Humai village and a mobile medical unit for Nokkundi with approximately 6,000 patients treated in 2023.

During its peak construction period, the Reko Diq project is expected to employ 7,500 people, and once in production it will create 4,000 long-term jobs. Central to Barrick's sustainability strategy is the localisation of its operations; therefore we prioritise local employment and work with local contractors and suppliers where possible. In response to the region's lack of schools, low attendance, and gender disparities, we have opened three primary schools near the project site. Additionally, we launched an International Graduate Program, selecting nine individuals, including four women to receive on-job training at the Veladero mine in Argentina for a period of two years before returning to Pakistan. The disciplines from which Barrick has hired include Electrical Engineering, Mechanical Engineering, Civil Engineering, Renewable Energy and Geology.

As one of the largest undeveloped copper deposits in the world, with a life of at least 40 years, the Reko Diq project has the potential to significantly boost the region's economy and local businesses in the coming decades and to become a Tier One Copper Asset.

The Jabal Sayid copper mine is located 350 kilometres north-east of Jeddah in the Kingdom of Saudi Arabia. It is a 50/50 joint venture operation between Barrick and Ma'aden, a Saudi state-owned mining company. The first shipment of copper concentrate took place in December 2015, and the mine achieved commercial production in July 2016.

Launched in April 2016 by Crown Prince Mohammed bin Salman, Saudi Arabia's Vision 2030 reform plan aims to reduce the country's dependence on oil, diversify its economy, and develop public service sectors such as health, education, infrastructure, and tourism. A primary objective of Vision 2030 is to cultivate various non-oil industries, including mining, renewable energy, and technology. In line with these goals, Saudi Arabia established the Ministry of Industry and Mineral Resources and currently estimates its mineral reserves, which include phosphate, copper, gold, and other minerals, to be worth \$2.5 trillion.⁽¹⁾ The Kingdom is actively engaging with international investors and issuing mining exploration licenses to expedite the growth of its mining industry. We have been collaborating with Saudi Arabia's largest state-owned company, Ma'aden, since 2015, and we aim to expand our activities in the region to support the Kingdom in achieving its Vision 2030 objectives.

In early 2023, Barrick signed new joint venture agreements with Ma'aden for two prospective exploration projects, comprising the Jabal Sayid South and Umm Ad Damar license areas. Throughout the year we carried out various geological, geophysical and geochemical research together with Ma'aden, aimed at determining the possible presence and quality of minerals. We hope that these new exploration projects will significantly expand Barrick's copper portfolio.

Located in a water-scarce area, the Jabal Sayid mine operates without using any groundwater, making it a zero discharge facility. The mine sources its water using treated water from the Madinah Sewage Treatment Plant. Advanced filter technology is then employed to reuse water throughout the production process. The tailings produced are dewatered using pressure filtration units, resulting in tailings with a moisture content of only 18.8%. The remaining water in the filtered tailings is a minimal 0.15m³ per tonne. Consequently, this approach significantly reduces the impact on water supply and minimises environmental risk.

In 2023, we contributed over \$319 million to the country's economy through taxes, royalties, dividends, salaries, local procurement and community investments.

(1) Reuters "Saudi Arabia ups mineral resource estimates to \$2.5 trillion -minister" by Clara Denina and Aziz El Yaakoubi 2023, and filed on SEDAR+ at www.sedarplus.ca and EDGAR at www.sec.gov on March 17, 2023.

Barrick has two operating mines in Tanzania, namely the Bulyanhulu mine and the North Mara mine.

The Bulyanhulu mine is situated in north-west Tanzania close to Lake Victoria. The mine commenced commercial production in 2001. The North Mara gold mine is located in north-west Tanzania in the Mara region. The North Mara gold mine is around 100 kilometres east of Lake Victoria and 20 kilometres south of the Kenyan border. North Mara started commercial production in 2002.

Following the conclusion of the Framework Agreement with the Tanzanian government in 2020, Barrick took over the management of the Tanzanian mines. These mines are owned through Twiga Minerals Corporation, a joint venture which is owned by Barrick (84%) and by the Tanzanian government (16%). Economic benefits from the mines are shared on a 50/50 basis between Barrick and the State.

