We compare the year-over-year change in revenue excluding the effect of acquisitions and divestitures and foreign currency rate fluctuations to assess the performance of our underlying business.

<sup>(a)</sup> All numbers were updated to reflect the movement of the chemistries and supplies business and remarketed instruments business from our Agilent Crosslab business segment to our Life Sciences and Applied Markets business segment and the movement of service revenue and cost of sales related to the acquisition of BioTek from our Life Sciences and Applied Markets business segment to our Agilent CrossLab business segment.

<sup>(b)</sup> The constant currency year-over-year growth percentage is calculated by recalculating all periods in the comparison period at the foreign currency exchange rates used for accounting during the last month of the current quarter and then using those revised values to calculate the year-over-year percentage change.

<sup>(c)</sup> The dollar impact from the quarterly currency impact is equal to the total year-over-year dollar change less the constant currency year-over-year change.

We compare the year-over-year change in revenue excluding the effect of acquisitions and divestitures and foreign currency rate fluctuations to assess the performance of our underlying business.

<sup>(a)</sup> All numbers were updated to reflect the movement of the chemistries and supplies business and remarketed instruments business from our Agilent Crosslab business segment to our Life Sciences and Applied Markets business segment and the movement of service revenue and cost of sales related to the acquisition of BioTek from our Life Sciences and Applied Markets business segment to our Agilent CrossLab business segment.

<sup>(b)</sup> The constant currency year-over-year growth percentage is calculated by recalculating all periods in the comparison period at the foreign currency exchange rates used for accounting during the last month of the current quarter and then using those revised values to calculate the year-over-year percentage change.

<sup>(c)</sup> The dollar impact from the quarterly currency impact is equal to the total year-over-year dollar change less the constant currency year-over-year change.

We compare the year-over-year change in revenue excluding the effect of acquisitions and divestitures and foreign currency rate fluctuations to assess the performance of our underlying business.

<sup>(a)</sup> All numbers were updated to reflect the movement of the chemistries and supplies business and remarketed instruments business from our Agilent Crosslab business segment to our Life Sciences and Applied Markets business segment and the movement of service revenue and cost of sales related to the acquisition of BioTek from our Life Sciences and Applied Markets business segment to our Agilent CrossLab business segment.

<sup>(b)</sup> The constant currency year-over-year growth percentage is calculated by recalculating all periods in the comparison period at the foreign currency exchange rates used for accounting during the last month of the current quarter and then using those revised values to calculate the year-over-year percentage change.

<sup>(c)</sup> The dollar impact from the quarterly currency impact is equal to the total year-over-year dollar change less the constant currency year-over-year change.

We compare the year-over-year change in revenue excluding the effect of recent acquisitions and divestitures and foreign currency rate fluctuations to assess the performance of our underlying business.

<sup>(a)</sup> All numbers were updated to reflect the movement of the chemistries and supplies business and remarketed instruments business from our Agilent Crosslab business segment to our Life Sciences and Applied Markets business segment and the movement of service revenue and cost of sales related to the acquisition of BioTek from our Life Sciences and Applied Markets business segment to our Agilent CrossLab business segment.

<sup>(b)</sup> The constant currency year-over-year growth percentage is calculated by recalculating all periods in the comparison period at the foreign currency exchange rates used for accounting during the last month of the current quarter and then using those revised values to calculate the year-over-year percentage change.

<sup>(c)</sup> The dollar impact from the annual currency impact is equal to the total year-over-year dollar change less the constant currency year-over-year change.