The North Mara Gold Mine was awarded the Employer of the Year award at the prestigious 2023 Association of Tanzania Employers Awards ceremony, as well as the Overall Private Sector Employer award. Additionally, we won in five other distinguished categories at the ceremony, including Best Corporate Social Responsibility (North Mara mine), Excellence in Crisis Management (Bulyanhulu mine), second runner-up for Local Content (North Mara mine), and the esteemed title of Best Large Organisation Employer of the Year (North Mara mine).

In line with the Framework Agreement, Barrick made its first payment in April 2023, of \$10 million out of a total \$30 million towards the expansion of education infrastructure in Tanzania. Called "The Barrick-Twiga Future Forward Education Program", the goal is to build and refurbish 1,090 classrooms, 1,640 ablution blocks and 270 dormitories across 161 schools nationwide, helping to accommodate approximately 49,000 of the estimated 190,000 students who started their A-levels in July 2023. Using the first tranche of \$10 million, current projects cover 64 schools, including 396 classrooms, 97 dormitories and 600 ablution blocks.

In 2023, the North Mara mine received recognition from the Tanzanian tax authorities with awards for Substantial Taxes & Duties Paid for Exported Goods in 2022/2023 and Compliant Taxpayer in the Mining Sector for the year 2022/2023. Notably, in the preceding year, Barrick North Mara also received the esteemed Largest Taxpayer Award, further highlighting its consistent contributions and compliance in taxation.

Since taking over the two moribund mines in 2019, Barrick has transformed them into a world-class gold mining complex making a substantial contribution to its shareholders. In 2023, Twiga Minerals Corporation was recognized as the largest dividend payer among all the companies in which the government has an equity interest. Since 2019, the Barrick mines have grown into the largest contributor to the government's revenues and to the local economy, through taxes, employment, payments to local suppliers, community projects and distribution to shareholders. Since that period the mines have contributed more than \$3.4 billion to the Tanzanian economy.

The Lumwana copper mine is a conventional open pit operation, located in the North-Western province of Zambia, close to the border with the DRC — one of the most prospective copper regions in the world. The mine is 100% owned and operated by Barrick.

In 2023, we continued to undertake feasibility studies to expand the operation, which have the potential to transform the Lumwana copper mine into a Tier One Copper Asset. We plan to invest \$2 billion to increase Lumwana's annual production to an estimated 240,000 tonnes of copper from a 50 million tonne per annum processing plant over a 30-year life of mine, elevating this once-unprofitable operation into the top rank of copper producers globally.⁽¹⁾ The project's accelerated work program is targeting completion of the full feasibility study by the end of 2024, bringing expanded production expectations forward to 2028.

In 2022, Barrick launched a Business Accelerator Program designed to build the business capacity of the Zambian contractors in its supply chain, equipping them to grow and diversify their enterprises and remain sustainable beyond Lumwana's life of mine. The program takes selected Small and Medium Enterprises ("SMEs") through training in commercial and technical capabilities, preparing them for the skills required to be a credible supplier to the mine. In 2023, the first 15 SMEs completed their training and the application process has commenced for the next cohort, with a targeted intake of 150 SMEs. Barrick is also committed to local employment, with 99.3% of employees being Zambian nationals.

In 2023 two CDC projects were commissioned at Manyama high school — a science laboratory and a water reticulation system. Additionally, in partnership with Mumena Royal Establishment, we established the Mutanda abattoir that focuses on poultry production and processing.

In 2023, we contributed over \$609 million to the country's economy through taxes, royalties, salaries, local procurement and community investments. Overall, 2023 was a pivotal year for Barrick's Lumwana mine, marked by strategic investments, robust production goals, and a deepening partnership with the Zambian government. Barrick's commitment to transform Lumwana into a leading copper asset underscores our long-term vision for growth, sustainability, and economic contribution in Zambia.

⁽¹⁾ Indicative copper production profile from Lumwana, which is conceptual in nature. Subject to change following completion of the feasibility study.

OUR APPROACH TO TAX

As one of the largest gold and copper mining companies globally, Barrick acknowledges that it has substantial responsibilities to the host countries and communities in which it operates.

We therefore embrace our broader social obligations and believe that our host countries and communities should benefit from the mining activities conducted within their boundaries. In this respect, we ensure that we pay the right amount of taxes, royalties and dividends to the state.

In this section, we describe our approach to tax, covering key tax areas.

Tax governance and tax policy

We believe that effective governance is a foundation of our performance and success as a publicly traded gold and copper mining company with operations around the world. Our core values, our responsibilities and the principles and behaviors that guide how we do business are codified in our Anti-Bribery and Anti-Corruption Policy as well as our Code of Business Conduct and Ethics. Protecting ourselves from, and taking a stance against corruption, bribery and fraud is one of our sustainability principles and a foundational value.

Our President and CEO, along with senior executives from all operations discuss the Group's tax matters in our countries of operation on a weekly basis to ensure we can respond quickly to any situation in real time.

The daily management of the Group's tax matters rests with local tax directors and in-country tax teams and is supervised by the Senior Vice President, Tax and Treasury and the Senior Executive Vice-President, Chief Financial Officer who then communicate with the President and CEO. Furthermore, our President and CEO has overall responsibility for the relationships with our host governments. Our executive team reports all significant tax matters to the Audit & Risk Committee and to the Board. Additionally, tax matters are reviewed and

approved at the quarterly Audit & Risk Committee meetings and Board meetings to ensure we are compliant with the relevant laws and regulations. Our Board members have vast experience in finance, investment and law, and they oversee all tax affairs and tax policy for the Group. As one of the largest gold and copper mining companies in the world, careful tax and fiscal management is critical to our business.

Barrick's Code of Business Conduct and Ethics provides that employees may report any concerns regarding accounting, internal accounting controls or audit related matters to the General Counsel, who will communicate the concerns to the Audit & Risk Committee. In addition, Barrick's compliance hotline established in connection with the Code of Business Conduct and Ethics may be used for reporting any such concerns anonymously via telephone or web platform. Instructions for access to the compliance hotline by employees are attached to the Code of Business Conduct and Ethics and are posted on the Barrick intranet.

Tax planning and tax risk management

We interpret and apply the law giving effect to its spirit and the intention of the legislators, meaning that we consider the social and moral obligations that the legislators intended to apply. Accordingly, our tax planning is based on reasonable interpretations of the law and is aligned with the substance of our economic and business activities.

We always operate in a fair and legal framework, and we are cautious in applying the tax rules. This is of significant importance in protecting our company's reputation. Where we undertake tax planning, we do not participate in any planning that is considered aggressive, contrived, or artificial. Foremost, our tax planning is driven by business reasons rather than tax reasons, meaning that we will only enter into transactions that relate, and contribute, to Barrick's business operations and objectives.

The tax world is constantly changing, and new tax rules and interpretations of laws appear in the ordinary course. Therefore,

we monitor and manage tax risks by maintaining a team of tax professionals in our key jurisdictions who report to local and group-level management. Our local finance teams regularly participate in different finance and tax training sessions to keep their knowledge and skills current. Complicated tax matters are always reported to, and discussed with, our finance and tax executives. Furthermore, where there is significant uncertainty or complexity in relation to tax risk, we seek guidance and advice from leading tax consulting and law firms. Through this mechanism we ensure that our tax affairs and risks are understood and properly mitigated.

Relationship with tax authorities

Given the scale and complexity of our operations, we do not seek short term benefits in our host countries. All our key operations have mine lives exceeding 10 years and we need open and transparent relationships both with the tax authorities and other government bodies to be successful. It is therefore crucial for us to become the government's trusted partner so that we can work collaboratively.

In all countries where we operate, we are committed to complying with the tax law. We have never intentionally misled any government officials or attempted to conceal, alter, or destroy documents, information or records that are required to be held by law. All our taxes, royalties, and dividends to the state (when applicable) are paid in a timely manner. We promptly provide complete and accurate information and documents requested by the tax authorities during any enquiry or audit.

Taxes in the mining industry are not always clearly articulated, and where a matter is not clear or can be interpreted in more than one way, we discuss the matter internally and seek the advice of qualified tax professionals when necessary. Where appropriate, we may also discuss and seek guidance from the tax authorities. For example, for over 16 years, Barrick has been actively participating in the U.S. Compliance and Assurance Process ("CAP") program that requires us to disclose all necessary information on U.S. and global operations to the U.S. Internal Revenue Service prior to tax return filing. Over

OUR APPROACH TO TAX continued

the years, we have never received a request from the IRS for a post-audit review. Barrick has now progressed to the CAP Bridge phase, intended for taxpayers who have completed at least one Compliance Maintenance phase, have a few, if any, material issues, received a full acceptance letter in their most recent CAP program phase, and continue to satisfy the CAP eligibility and suitability requirements. The CAP Bridge Phase is usually limited to two consecutive years and then a taxpayer is back in the ordinary CAP phase. For more detailed information regarding the CAP program, please refer to our 2021 Tax Contribution Report.

Contribution to development of an effective tax system

By leveraging our experience in mining and our exposure to many countries, we occasionally approach the governments where we see opportunities for potential tax law improvements. Barrick believes that it is important to create a transparent and stable tax regime to attract foreign investments in these jurisdictions.

As a member of the EITI, we always advocate for the implementation of the EITI standards in member countries, encouraging governments to become more transparent about their sources of revenue from the extractive sector. We engage with government officials to establish a smooth process of tax data reconciliation and submission to meet the EITI requirements.

Tax disputes

Given the scale of our operations and the complexities of tax laws, disputes with tax authorities arise from time to time despite all of our policies and processes. In these cases, we always approach and try to resolve these disputes in the most transparent, efficient and fair way. Currently, we have ongoing significant fiscal disputes in the DRC, Mali and Chile. Tax disputes are an inevitable part of our work, but we believe that many of these tax assessments are without merit and we intend to defend our position vigorously. More information about tax disputes can be found in our Annual Report 2023 Note 35 on our corporate website and under Barrick's profile on SEDAR+ at www.sedarplus.ca and EDGAR at www.sec.gov.

Low-tax jurisdictions

Given the scale of our operations and our relationship with partners, we have companies located in low-tax jurisdictions. Currently, there is no unified definition of a low-tax jurisdiction and thus, for purposes of the report we first refer to the European Commission list of non-cooperative jurisdictions and secondly to the list of 'no or only nominal tax' jurisdictions published by the Organisation for Economic Co-operation and Development ("OECD") as part of its work on the framework on base erosion and profit shifting.

The European Union ("EU") is leading the world on tax transparency initiatives and is continuously working on improving tax governance. As at December 31, 2023, the EU list of non-cooperative jurisdictions for tax purposes consisted of 16 countries and is updated on a regular basis. The countries are constantly monitored for tax fraud, money laundering, tax avoidance practice, transparency and cooperation. Currently, except for two dormant companies located in Fiji, we do not have any presence in the non-cooperative jurisdictions. These Fijian companies cannot be liquidated because of certain legacy matters.

Further, the OECD list of 'no or only nominal tax' jurisdictions includes countries such as Jersey, Bahamas, Bahrain and Barbados. These jurisdictions have made commitments to the OECD to implement transparency and effective exchange of information in relation to the type of activity undertaken by companies, the number of full-time employees, and type of income. The OECD also introduced specific 'economic substance rules' to prevent profits from being shifted to these jurisdictions. The first annual information exchange started in 2021. Some of these jurisdictions have a long history of exchanging information with other countries and have taken transparency very seriously. We note that some of our companies are domiciled in the 'no or only nominal tax' jurisdictions, but our presence there is justified by economic and commercial reasons. These jurisdictions are utilised because of their well-developed company law and corporate governance rules.

In 2021, the OECD proposed a major tax reform, known as Pillar Two, aimed at introducing a global minimum tax rate. The reform requires large multinational companies with a turnover of

Tax regime for the mining sector in Egypt

Despite its rich mining history dating back to the Pharaohs, and a strategic geographic location, Egypt has historically faced limited investment in its mining sector. The country possesses a diverse range of minerals including gold, phosphate, tantalite, coal, iron ore, and heavy mineral sands, along with prospects for silver, copper, zinc, and other base metals. This lack of investment resulted in only the Sukari gold mine being operational. This limitation was partly due to the country's previous licensing system, which was better suited to the oil and gas industry than to mining.

The mining sector holds a prominent place in Egypt's Vision 2030, a transformative plan aimed at diversifying the nation's economy and promoting sustainable growth. Within this strategic framework, mining is identified as a crucial sector for development, expected to significantly contribute to the national economy, create job opportunities, and encourage technological advancements.

To achieve these goals, the Egyptian government has been working on reforming the mining sector. This includes updating policies and regulations to make them more conducive to investment and growth. The government has streamlined the process for obtaining mining licenses and has made the terms for exploration and exploitation more attractive to both local and international investors.

In 2021, Barrick's subsidiaries were granted a number of exploration licenses for the exploration of gold in the Eastern Desert. Since then, we have been in negotiations with the Egyptian government regarding new terms for gold mining licenses, in collaboration with Centamin, the operator of the Sukari gold mine. These discussions, facilitated by teams of lawyers and mineral experts, ultimately resulted in the creation of a Model Mine Exploitation Agreement ("MMEA"). This agreement marks a significant step forward in establishing a more conducive environment for mining investments in Egypt.

The MMEA outlines the fiscal terms for mining operations in the country and a shift from production sharing contracts, historically attributable to the petroleum industry, to a system of rents, royalties and taxes. Further details of the difference between the two systems are included in our 2022 Tax Contribution Report. Under the new terms, the license holder is required to pay standard corporate taxes on profits earned in Egypt. Additionally, a 5% royalty and a 15% share in the net profit of the mining operations will be paid. The agreement also encompasses commitments to workforce training and contributions to social funds, which are designed to benefit the local community. Once signed, the mine exploration license will be approved by the Egyptian Parliament.

These developments indicate a positive change in Egypt's approach to mining, aiming to unlock the sector's potential and integrate it as a key element of a diversified, robust economy in line with Egypt's Vision 2030. The goal is for mining to significantly contribute to Egypt's GDP and play a crucial role in the country's socio-economic development. We were pleased to be party to those discussions with government to achieve this goal and we are actively exploring in Egypt.

OUR APPROACH TO TAX continued

more than EUR 750 million to pay at least a minimum tax rate of 15% regardless of their global headquarters and operational locations. The Pillar Two reform was endorsed by over 130 countries.

The reform is based on two principal rules: the Income Inclusion Rule ("IIR") and the Undertaxed Payments Rule ("UTPR"). Under the IIR rule, parent companies shall compensate any shortfall in tax paid on the income generated by foreign subsidiaries if such income is subject to a tax rate below the minimum tax rate. The UTPR applies in those cases where the IIR is not applicable, ensuring taxation in those jurisdictions where the operational entities are located. The Pillar Two reform stipulates certain exemptions for a transitional period under which there is no need to apply Pillar Two calculations. There are three transitional safe harbors: simplified effective tax rate test, routine profits test, and de minimis test.

The Pillar Two rules need to be implemented in domestic tax legislation to take effect. In response, Canada, in 2023, introduced a draft, referred to as the Global Minimum Tax Act, which aligns closely with the OECD's recommended guidelines and commentaries. This legislation has not been finalized yet and it is not clear when it will come into effect.

At Barrick, we have reviewed the new rules and conducted a calculation simulation. Based on this, we believe that the Pillar Two rules will not materially impact the group.

Intra-group transactions

The Barrick Group consists of many separate legal entities established across different jurisdictions. The majority of our intra-group transactions consist of the allocation of management time and costs to our various operating subsidiaries, and intra-group finance transactions. All transactions are supported by appropriate transfer pricing documentation, which is shared with the relevant tax authorities.

We follow international tax guidance such as the OECD Transfer Pricing Guidelines or equivalent local laws. Appropriate transfer pricing documentation is prepared following the requirements of the jurisdictions where we operate. Our annual Country-by-Country report is prepared and submitted in accordance with OECD requirements to the Canadian tax authorities. Among other matters, this report includes information on revenue from related and unrelated parties, income tax paid, number of employees and business activities per country where we operate. The report can be then shared between tax authorities in those jurisdictions, subject to appropriate information exchange agreements being in place.

Our intercompany transactions are not driven by tax planning, nor do they aim to shift profits to other jurisdictions. We adhere to arm's length principles according to the OECD Transfer Pricing Guidelines and set a fair price for these transactions based on what would be paid by market participants in an arm's length transaction. Moreover, the gold mining industry is a very transparent industry as the price for gold is set by international banks and is publicly available. Hence, most of the gold value is attributed to the countries where we have active mines and not to intermediaries.

Tax incentives

Stable and competitive tax systems are one of the key considerations when choosing a jurisdiction for future investment. Therefore, many countries offer different tax incentives to companies in pursuit of foreign investment. Such investments help to boost the country's economy, employment, and social development. Where tax incentives are available for all taxpayers in the country, we review and apply them if such incentives are aligned with our business goals. As an example, the US government has introduced tax incentives for energy efficient facilities and our 200MW solar facility with battery storage project in Nevada is eligible for some of these tax incentives. We are now in the process of obtaining the required documentation for a 30% investment tax credit at a federal level and it will be reviewed and approved by the IRS CAP audit team.

In addition, we have secured a 10% credit for placing the solar array in the Eureka energy community. The Nevada state government granted further benefits in the form of a renewable energy tax abatement of property tax and sales tax. Our property tax for the solar facility will be reduced by 50% for 20 years and instead of 6.85% sales tax, we are eligible to pay 2.6% for goods and services in relation to the sales and use tax on the building of the solar facility project.

The construction will cost over \$290 million and will be financed entirely by Nevada Gold Mines. The project is in line with our commitment to reduce emissions by at least 30% by 2030 against the 2018 baseline, while maintaining a steady production profile, and to be Net Zero by 2050. Further details of the US solar panels project are included in our 2021 Tax Contribution Report and in the company's 2021 Sustainability Report.

A significant number of our operations are conducted in developing countries where a lack of stability in political frameworks sometimes results in corresponding instability of the tax rules. Given the nature of our work and significant long-term investments involved, we often operate based on concession agreements concluded with the state. Such agreements grant rights to an investor to undertake prospecting, exploration and extraction of raw minerals in a prescribed area and to conduct related work. These agreements often include provisions that provide for the stability of economic, fiscal and legal conditions over the duration of the project or for a specified period of time. Such provisions provide investors, such as Barrick, with comfort that the key legal and fiscal terms will not be unilaterally modified by the relevant host country during the agreed-upon term.

APPENDIX 1

GRI STANDARDS – GRI-207: TAX 2019

The GRI Standards are the leading standards for companies to disclose their impact on the economy, environment, and people. The GRI Standards include a specific GRI 207 standard that focuses on tax matters. This Tax Contribution Report is partially reported in line with GRI 207, as set out below:

Management Approach Disclosures		
Disclosure 207-1 Approach to tax	a. A description of the approach to tax, including: i. whether the organization has a tax strategy and, if so, a link to this strategy if publicly available; ii. the governance body or executive-level position within the organization that formally reviews and approve the tax strategy, and the frequency of this review; iii. the approach to regulatory compliance; iv. how the approach to tax is linked to the business and sustainable development strategies of the organization.	Pages 4–5 and pages 24–26
Disclosure 207-2 Tax governance, control, and risk management	a. A description of the tax governance and control framework. b. A description of the mechanisms to raise concerns about the organization's business conduct and the organization's integrity in relation to tax. c. A description of the assurance process for disclosures on tax including, if applicable, a link or reference to the external assurance report(s) or assurance statement(s).	Pages 4–5 and pages 24–26
Disclosure 207-3 Stakeholder engagement and management of concerns related to tax	a. A description of the approach to stakeholder engagement and management of stakeholder concerns related to tax, including: i. the approach to engagement with tax authorities; ii. the approach to public policy advocacy on tax; iii. the processes for collecting and considering the views and concerns of stakeholders, including external stakeholders.	Pages 4–5 and pages 24–26
Topic Specific Disclosure		
Disclosure 207-4 Country-by-country reporting	Information about revenue, revenues from third-party sales and from intra-group transactions, tax paid and accrued, employment, retained earnings, tangible assets, and activities per country.	We comply with the OECD's BEPS Action 13 Country by Country ("CbC") Reporting and submit a CbC report to the Canadian tax authorities and in other jurisdictions, as required. The reports are then exchanged with the competent authorities in jurisdictions where we operate, subject to appropriate information exchange agreements being in place. These reports include similar information to that required under Disclosure 207-4. Some of this information is also included in our annual financial statements which are publicly available and posted on our corporate website and under Barrick's profile on SEDAR at www.sedar.com and EDGAR at www.sec.gov. Following the ICMM commitment to tax disclosure, members of the ICMM will need to publicly disclose their Country-by-country data, either on the basis of GRI 207-4 or under the OECD BEPS Action 13 format, by 2025. In this report, we disclose certain information required for Disclosure 207-4 and will continue to work to include more information in future reports.

APPENDIX 2

GLOSSARY OF KEY TERMS

Arm's length principle is a valuation principle commonly applied to commercial and financial transactions between related companies, meaning that transactions should be valued as if they had been carried out between unrelated parties, each acting in its own best interest.

Base erosion and profit shifting ("BEPS") refers to tax planning strategies used by multinational enterprises that exploit gaps and mismatches in tax rules to avoid paying tax. The OECD BEPS project aims to improve the coherence of international tax rules and to ensure a more transparent tax environment.

Direct taxes are taxes directly levied on a company or on an individual, such as corporate income tax and personal income tax. These taxes cannot be transferred to another party.

Indirect taxes are taxes that can be passed on to another entity or individual, such as Value Added Tax.

A **joint venture** is a joint arrangement whereby the parties that have joint control of the arrangement have rights to the net assets of the joint venture. Our investments in joint ventures are accounted for using the equity method.

Organisation for Economic Co-operation and Development ("OECD") is an international organisation of 38 countries committed to democracy and the market economy.

OECD country by country report is required to be prepared by all large multinational enterprises. The report includes information on the global allocation of income, profit, taxes paid and economic activity among tax jurisdictions in which the company operates. The report is then shared with tax administrations in these jurisdictions, for use in high-level transfer pricing and BEPS risk assessments.

Related parties in respect of a company include its subsidiaries, joint operations, joint ventures and key management personnel.

Taxes, contributions and royalties paid are taxes and royalties as a result of the company's business activity. Included in this number are those taxes collected by the company on behalf of others.

Taxes collected on behalf of employees and other parties are those taxes collected by companies on behalf of others, for example personal income tax deducted at source, as well as withholding taxes on dividends or service providers.

Transfer pricing refers to the terms and conditions surrounding transactions within a multi-national group of companies. It concerns the prices charged between associated enterprises established in different countries for their inter-company transactions.

Cautionary Statement on Forward-Looking Information

Certain information contained or incorporated by reference in this Tax Contribution Report 2023, including any information as to our strategy, projects, plans or future financial or operating performance, constitutes “forward-looking statements”. All statements, other than statements of historical fact, are forward-looking statements. The words “believe”, “expect”, “anticipate”, “aim”, “strategy”, “target”, “plan”, “opportunities”, “guidance”, “objective”, “pursuit”, “intend”, “project”, “goal”, “continue”, “committed”, “budget”, “estimate”, “potential”, “prospective”, “future”, “focus”, “ongoing”, “following”, “subject to”, “may”, “will”, “can”, “could”, “would”, “should” and similar expressions identify forward-looking statements. In particular, this Tax Contribution Report 2023 contains forward-looking statements including, without limitation, with respect to: Barrick’s economic contributions to host governments and strategies for supporting host communities; Barrick’s sustainability vision programs, policies and performance (including regarding social and economic development, community relations and local employment and procurement); Barrick’s climate change strategy and associated greenhouse gas emissions reduction targets; the estimated timing and associated costs to achieve environmental, social and energy reduction targets, including our greenhouse gas emissions reduction targets and the potential receipt of certain investment tax credits; mine life and production rates; Barrick’s engagement with local communities; Barrick’s global exploration strategy and planned exploration activities, including in Egypt; our plans and expected completion and benefits of our growth projects, including the Lumwana super pit, Reko Diq project and Goldrush, including their respective expected timing for first production, as well as solar power and battery storage projects at Nevada Gold Mines, Kibali and Loulo-Gounkoto; the potential for each of Lumwana, Reko Diq and Porgera to reach Tier One status; the partnership between Barrick and the Government of Tanzania and implementation of the Framework Agreement; our anticipated contributions to the local economies of the jurisdictions in which we operate; and expectations regarding future price assumptions, financial performance and other outlook or guidance.

Forward-looking statements are necessarily based upon a number of estimates and assumptions including material estimates and assumptions related to the factors set forth below that, while considered reasonable by the Company as at the date of this Tax Contribution Report 2023 in light of management’s experience and perception of current conditions and expected developments, are inherently subject to significant business, economic and competitive uncertainties and contingencies. Known and unknown factors could cause actual results to differ materially from those projected in the forward-looking statements and undue reliance should not be placed on such statements and information. Such factors include, but are not limited to: risks associated with projects in the early stages of evaluation and for which additional engineering and other analysis is required; risks related to the possibility that future exploration results will not be consistent with the Company’s expectations, that quantities or grades of reserves will be diminished, and that resources may not be converted to reserves; risks associated with the fact that certain of the initiatives described in this Tax Contribution Report 2023 are still in the early stages and may not materialize; changes in mineral production performance, exploitation and exploration successes; risks that exploration data may be incomplete and considerable additional work may be required to complete further evaluation, including but not limited to drilling, engineering and socioeconomic studies and investment; the speculative nature of mineral exploration and development; lack of certainty with respect to foreign legal systems, corruption and other factors that are inconsistent with the rule of law; changes in national and local government legislation, taxation, controls or regulations and/or changes in the administration of laws, policies and practices, including the potential impact of proposed changes to Chilean law on the status of value-added tax (“VAT”) refunds received in Chile in connection with the development of the Pascua-Lama project; expropriation or nationalization of property and political or economic developments in Canada, the United States and other countries in which Barrick does or may carry on business in the future; risks relating to political instability in certain of the jurisdictions in which Barrick operates; timing of receipt of, or failure to comply with, necessary permits and approvals; non-renewal of key licenses by governmental authorities; failure to comply with environmental and health and safety laws and regulations; increased costs and physical and transition risks related to climate change, including extreme weather events, resource shortages, emerging policies and increased regulations relating to related to greenhouse gas emission levels, energy efficiency and reporting of risks; the Company’s ability to achieve its sustainability goals, including its climate-related goals and GHG emissions reduction targets, in particular its ability to achieve its Scope 3 emissions targets which requires reliance on entities within Barrick’s value chain, but outside of the Company’s direct control, to achieve such targets within the specified time frames; the liability associated with risks and hazards in the mining industry, and the ability to maintain insurance to cover such losses; damage to the Company’s reputation due to the actual or perceived occurrence of any number of events, including negative publicity with respect to the Company’s handling of environmental matters or dealings with community groups, whether true or not; risks relating to operations near communities that may regard Barrick’s operations as being detrimental to them; litigation and legal and administrative proceedings; operating or technical difficulties in connection with mining or development activities, including geotechnical challenges, tailings dam and storage facilities failures, and disruptions in the maintenance or provision of required infrastructure and information technology systems; increased costs, delays, suspensions and technical challenges associated with the construction of capital projects; risks associated with working with partners in jointly controlled assets; risks related to disruption of supply routes which may cause delays in construction and mining activities, including disruptions in the supply of key mining inputs due to the invasion of Ukraine by Russia and conflicts in the Middle East; risk of loss due to acts of war, terrorism, sabotage and civil disturbances; risks associated with Barrick’s infrastructure, information technology systems and the implementation of Barrick’s technological initiatives, including risks related to cybersecurity incidents, including those caused by computer viruses, malware, ransomware and other cyberattacks, or similar information technology system failures, delays and/or disruptions; the impact of global liquidity and credit availability on the timing of cash flows and the values of assets and liabilities based on projected future cash flows; the impact of inflation, including global inflationary pressures driven by ongoing global supply chain disruptions caused by the ongoing Covid-19 pandemic, global energy cost increases following the invasion of Ukraine by Russia and country-specific political and economic factors in Argentina; risks relating to exchange and capital controls; fluctuations in the currency markets; the ability of Barrick’s management to implement its business strategy and enhanced political risk in certain jurisdictions; whether benefits expected from recent transactions are realized; business opportunities that may be presented to, or pursued by, the Company; our ability to successfully integrate acquisitions or complete divestitures; risks related to competition in the mining industry; employee relations including loss of key employees; availability and increased costs associated with mining inputs and labor; and risks associated with diseases, epidemics and pandemics, including the effects and potential effects of the global Covid-19 pandemic. In addition, there are risks and hazards associated with the business of mineral exploration, development and mining, including environmental hazards, industrial accidents, unusual or unexpected formations, pressures, cave-ins, flooding and gold bullion, copper cathode or gold or copper concentrate losses (and the risk of inadequate insurance, or inability to obtain insurance, to cover these risks). Many of these uncertainties and contingencies can affect our actual results and could cause actual results to differ materially from those expressed or implied in any forward-looking statements made by, or on behalf of, us. Readers are cautioned that forward-looking statements are not guarantees of future performance.

All of the forward-looking statements made in this Tax Contribution Report 2023 are qualified by these cautionary statements. Specific reference is made to the most recent Form 40-F/Annual Information Form on file with the SEC and Canadian provincial securities regulatory authorities for a more detailed discussion of some of the factors underlying forward-looking statements and the risks that may affect Barrick’s ability to achieve the expectations set forth in the forward-looking statements contained in this Tax Contribution Report 2023.

We disclaim any intention or obligation to update or revise any forward-looking statements whether as a result of new information, future events or otherwise, except as required by applicable law.
